Re: Phase I Environmental Site Assessment Report Submittal
Blackrock Land Exchange: Disposal of Federal Land
Bannock and Power Counties, Idaho

Dear Wendy:

We are pleased to provide you with the above-referenced Phase I Environmental Site Assessment (ESA) report. The attached report presents our methodology, findings, opinions, conclusions, and recommendations regarding environmental conditions at the project site.

HDR appreciates the opportunity to serve the J.R. Simplot Company on this important project. If you have any questions or comments, please feel free to contact me at 208-387-7033 or mike.murray@hdrinc.com.

Sincerely,

HDR ENGINEERING, INC.

Summary

HDR Engineering, Inc. (HDR) conducted a Phase I Environmental Site Assessment (Phase I ESA) of approximately 719 acres of Federal land managed by the U.S. Department of the Interior Bureau of Land Management (BLM) that extends from Power County to Bannock County, in Pocatello, Idaho. The Phase I ESA has been prepared for J.R. Simplot Company (Simplot) and BLM for Federal land being considered for exchange under the Blackrock Land Exchange. The proposal involves exchange of the approximately 719 acres of Federal land adjacent to the Don Plant for approximately 667 acres of non-Federal land currently owned by Simplot. Simplot has proposed as mitigation an additional 159 acres of non-Federal, Simplot-owned land that would be conveyed to BLM.

The property, referenced herein as the Project Area, consists of approximately 719 acres of Federal land proposed for exchange under the Blackrock Land Exchange. Refer to the project location map and site detail map (**Figure 1** and **Figure 2**) for further detail.

This Phase I ESA focuses on the Federal land (Project Area) that would be disposed of in exchange for non-Federal land. An assessment of the non-Federal land is available under different cover (*Phase I Environmental Site Assessment, Blackrock Land Exchange: Pre-acquisition of Non-Federal Land*, HDR 2019).

This Phase I ESA assessed for the presence of recognized environmental conditions (RECs) that may adversely affect the project area, and was conducted in accordance with the scope and limitations of the ASTM International (ASTM) Practice E1527-13. In addition, the Phase 1 ESA follows the requirements of BLM's H-2000-02 Environmental Site Assessments for Disposal of Real Property (Release 2-229, August 21, 2012). This report includes a summary of the site reconnaissance conducted on June 11, a review of environmental databases, a review of historical data sources, environmental lien search, and personal interviews. Any exceptions to or deletions from these ASTM and BLM practices are described later in this report.

Findings

General findings of this assessment include the following:

- The Project Area is Federal land proposed for exchange in the Blackrock Land Exchange project, in Bannock and Power counties near Pocatello and Inkom, Idaho. The land around the Project Area consists of a mix of industrial, residential, public, and tribal uses. Fort Hall Reservation belonging to the Shoshone-Bannock Tribes dominates the area west of the Project Area. Immediately north of much of the Project Area is the Eastern Michaud Flats (EMF) site. The EMF site is a Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) regulated Superfund site comprised of Simplot's Don Plant facility and the previous FMC Corporation (FMC) phosphorus plant.

- Review of government records and historical sources identified the Project Area as part of the EMF Superfund site, characterized as the Offplant Operating Unit (OU). Elevated levels of some metals and inorganics have been identified in surface soils. Elevated fluoride has been identified in vegetation. Superfund risk assessment identified no human health risk and

marginal ecological risk due to fluoride in vegetation. No remedial action has been proposed by U.S. Environmental Protection Agency (EPA) for the Project Area.

- The Project Area at latitude/longitude 42.877/-112.521 is identified as the Pocatello Moving Target Range in the Formerly Used Defense Site (FUDs) database (program ID: F101D0119). The same location is also listed in the unexploded ordnance (UXO) database. The FUDS are properties were (are) Federal lands that were used by the Department of Defense (DOD). The FUDs database was established in 1986 for assessment, and if cleanup was deemed necessary, it was led by the U.S. Army Corps of Engineers (Corps). UXOinfo.com site list the site as a FUDS site but indicates that the history as “no data available.” HDR obtained records from the Corps regarding the Pocatello Moving Target Range (Appendix E). The range was used by the War Department in 1943 and 1944 as a moving target range over a 4,494-acre area (the exact locations remains uncertain but it included current day BLM-managed land in the Pocatello area, and likely included the Project Area). Inspections were conducted in 1991, no hazards were identified. The Corps concluded, “since no hazardous or toxic waste was discovered, this site is recommended for no further action”.

- In 2013, Simplot had a release of gypsum from a diked area and some gypsum entered onto BLM land near the southern end of the gypstack. Simplot reported the release and IDEQ oversaw the cleanup of the material. IDEQ considers the release mitigated.

Opinions

HDR has reviewed the stated data sources, which are part of the ASTM E 1527-13 assessment protocol. Based upon the review of the data, HDR has developed the following professional opinion:

- The Project Area is located within the Offplant OU of the EMF Superfund site. The record of decision (ROD) identifies the measures to be taken by Simplot and FMC to address site impacts, including the Offplant OU. No remedial action has taken place in the past, nor has been proposed for the Federal lands, including the Project Area. This portion of the Project Area is considered a CREC.

- The area around latitude/longitude 42.877/-112.521 is listed in the FUDs database and is not considered a REC based on information provided by the Corps (see Appendix E).

- The release of gypsum form a diked are onto the Project Area has been mitigated and is not considered a REC.

Conclusions

HDR has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527.13 and BLM Manual Handbook H-2000-02 for the Project Area. Any exceptions to, or deletions from, this practice are described in Section 11.0 of this report. This assessment has revealed no evidence of RECs in connection with the property, except for the following:

- The Project Area is located within the Offplant OU of the EMF Superfund site. The ROD identifies the measures to be taken by Simplot and FMC to address site impacts, including the Offplant OU. No remedial action has taken place in the past, nor has been proposed for

the Federal lands, including the Project Area. This portion of the Project Area is considered a CREC.

Recommendations

Recommendations included in this report were developed through the investigative procedures described in the Scope of Services, Significant Assumptions, and Limitations sections of this report (see Section 1.2). These findings should be reviewed within the context of the limitations provided in the Limitations section.

HDR makes following recommendations:

Recommendation 1

This assessment has revealed no evidence of hazardous substances, petroleum products, or recognized environmental conditions and/or CERCLA 120(h) concerns on this real property. No further inquiry is needed for purposes of appropriate inquiry; therefore, this real property is suitable for disposal.

Recommendation 2

Report users should consider the “shelf life” of Phase I documents in determining risk. ASTM E 1527-13: 4.6 states that a conforming “Phase I” report is valid for a period of 180 days, and may be updated during the 180 days to 1-year timeframe. The report is valid for use in any of the CERCLA defenses ONLY if it is updated within this time frame. If greater than one year passes from the final report date, the Phase I effort would need to be repeated to remain in compliance with ASTM and the “All Appropriate Inquiry” (AAI) protection.

1.0 Introduction

1.1 Purpose

The purpose of this Phase I environmental site assessment (Phase I ESA) is to document the evaluation of the project lands for indications of recognized environmental conditions (RECs). ASTM International (ASTM) Practice E 1527-13 defines the following categories of REC:

REC: The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions (see definition below).

ASTM E 1527-13 defines release as a release of any hazardous substance or petroleum product shall have the same meaning as the definition of "release" in Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), 42 United States Code (U.S.C.) § 9601(22)).

Historical REC (HREC): A past release of any hazardous substances or petroleum products that has occurred in connection with the property, and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority. The property is not subject to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Controlled REC (CREC): A REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as documented by the issuance of a No Further Action [NFA] letter or equivalent, or meeting risk-based criteria established by the regulatory authority). Hazardous substances or petroleum products are allowed to remain in place, subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Additional conditions that are not included under the definitions of a REC, but are defined by ASTM Practice E 1527-13 include:

De minimis: A condition that generally does not present a threat to human health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not RECs, historical RECs nor CRECs.

Business Environmental Risk: A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.

Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.

In addition the ASTM defined RECs, the Phase 1 ESA includes addressing solid waste and physical hazards issues. Where BLM defines physical hazards are (BLM 2012):

> *Man-caused situations, such as mine shafts, high walls, unsafe bridges, primitive roads, or similar features, where the potential exists for injury or death to visitors on the lands before the disposal is completed.*

It is BLM policy that locations of sites must be identified on site maps, a detailed description be provided, and photo documentation be included in the ESA report.

1.2 Scope of Services, Significant Assumptions, and Limitations

The services provided for this project consisted of the following:

- Provide a description of the Project Area, including current land uses (Section 2.1 – 2.3)
- Provide a general description of the topography, soils, geology, and groundwater flow direction (Section 2.4)
- Review reasonably ascertainable and reviewable regulatory information published by Federal, state, local, and tribal, environmental agencies pertaining to the Project Area (Section 4.0 in total)
- Review historical data sources for the Project Area, including aerial photographs, topographic maps, fire insurance maps, city directories, and other readily available development data (Section 4.3 in total)
- Conduct an area reconnaissance and an environmental review—including a visual review of adjoining properties—with a focus on indications of hazardous substances, petroleum products, polychlorinated biphenyls (PCBs), wells, storage tanks, solid waste disposal pits and sumps, and utilities. In addition review site for physical hazards as defined above (Section 5.0 in total)
- Interview current owner of the Project Area and interview other persons with knowledge of the development history of the Project Area (Section 6.0 in total)
- Determine deviations in methodology that results in data gaps in the information obtained and comment on their significance in identifying RECs for the Project Area (Section 13.0)
- Prepare a written report of methods, findings, opinions and conclusions (Sections 9.0, 10.0, and 11.0 in total).

The goal of this scope of services is to assist the user in identifying conditions in the project area that may indicate risks regarding hazardous materials storage, disposal, or other impacts. The resulting report may qualify the user for relief from liabilities as one of three “defenses” identified in the 2002 Brownfields Amendments to CERCLA, Section 9607 (All Appropriate Inquiry [AAI] subsections). These three defenses include:

1. The “innocent landowner” defense to potential liabilities under 42 U.S.C. § 9601
2. The “contiguous project corridor owner” defense pursuant to 42 U.S.C. § 9607q
3. The “bona fide prospective purchaser” defense pursuant to 42 U.S.C. §9607r

Federal regulations at (42 U.S.C §9601(35)(A) & (B),§9607(b)(3), §9607(q); and §9607(r)), promulgated by the United States (U.S.) Environmental Protection Agency (EPA), require that liability release be based (in part) on completion of AAI prior to purchase of a property. Those inquiries are documented by Phase I reports, or ESAs. EPA has agreed that the recently developed ASTM guidance (ASTM Practice E 1527-13: 3.2.6) specifies and interprets AAI requirements.

A user is defined by ASTM Practice E 1527-13: as the party seeking to use Practice E 1527 to complete an ESA of the project area and may include a potential purchaser of land in the project area, a potential tenant of the Project Area, an owner of land in the project area, a lender, or a project area manager. Investigative areas not included in the standard ASTM ESA scope include: asbestos, lead-based paint, lead in drinking water, radon or urea formaldehyde, wetland issues, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, and high voltage power lines.

Indoor air quality from sources such as mold and asbestos is not included in the ASTM standard except to the extent that indoor air impacts are related to Superfund release and/or caused by releases of hazardous substances into subsurface soil or groundwater (vapor intrusion).

The potential for vapor encroachment or intrusion into structures in the Project Area are assessed from on-site or off-plant sources, based on the experience of the Environmental Professional. State and national policies and standards relevant to vapor intrusion are in flux, and subject to change.

The scope of services for ESA projects also does not include the completion of soil borings, the installation of groundwater monitoring wells, or the collection of soil or groundwater samples.

HDR has made certain assumptions in preparing the scope of this assessment:

- Data gathered from public information sources (i.e., libraries or public regulatory agencies) are accurate and reliable.
- Site operations reflect site conditions relative to potential releases, and no intentional concealment of environmental conditions or releases has occurred.
- Interview information is directly reported as gathered by the assessor, and is limited by the accuracy of the interviewee's recollection and experience.
- Published geologic information and site observations made by the environmental professional are used to estimate likely contaminant migration pathways in the subsurface. These estimates by the environmental professional are limited in accuracy, and are generally cross-referenced with existing information about similar sites and environmental releases in the area, if available.
- Regulatory information is limited to sites identified after the late 1980s, because reliable records were not kept by regulatory agencies prior to that time frame.

The findings and conclusions presented in this report are based on the procedures described in ASTM Practice E 1527-13, informal discussions with various agencies, a review of the available literature cited in this report, conditions noted at the time of this Phase I ESA, and HDR's interpretation of the information obtained as part of this Phase I ESA. The findings and conclusions are limited to the specific project and properties described in this report, and by the accuracy and completeness of the information provided by others.

An ESA cannot entirely eliminate uncertainty regarding the potential for RECs. Conducting this assessment is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a project area within reasonable limits of time and cost. In conducting its services, HDR used a degree of care and skill ordinarily exercised under similar circumstances by reputable members of its profession practicing in the same locality. This Phase I ESA conforms to the level of documentation required in ASTM Practice E 1527-13. However, HDR may omit discussion of certain records, i.e., sources deemed, in HDR's professional opinion, to be inapplicable, or of limited value, to the specific needs of the client. However, in accordance with ASTM, if the lack of available documentation results in a data gap, this data gap is identified and its significance is discussed.

1.3 User Reliance

HDR Engineering, Inc. (HDR) received authorization from both the J.R. Simplot Company (Simplot) and the U.S. Department of the Interior Bureau of Land Management (BLM) to conduct a Phase I ESA of the Project Area. The Project Area is defined as the Federal land, located in both Bannock and Power counties, Idaho, proposed for exchange from the BLM for non-Federal lands. This Phase I ESA has been prepared for Simplot and the BLM and only these two entities have the right to rely on the contents of this Phase I ESA without written authorization.

This Phase I ESA focuses on the Federal land (Project Area) that would be disposed of in exchange for non-Federal land. An assessment of the non-Federal land is available under different cover (*Phase I Environmental Site Assessment, Blackrock Land Exchange: Pre-acquisition of Non-Federal Land*, HDR 2019).

2.0 Site Description

2.1 Location and Legal Description

The Project Area is described as the Federal land, comprised of one full parcel and portions of three additional parcels of BLM land, proposed for exchange in the Blackrock Land Exchange project, in Bannock and Power counties near Pocatello and Inkom, Idaho. **Table 1** lists the Project Area Federal land.

The Project Area, comprised of approximately 719.6 acres, is an irregularly-shaped, but contiguous block of land that extends through sections 17, 19, 20, and 30 in Township 6 South, Range 34 East (T6S, R34E) in both Bannock and Power counties, near Pocatello. Refer to the project vicinity map for the locations of both the Project Area and the non-Federal land proposed for exchange, and the detail map of the Project Area (**Figure 1** and **Figure 2**) for further site location details.

Table 1 – Description of Blackrock Land Exchange Federal Parcels

Federal Land Requested in Exchange for Non-Federal Land			Acres per Section
	Parcel ID*	**Township 6 South, Range 34 East**	
Bannock County	No parcel ID (full parcel)	Section 17: W½ NW¼, W½ SW¼	169.28
	No parcel ID (partial parcel)	Section 20: NW¼ NW¼	40.86
Power County		**Township 6 South, Range 34 East**

	RPD0419-04 (partial parcel)	Section 30: N½ NE¼ NW¼, N½ NW¼ NE¼	41.20
		Total	**719.58**

* Parcel IDs and acreages per Bannock County Assessor's website: https://bannock.maps.arcgis.com/apps/webappviewer/index.html?id=dfe86cb077844d8f8b68ba01ac6f7087 and Power County Assessor's website: http://idahoparcels.us:8060/gm3/desktop/power.html#on=sketch/default;scalebar_feet/scalebar_feet;parcels/parcels;boundry/boundry;openstreetmap/osm_mapnik&loc=152.8740565703525;-12562119;5279180

2.2 Site and Vicinity Characteristics

The Project Area is located west of Pocatello, Idaho in both Power and Bannock counties, on the northwest side of Howard Mountain (**Figure 2**). Howard Mountain is located in a boundary area between the Eastern Snake River Plain and the Bannock Range. Terrain is steep and mountainous, with soils ranging from shallow and rocky to deep and well drained. Elevations in this area range from 4,400 to 6,500 feet above mean sea level. Vegetation consists mainly of native shrub steppe type, with minimal juniper.

2.1 Area Geology and Hydrogeology

The Project Area is located at the northern end of the Bannock Range, at the Snake River Plain boundary. Pleistocene terrace deposits are present locally to elevations of 5,400 feet. Boulder gravels with interbedded silt and sand are present along the Portneuf Valley. The Portneuf River drainage was part of the Bear River drainage prior to 500-600,000 years ago. Approximately 15,500 years ago, a flood event from Lake Bonneville flowed northward down the Portneuf River drainage onto the Snake River Plain. Deposits of Starlight and Salt Lake Formations often underlie these terrace deposits and are exposed within and at the perimeter of the mountain ranges. In the Pocatello area, the Starlight Formation consists of fluvially-deposited tuff, ash-flow tuff, basalt, and breccia or conglomerate.

The Project Area receives approximately 12 inches of mean annual precipitation. Most of the precipitation occurs from March to May, with secondary peaks occurring during November and December. Temperatures in the region range from a mean daily low of 14.4 degrees Fahrenheit (°F) in January to a mean daily high of 88.0 °F in July.

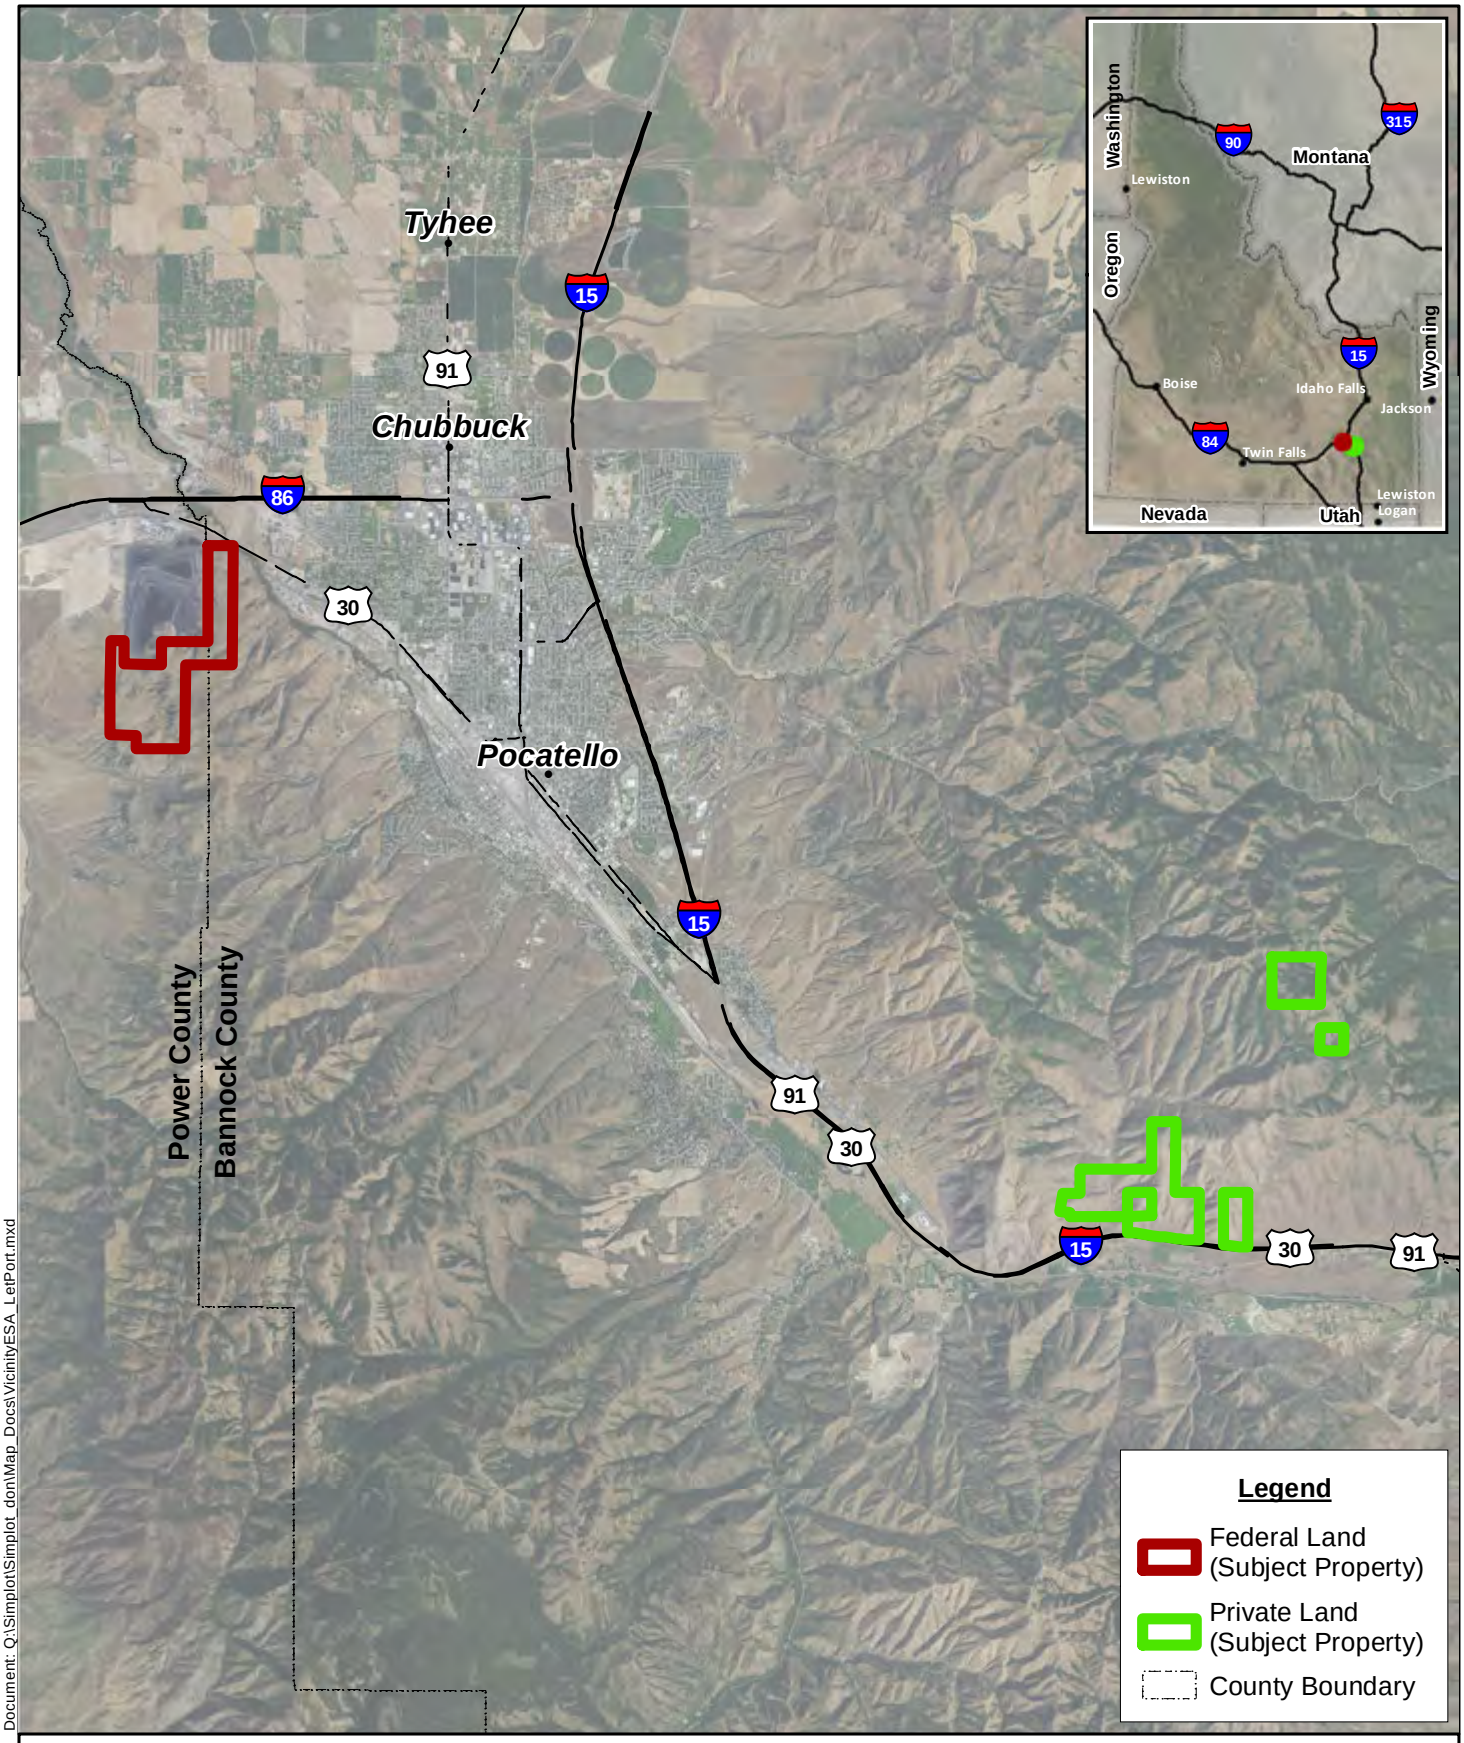

Shallow groundwater flow direction in the area follows the contours of the terrain and moves toward the Portneuf River. Groundwater contour maps for the Eastern Michaud Flats (EMF) Superfund site show groundwater north of the Project Area to flow in a northerly direction (similar to the terrain) and toward the Portneuf River.

2.2 Current Use of Property and Adjoining Properties

The land around the Project Area consists of a mix of industrial, residential, public and tribal uses. Fort Hall Reservation belonging to the Shoshone-Bannock Tribes dominates the area west of the Project Area. Immediately north of much of the Project Area is the EMF site. Simplot's Don Plant facility, which is directly north of the EMF site, is bordered to the north by both U.S. Highway 30 (US-30) and Interstate 86 (I-86). North of the interstate are several industrial and retail facilities, including Mickelsen Construction, Tesoro Logistics, Rowland RV and Boat Storage, and Idaho Rock and Sand. Undeveloped BLM land borders the Project Area to the south and southeast. A mix of BLM and non-Federal land is directly east as is Portneuf River. North of the river, sandwiched between US-30 to the south and I-86 to the north is a residential area.

2.3 Description of Structures, Roads, and Other Site Improvements

The Project Area is undeveloped and does not contain structures. Some fences exist in the areas, but the main site improvements are comprised of unpaved roads. For the Project Area, unpaved road runs north-south through Section 17 of the area, crosses Section 20 of the area, and runs into Section 19. The nearest paved road to the Project Area is US-30 to the north.

3.0 User Provided Information

The users of the report are Simplot and BLM. As part of the all appropriate inquiry, the user has the following investigatory responsibilities:

- Providing searches for recorded environmental cleanup liens
- Reporting specialized knowledge of the subject property
- Evaluating the relationship of the purchase price to the value of the property, if not contaminated

BLM has indicated that no environmental cleanup liens are filed or recorded against the Project Area (Federal land). However, a portion of this land is considered to be part of the off-site operable unit associated with the EMF Superfund site. This issue is discussed in further detail in Section 4.3.6. Simplot has provided information including specialized knowledge and experience related to the Federal land, including the record of decision (ROD) for their portion of the EMF Superfund site.

4.0 Records Review

4.1 EDR Database Search Results

HDR contracted Environmental Data Resources, Inc. (EDR) to complete a database search of Federal, state, and tribal environmental records for the Project Area. EDR performed the computerized search for the Project Area on May 30, 2019. The databases included Federal, state, local, and tribal databases as defined by ASTM E 1527-13, plus EDR proprietary databases as research aids. The results of the database search are summarized in **Table 2** and the following paragraphs. A complete copy of the EDR environmental database report is included in Appendix A.

Table 2 – Summary of Environmental Database Search Results

Database	Description	Listings in Project Area Land Search Radius	Listings of Concern to the Project Area
FEDERAL ASTM STANDARD			
ECHO	Enforcement & Compliance History Information. ECHO provides integrated compliance and enforcement information for about 800,000 regulated facilities nationwide.	1	0
Financial Assurance	Financial assurance information for underground storage tank facilities. Financial assurance is intended to ensure that resources are available to pay for the cost of closure, post-closure care, and corrective measures if the owner or operator of a regulated facility is unable or unwilling to pay.	1	0

Database	Description	Listings in Project Area Land Search Radius	Listings of Concern to the Project Area
FINDS	Facility Index System. FINDS contains both facility information and pointers to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).	1	0
LEAD SMELTERS	A listing of former lead smelter sites.	1	1 (EMF)
NPL	The National Priorities List (NPL) is the U.S. EPA's database of uncontrolled or abandoned hazardous waste facilities that have been listed for priority remedial actions under the Superfund program.	1	1 (EMF)
PRP	Potentially Responsible Parties. EPA's listing of PRPs.	1	1 (EMF)
RCRA-CESQG	RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.	1	0
ROD	Records of Decision mandating a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.	1	1 (EMF)
SEMS	SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the EPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites that are either proposed to or on the National Priorities List (NPL) and the sites that are in the screening and assessment phase for possible inclusion on the NPL.	1	1 (EMF)
US ENG Controls	A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.	1	1 (EMF)

Database	Description	Listings in Project Area Land Search Radius	Listings of Concern to the Project Area
US INST Controls	A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.	1	1 (EMF)
US MINES	Active Mines and Mineral Processing Plant operations for commodities monitored by the Minerals Information Team of the U.S. Geological Survey (USGS).	1	0
UXO	A listing of unexploded ordnance site locations.	1	1 (Subject Area)
STATE and LOCAL ASTM STANDARD			
ALLSITES	Idaho's remediation database is a compilation of data on all the state and delegated federal remediation programs operated by the DEQ. Programs included are AST, Brownfield, Emergency Response (ER), General Remediation, LUST, Mining, Miscellaneous, RCRA, Solid Waste, UST and voluntary cleanup program (VCP).	6	1 (Subject Area)
LUST	Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents.	2	0
UST	The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the RCRA. The data come from IDEQ's Registered USTs in Idaho list.	4	0
TRIBAL			
INDIAN RESERV	Map of Indian administered lands that have an area equal to or greater than 640 acres.	1	0

HDR reviewed the listings identified within the database search area. Listings or sites of potential concern to the Project Area are identified in the last column of **Table 2** and described in further detail in the following bullets.

The EDR search of Federal, state, local, and tribal databases returned two properties that HDR identifies as potential concerns. The first is identified within the Project Area and the second is the adjacent EMF Superfund Site. Both are further described below.

4.1.1 Pocatello Moving Target Range

The Project Area at latitude/longitude 42.877/-112.521 is identified as the Pocatello Moving Target Range in the Formerly Used Defense Site (FUDs) database (program ID: F101D0119). The same location is also listed the unexploded ordnance (UXO) database. No other information is provided in the EDR database. The FUDS were (are) Federal lands that were utilized by the Department of Defense (DOD). The FUDs database was established in 1986 for assessment, and to determine if cleanup was necessary. Assessment and cleanup activities are led by the U.S. Army Corps of Engineers (Corps). UXOinfo.com list the site as a FUDS site but indicates that the history as "no data available." The BLM has no records about the FUDs activities (Anderson 2019). HDR obtained records from the Corps (provide through the IDEQ Pocatello office) regarding the Pocatello Moving

Target Range (Appendix E). The land was used by the War Department in 1943 and 1944 as a moving target range over a 4,494 acre area (the exact locations remains uncertain but it included current day BLM managed land in the Pocatello area, and likely included the Project Area). Inspections were conducted in 1991 by the Corps, no hazards were identified. The Corps concluded, "since no hazardous or toxic waste was discovered, this site is recommended for no further action."

4.1.2 Eastern Michaud Flats (EMF) Superfund Site

The EMF Superfund site is listed in seven databases (NPL, SEMS, US ENG CONTROLS, US INST CONTROL, ROD, PRP, and LEAD SMELTERS). Located mostly north and adjacent to the Project Area, it includes a former elemental phosphorus processing plant (former Astaris [also known as FMC Corporation] Elemental Phosphorus Plant) and the active Simplot Don Plant that manufactures phosphate fertilizer. See Section 4.3.6 for additional information.

4.1.3 Other EDR Listed Sites

The remaining listings were not of concern to the Project Area based on factors such as distance, hydraulic gradient, geology, or clean-up status.

No sites were listed in the orphan summary (unmappable sites due to insufficient address information) listed the following sites within the buffer zone, adjacent to the Project Area.

4.2 Additional Regulatory Information

4.2.1 Online Sources

Using the Idaho Department of Environmental Quality's (IDEQ) online Waste Management and Remediation Division Facility Mapper (http://www.deq.idaho.gov/waste-mgmt-remediation/remediation-activities/facility-mapper/), HDR searched for the Project Area on July 11, 2019, and found the FUD listing consistent with the EDR report (see Section 4.1.1). No other listings were found for the Project Area. The adjacent EMF site was listed, consistent with the EDR report.

4.2.2 Agency File Reviews

See Section 4.2.1.

4.2.3 BLM Records

See Section 6.0 for interview with BLM personnel regarding BLM's knowledge and records of the Project Area.

4.3 Historical Use Information

The objective of reviewing historical use information is to develop a history of previous land uses at and in the vicinity of the Project Area, and to assess these uses for potential hazardous materials impacts that may affect the Project Area. HDR reviewed those historical sources that were reasonably ascertainable and likely to provide useful information, as defined by the ASTM standard.

4.3.1 Fire Insurance Maps

The Project Area is undeveloped land with no physical address. There is no Sanborn® Fire Insurance Maps coverage.

4.3.2 Historical Aerial Photographs

Historical aerial photographs are valuable for the environmental assessor to review features of the Project Area and surrounding properties over a long period of time. HDR reviewed historical aerial photographs of the Project Area provided by EDR (Appendix B) for the following years: 1953, 1969, 1974, 1980, 1985, 1993, 2004, 2009, 2013, and 2017. EDR provided two photos per each year of coverage to ensure coverage of the entire area. The photo with the suffix "_1" is focused on the area immediately north of the Project Area. The photo with the suffix "_2" is focused on the Project Area itself. **Figure 3** illustrates photographic coverage.

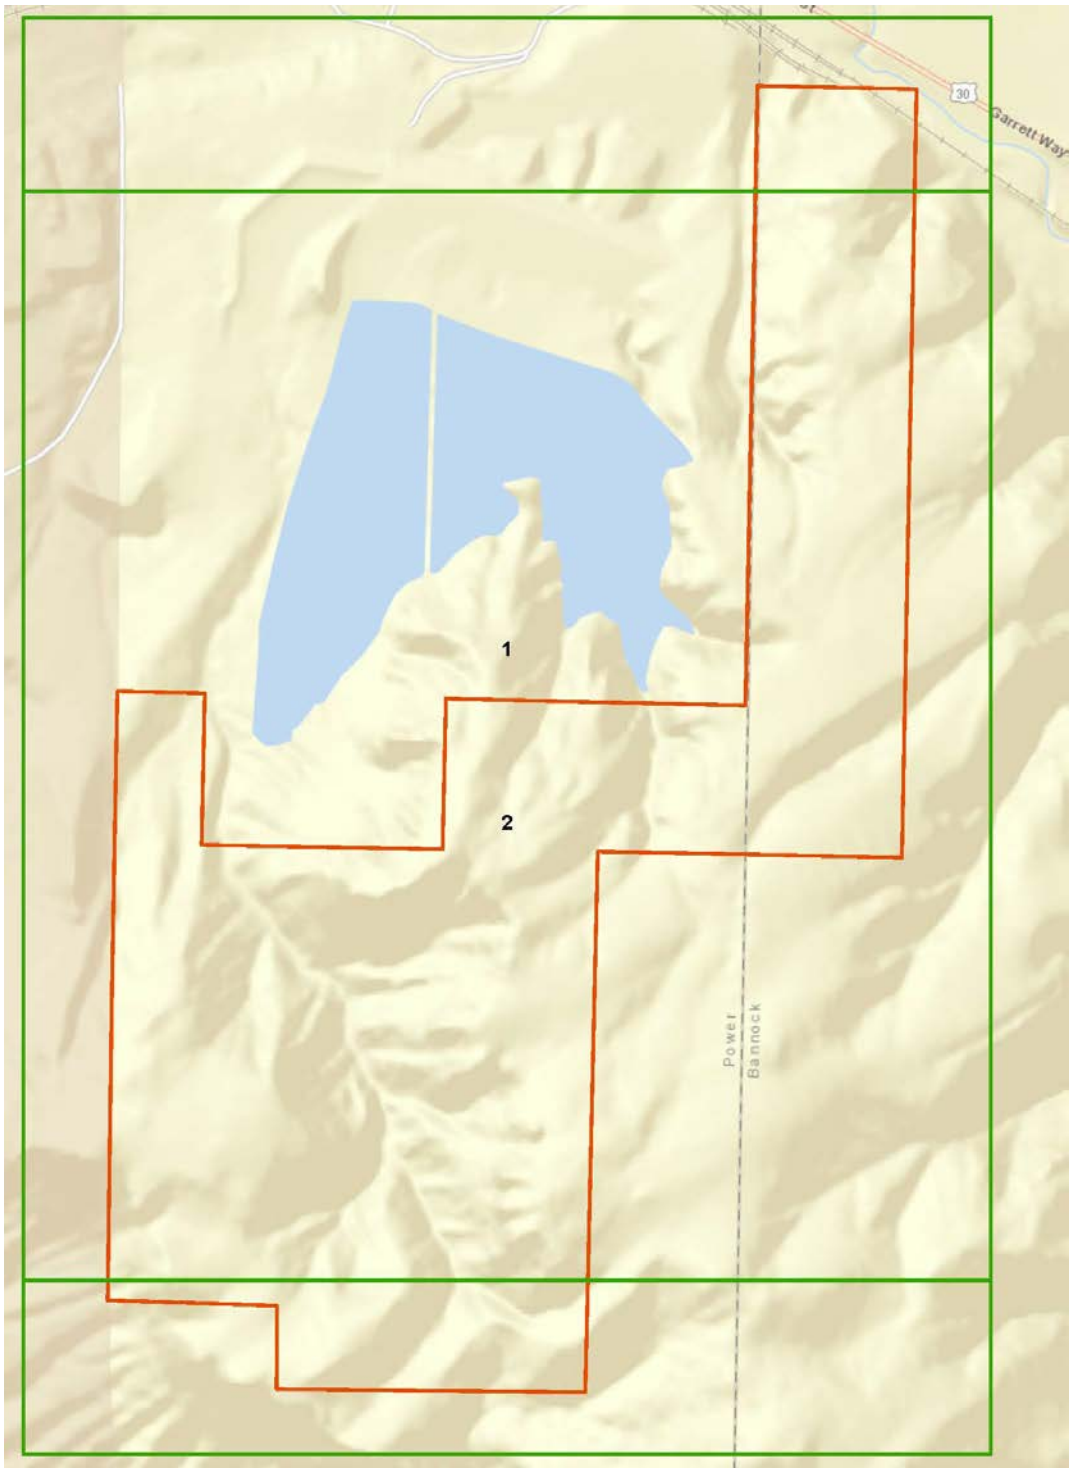

Figure 3. EDR Photographic Coverage
Numbers 1 and 2 in the figure relate to the _1 and _2 suffices in the picture descriptions below.

1953_1: The land was mostly undeveloped. Dirt roads were visible as were US-30 and Portneuf River to the north and northeast of the Project Area.

1953_2: The land was mountainous and mostly undeveloped. Dirt roads were visible as were two structures in the northeast portion of the Project Area. The two structures occurred within right-of-way IDI-00123 and consisted of a water reservoir and pipeline for the Union Pacific Railroad. The BLM case file shows that the right-of-way was issued on September 22, 1906, but does not indicate when the reservoir and pipeline were constructed.

1969_1: The most apparent change from the 1953 photograph was the development of industrial waste ponds (gypsum stack at Don Plant and also ponds associated with FMC operations). There were also several more roads visible in the area around the waste ponds.

1969_2: The Project Area was mostly unchanged from the 1953 photograph.

1974_1: The area north of the Project Area continues to develop and is associated with the Don Plant and FMC operations.

1974_2: The Project Area was mostly unchanged from the 1953 and 1969 photographs.

1980_1: The waste ponds and associated industrial facilities expanded in all directions adjacent to the Project Area.

1980_2: The Property Area was unchanged from the 1969 photograph.

1985_1: The area appeared mostly unchanged from the 1980 photograph.

1985_2: The Property Area was unchanged from the 1969 photograph.

1993_1: The area was mostly unchanged from the 1980 photograph, except for the waste ponds extending further south.

1993_2: The Property Area was unchanged from the 1980 photograph.

2004_1: The area was mostly unchanged from the 1993 photograph, the Don Plant and the FMC facility remain active and the waste ponds (gypstack) continues to expand. The two structures, water reservoir and pipeline for the Union Pacific Railroad, visible since the 1953 photo, were removed. BLM's case file does not contain any correspondence to indicate the date when the reservoir and pipeline were removed.

2004_2: The Project Area was unchanged from the 1993 photograph except that the two structures in the northeast portion, visible since at least 1953, were removed.

2009_1: The area was mostly unchanged from the 2004 photograph, the gypsum stack continue to expand.

2009_2: The Property Area was unchanged from the 2004 photograph.

2013_1: The area was mostly unchanged from the 2009 photograph. The waste ponds were significantly darker in areas, which may be an indication of increased depth.

2013_2: The Property Area was unchanged from the 2009 photograph.

2017_1: The configuration of the waste ponds and some of the associated facilities to the north did not change location, but changed configuration from all past photos. The waste ponds again were darker than in pre-2013 photographs. There were two new, small areas of development associated with the ponds on their east side.

2017_2: The Property Area was unchanged from the 2013 photograph.

4.3.3 Historical Topographic Maps

Historical topographic maps provide an overview of the area relative to potential previous land uses. HDR reviewed historical topographic maps of the Project Area provided by EDR. These maps served to augment information that was gathered in the historic aerial photograph review. The USGS 7.5-minute series topographic maps (Pocatello North, 1971; Pocatello South, 1971; Michaud Creek, 1971, Michaud, 1971; Pocatello South, 1974, Michaud, 1974; Michaud Creek, 1974; Pocatello North, 2013; Pocatello South, 2013; Michaud Creek, 2013; and Michaud, 2013) and the 15-minute series topographic maps (Michaud, 1934; Pocatello, 1937; Michaud, 1937) were reviewed, and are provided in Appendix C. The topographic maps show little change in the area over time, except that beginning in 1971, they show the locations of industrial waste ponds ultimately associated with the Simplot Don Plant and the FMC facility.

4.3.4 City Directory Information

There is no physical address for the Project Area; therefore, there are no search results available for the parcels in city directories.

4.3.5 Environmental Liens, Activity Use Limitations (AULs) and Additional Information

Per the Statement of Services assumptions (Section 1.2), no environmental lien search for the Project Area was conducted in support of this Phase 1 ESA. The EDR database (Appendix A), however, includes the following environmental lien databases:

- NPL Liens – Federal Superfund Liens - Federal Superfund Liens. Under the authority granted the EPA by CERCLA of 1980, the EPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. EPA compiles a listing of filed notices of Superfund Liens.

The Project Area is not listed in the database. In addition, EDR contains the following related databases to site institutional/engineering controls:

- LUCIS – Land Use Control Information System
- US ENG CONTROLS – Engineering Controls Sites List
- US INST Control – Sites with Institutional Controls
- INST Control – Idaho's institutional controls restricting list

The Project Area is not listed in these databases. However, the nearby EMF site is listed in both US ENG CONTROL and US INST Control.

4.3.6 Summary of Previous Environmental Investigations

PREVIOUS PHASE 1 ESA

In 2009, HDR prepared a Phase I ESA for the Pocatello office of the BLM that reviewed all but one of the same properties for a potential land exchange with Simplot.

- Phase I Environmental Site Assessment, Proposed Blackrock Land Exchange IDI-35337, November 2009

The Federal land proposed in the 2009 exchange is the same Federal land proposed for the current exchange.

The 2009 Phase I ESA reviewed the history of Simplot's and BLM's efforts to complete a land exchange that ultimately date back to an initial proposal for a Blackrock Land Exchange from Simplot to BLM in 1994. Following is a chronology of events:

- April 29, 1994: Simplot submitted a Blackrock Land Exchange proposal to the Pocatello Resource Area, BLM.
- January 3, 1995: Simplot amends proposal to offer an additional parcel of non-Federal land.
- 1995-1996: *Feasibility Report/Analysis and Agreement to Initiate* is developed and approved. An environmental assessment (EA) is started.
- 1996-2001: Exchange put on hold.
- 2001: Simplot renews talks with BLM to continue processing the proposed exchange and amends the proposal to include more acreage of both non-Federal and Federal land.
- 2002: HDR conducted Phase I ESA for BLM
- 2007: HDR updated the Phase I ESA for BLM
- 2009: HDR updated the Phase I ESA for BLM

The 2009 Phase I ESA summarized site reconnaissance conducted in 2002, 2007, and 2009. The 2009 report findings included the following (Federal land summary only):

- The EMF Superfund site includes two phosphate ore processing plants: Simplot's Don Processing Plant, an operational phosphate fertilizer manufacturing facility, and the former Astaris Elemental Phosphorus Plant (also known as the FMC facility) and the surrounding land (Offplant Operating Unit (OU)). The FMC facility is mostly located within the Fort Hall Reservation. Don Plant is located on non-Federal, Simplot-owned property. EPA listed the EMF site on its NPL on August 30, 1990; issued a ROD for the site in 1998; and negotiated a separate consent decree with Simplot for the Don Plant. A baseline ecological risk assessment found contaminant releases (metals, radionuclides, fluoride and phosphorus) via air, to vegetation and soil on the Project Area and adjacent non-Federal and Federal lands. The ROD identified measures for Simplot and FMC to take to address site impacts in the Offplant OU. No remedial action has taken place in the Project Area and none has ever been proposed.
- The Preliminary Site Characterization Summary of the RI/FS (Bechtel, Unpublished Report, 1994) provides data for areas outside the Don Plant and FMC facility and includes samples

collected within the Project Area. Conclusions of the EMF off-site soils study (Bechtel, Unpublished Report) state that most contamination from EMF facilities is found to the north and east of the existing plant facilities (see Appendix F of this Phase 1 ESA for a table showing soil sample results for Sections 17 and 19). Because Howard Mountain is a barrier, and prevailing winds are from the southwest and southeast, emissions to the south have been limited. Two additional conclusions from the study are that subsurface soils have not been impacted by airborne releases, and that air deposition is the sole mechanism for initial placement of EMF material to off-site locations.

- Pacific Hide and Fur Depot (also known as Pacific Hide and Fur Recycling Company) was an approximately 10-acre site at 3575 US-30 West, within 1 mile east northeast of the nearest point of the Project Area. The site was previously occupied by a gravel mining operation prior to 1950, and a scrap yard from the late 1950s to 1983, when PCB-contaminated residual oil was allowed to drain directly into the ground. Also, capacitors were discarded directly into the pit and lead acid batteries were drained on site, while their casings were mixed with the metal scrap. In a 1983 emergency EPA action, some contaminated soil was removed a fence was erected around the dump area for capacitors. The site was listed in 1984 for contamination of groundwater and surface water by PCBs. Criminal charges were filed and sentences were passed on 2 of 3 defendants. The site was deleted from the NPL in 1999 following several RODS, several consent decrees, and finally a closeout report. The Project Area is over 1,000 feet higher in elevation than the site. Also, the Portneuf River likely serves as a hydraulic boundary between the contaminated site and the Federal lands proposed as part of the land exchange.
- The 2009 Phase I ESA did not reveal any new findings since the 2007 Phase I ESA.

5.0 Site Reconnaissance

5.1 Methodology and Limiting Conditions

HDR conducted a site reconnaissance of the Project Area by observing site conditions from accessible roads and walking areas that were accessible, while avoiding unsafe areas such as cliffs and steep terrain. HDR personnel also used binoculars to observe land features and used Google Earth to assess land surface features. Because of the large acreage involved, HDR's team did not physically walk all areas; however, HDR attempted to observe the entire acreage through visual observation, including viewing inaccessible areas through binoculars.

5.2 Observations

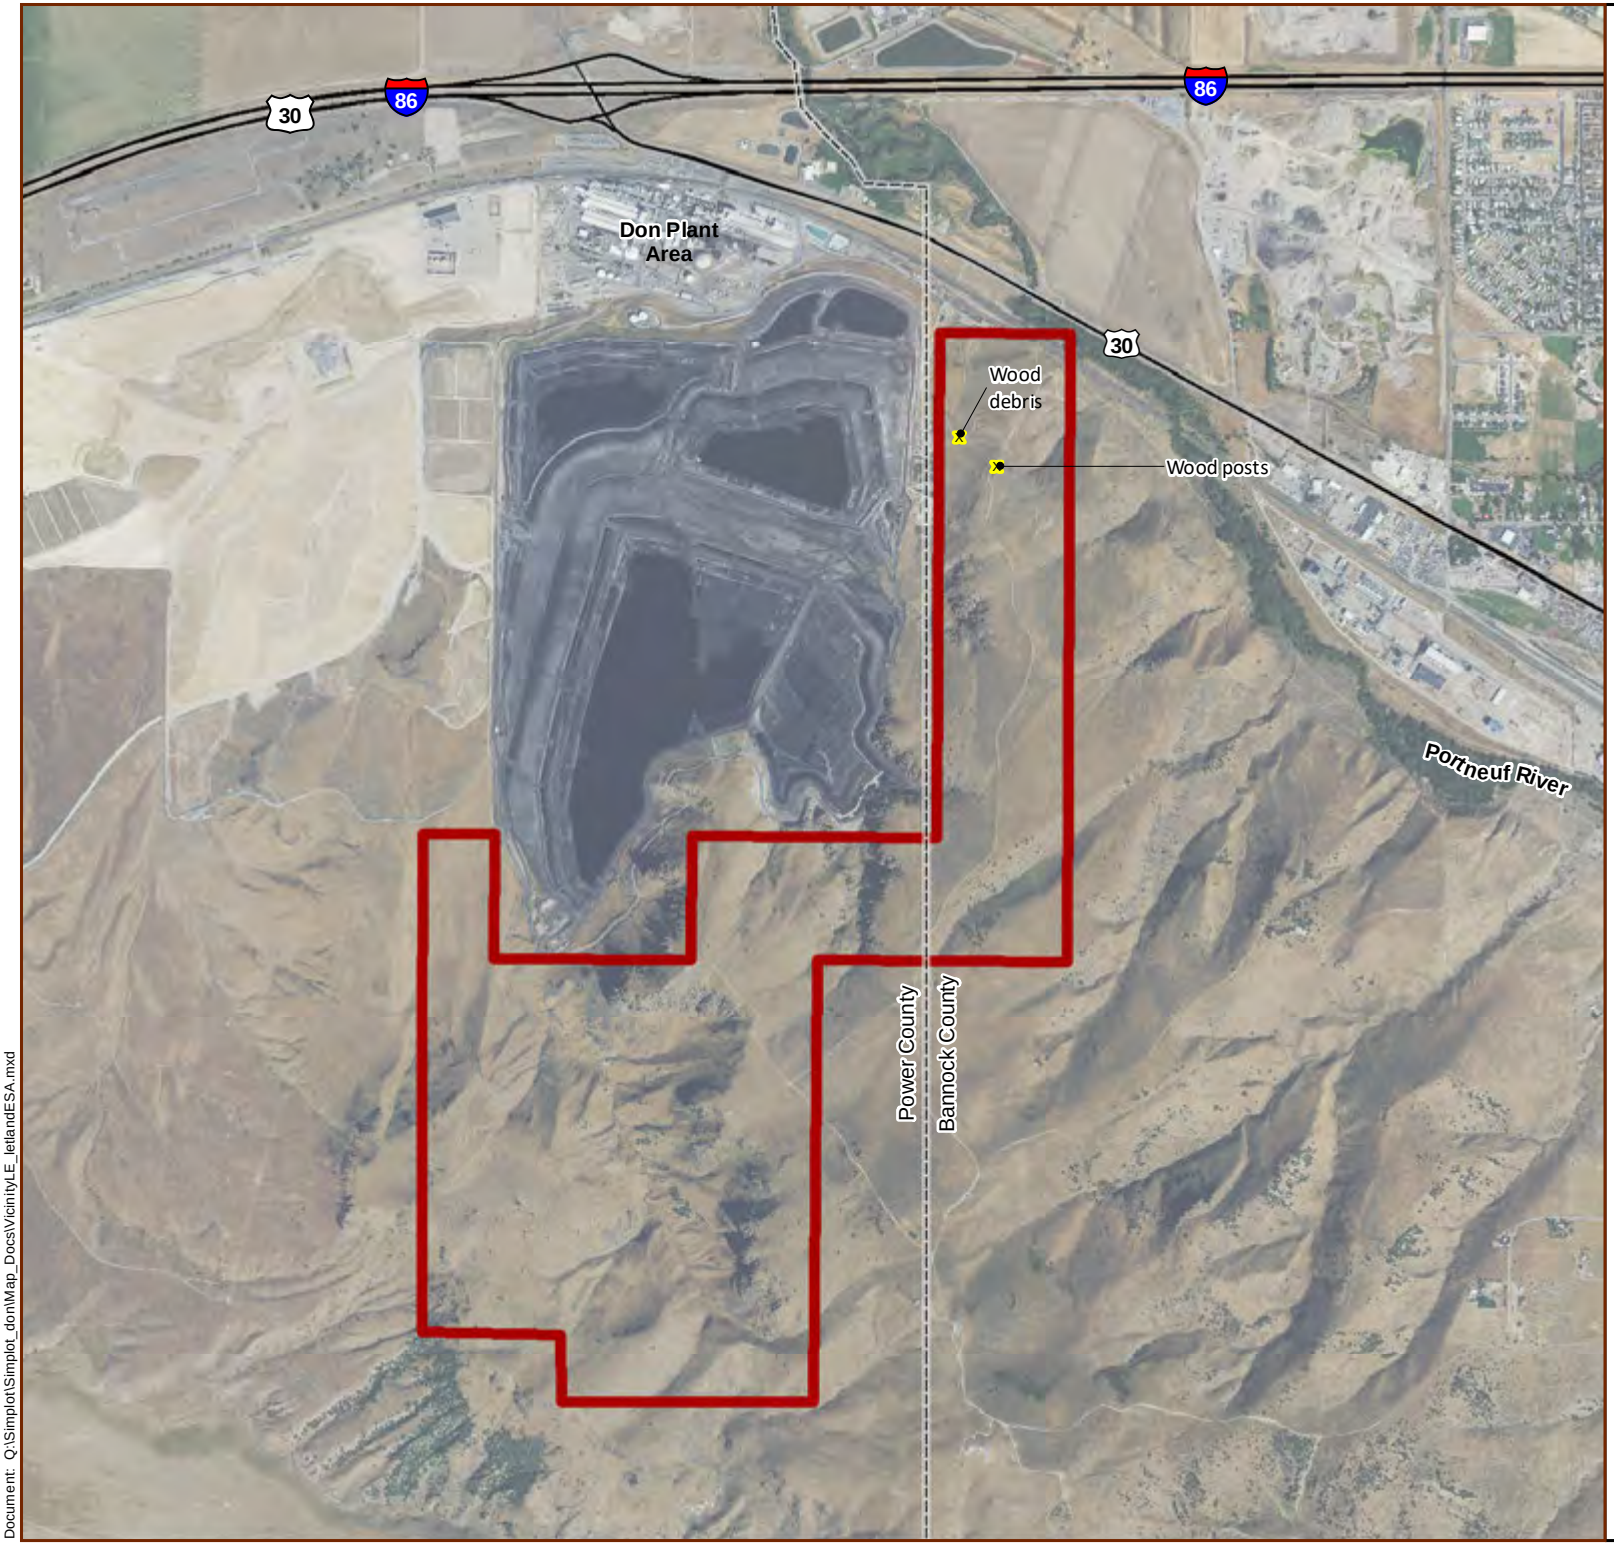

On June 11, HDR conducted a reconnaissance of the Project Area and surrounding properties, located on the south and east sides of the Simplot Don Plant. **Figure 4** shows the locations of identified features. The HDR field crew met with Monty Johnson and Wendy Fuell from Simplot on the morning of June 11 to be led to the site (while Federal land, Simplot personnel were familiar with access, that included accessing some areas through non-Federal, Simplot-owned property). Several BLM dirt roads cross the Project Area on the east side of the main canyon. HDR drove to the end of one of the dirt roads, approximately centered on the east side of the canyon, and looked into the canyon from the eastern edge. HDR observed the signature rock area (from one of the previous

Phase 1 ESAs); however, the location was not accessible due to the steepness of the east side of the canyon. The reconnaissance team followed other roads on the east side of the canyon to get viewpoints into the canyon and into smaller draws away from the canyon. The team used binoculars to view distant locations for indication that further access was needed.

In addition for assessing the Project Area for ASTM defined RECs, the area was also assessed for solid waste and physical hazards, where BLM defines physical hazards are as follows:

> *Man-caused situations, such as mine shafts, high walls, unsafe bridges, primitive roads, or similar features, where the potential exists for injury or death to visitors on the lands before the disposal is completed* (BLM 2012).

Table 3 summarizes site observations. To the east of the Don Plant, there is a main dirt road that runs north-south as well as a couple of smaller roads that branch off (especially near the northern property boundary). At the northern end of the property, there is a circular dirt road coming off of the main road that branches off and gives access to the Simplot Don Plant (there is a gate across the road to mark the property boundary). Next to the road leading to the Simplot Don Plant was some wood debris (fence posts and pallets). Just south of the circular dirt road, are a couple of old posts sticking out of the side of the hill (**Figure 4**).

Figure 4.
Site Reconnaissance Identified Features
Blackrock Disposal Phase 1
Bannock/Power Counties Idaho

In addition, HDR observed the area surrounding latitude/longitude 42.877/-112.521 that is listed as the Pocatello Moving Target Range and was unable to identify any land disturbance that would suggest any type of target range in the area.

Table 3 – Summary of June 11, 2019, Site Visit Observations

Feature	Comment/Observations
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Project Area	Not observed.
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)	Not observed.
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use	Not observed.
Unidentified Substance Containers	None
Electrical or Mechanical Equipment Likely to Contain Fluids	None observed.
Interior Stains or Corrosion	No structures on-site.
Strong, Pungent, or Noxious Odors	None
Pools of Liquid	None
Drains, Sumps, and Clarifiers	None observed.
Pits, Ponds, and Lagoons	None
Stained Soil or Pavement	No soil staining observed.
Stressed Vegetation	None.
Solid Waste Disposal or Evidence of Fill Materials	Some trash, abandoned fencing and wood debris. Shoot gun shells found various locations along roads, but not in great concentrations (not considered to be a shooting range, rather random shooting).
Waste Water Discharges	No observed.
Wells	None observed
Septic Systems	Not observed.
Physical Hazards	No man-made hazards observed. The steep canyon walls are natural, but are considered hazards to humans.

Select photographs taken during site reconnaissance are included in Appendix D.

5.3 Solid Waste and Physical Hazards

As described in **Table 3**, some trash (paper, cans, bottles, and cigarettes), abandoned fencing and wood debris were observed. Shoot gun shells found various locations along roads, but not in great concentrations (not considered to be a shooting range). No man-made physical hazards were observed in the Project Area.

5.4 Utilities and PCBs

A power line traverses the Project Area in a north-south direction near the middle of Section 19. According to EDR, this is a 345 kilovolt (kV) line. Another power line runs north-south approximately one-half mile from this one, and is identified by EDR as a 138 kV line. This second power line falls outside of the Project Area. No transformers were observed on the Federal land.

5.5 Vapor Intrusion Potential

According to EPA guidance, vapor intrusion is the general term for the migration of the vapor phase contaminants into buildings or structures. These contaminants are primarily volatile organic compounds (VOCs) and some heavy metals (mercury). These contaminants migrate from any subsurface contaminant source, such as contaminated soil or groundwater, through the soil and into an overlying building. The two general classes of VOCs that account for a large number of soil and groundwater contamination sites in the United States are petroleum hydrocarbons and non-petroleum hydrocarbon fuel additives, and chlorinated solvents (drycleaners and de-greasers).

The potential for vapor intrusion was evaluated for the Project Area. Based on the current and historical use of the Project Area, and the lack of VOC sources in the immediate vicinity, vapor intrusion is not considered to be of concern for the Project Area.

6.0 Interviews and Summary of Land Uses

6.1 Interviews

HDR conducted a phone interview with Mr. Bryce Anderson of the BLM on June 11, 2019. Mr. Anderson is the BLM project manager for the land exchange project and is familiar with land management and hazardous materials issues on BLM land in the Pocatello area. The following is a summary of the interview findings regarding the Project Area (Federal land):

- In 2013, Simplot had a release of gypsum from a diked area and some gypsum entered onto BLM land near the southern end of the gypstack. Simplot reported the release and IDEQ oversaw the cleanup of the material. IDEQ considers the release mitigated.
- Other than the gypsum release, Mr. Anderson is not aware of any RECs associated with the Project Area (Federal land) and is not aware of any reports on file at BLM indicating dumping or release of hazardous materials.
- Mr. Anderson did indicate that the Project Area has been impacted by Don Plant operations relating to air emissions and that the Project Area are part of the EMF Superfund site.
- Mr. Anderson was aware of the Army Corps of Engineers' FUDS database listing, but is unaware of any environmental issues at this location. He speculated that the Pocatello Moving Target Range may be from World War II training, but the BLM has no records regarding this activity at this location (see Section 4.1.1 and Appendix E for additional information).
- Mr. Anderson also reviewed BLM's Abandoned Mine Site Cleanup Module (AMSCM) database. He indicated the only feature within the Project Area that was recorded in the database consisted of the 2013 release of gypsum from a diked area.

In addition, HDR interviewed Monty Johnson of Simplot. Mr. Johnson is familiar with Don Plant operations and in general familiar with land use of the Project Area. Mr. Johnson indicated he is not aware of any new RECs (since 2009) associated with the Project Area other than those identified as part of the 2009 Phase 1 ESA (relating to the EMF Superfund site). Mr. Johnson also described the gypsum release and that material has been cleaned up (see first bullet above).

6.2 Known Current and Past Uses of the Project Area and Adjoining Properties

Project Area (Federal land). The Project Area has been mainly undeveloped since at least 1937. A few unpaved roads traverse the site, mainly north-south through Section 17, across the northwest tip of Section 20, and into Section 19. There were two structures within right-of-way, IDI-00123, which consisted of a water reservoir and pipeline for the Union Pacific Railroad. BLM's case file shows that the right-of-way was issued on September 22, 1906. The case file does not contain any correspondence to indicate when the reservoir and pipeline were constructed or removed. However, based on aerial photographs, the two structures were removed by 2004.

Adjoining North. The Simplot Don Plant abuts the Project Area to the north (Section 19) and to the west (Section 17) (**Figure 2**, Appendix A). Simplot has produced fertilizer products at the plant since 1944. This facility is still in operation. The gray un-vegetated area containing several ponds (slurry water containing gypsum) shown in **Figure 2** is Simplot's gypsum stack. Simplot completed installation of a synthetic liner over the gypsum stack consistent with the CERCLA ROD in 2018. The FMC facility, located to the northwest of the Project Area, produced elemental phosphorus from 1949 to 2001. FMC shut down the operation, and the buildings were demolished in 2001. These sites combined with some off-facility areas comprise the EMF Superfund site.

Adjoining East. The area adjoining the Project Area to the east has been mainly undeveloped since at least 1937.

Adjoining South. The area adjoining the Project Area to the south has been mainly undeveloped since at least 1937.

Adjoining West. For Section 19, the adjoining west property is undeveloped BLM land. The adjoining land to the west of Project Area in Section 17 is Simplot Don Plant property (**Figure 2**).

7.0 Recognized Environmental Conditions/ Historical Recognized Environmental Conditions

HDR has conducted a Phase I ESA of the Project Area (Federal land as part of a potential land exchange), located near Pocatello, Idaho. The ESA was performed in general conformance with the scope and limitations of ASTM Practice E 1527-13 and with BLM Manual Handbook H-2000-02. Any exceptions to, or deletions from, this practice are described previously in this report.

This assessment has revealed no evidence of RECs in connection with the Project Area. The adjacent EMF Superfund site, has impacted the Subject Property and may be classified as a CREC (see Section 1.1 for definition):

- A portion of the Project Area is located within the boundaries of the EMF Superfund site. The EMF site includes two phosphate ore processing plants - the Simplot Don Processing Plant, an operational phosphate fertilizer manufacturing facility, and the former Astaris Elemental

Phosphorus Plant (also known as the FMC facility) and surrounding lands (the Offplant OU). Most of the FMC facility is located within the boundary of the Fort Hall Reservation on privately-owned fee land. Simplot's Don Plant is located on non-Federal, Simplot-owned land. The EMF site was listed on EPA's National Priority List on August 30, 1990. The site encompasses Onsite OUs for FMC and Simplot, and the Offplant OU as identified in the Record of Decision, issued by EPA in 1998. EPA negotiated a separate consent decree with Simplot for the Simplot Plant Operable Unit. A baseline ecological risk assessment conducted to evaluate potential effects of site related contamination on the natural environment found releases of contaminants from the EMF site on soils in the Offplant OU via movement in the air. Elevated levels of several constituents have been identified in the soils and vegetation on the Project Area, and adjacent non-Federal and Federal land. These constituents include metals, radionuclides, fluoride and phosphorous. The Project Area is located within the Offsite OU of the EMF Superfund site. The ROD identifies the measures to be taken by Simplot and FMC to address site impacts. No remedial action has taken place in the past, nor has been proposed by EPA for the Federal land.

8.0 CERCLA 120(h)/40 CFR, part 373 Requirements for Notice

Whenever BLM enters into any contract for the sale or other transfer of real property on which any hazardous substance was stored for 1 year or more, known to have been released, or disposed of, the BLM must include in such contract notice of the type and quantity of such hazardous substance and notice of the time at which such storage, release, or disposal took place, to the extent such information is available on the basis of a complete search of the agency files.

As described in Section 4.3.6, contaminants are present in some vegetation and soils in the Offplant OU, which is part of the Project Area. The contaminants are attributed to deposition via air from the EMF Superfund site. Such contaminants are considered disposal and per BLM Manual Handbook H-2000-02, it is BLM policy that providing notice for disposal will be based on any amount of a hazardous substance.

The content of the notice must include (BLM Manual Handbook H-2000-02):

Table 4 – Content of Notice

Name of the Hazardous Substance	Chemical Abstracts Services Registry Number (CASRN)	Regulatory Synonym	RCRA Hazardous Waste Number	Reportable Quantity 40 CFR Part 302.4[a]	Quantity Disposed of at Site	Date(s) of Disposal
beryllium	7440-41-7	None	P015	10 lbs (4.54 kg)	Unknown	1940s-2001
cadmium	7440-43-9	None	NA	10 lbs (4.54 kg)	Unknown	1940s-2001
vanadium		None			Unknown	1940s-2001
zinc	7440-66-6	None	NA	1000 (454)	Unknown	1940s-2001

[a] Historical Air Emissions from Simplot and FMC phosphate ore processing plants that began operation in the 1940s. The FMC facility closed in 2001; the Simplot facility is still operational.

RCRA = Resource Conservation Recover Act; CFR = Code of Federal Regulations; lbs = pounds; kg = kilograms

Remedial Action: The ROD identified measures for Simplot and FMC to take to address site impacts in the Offplant OU. No remedial action has taken place in the Project Area and none has ever been proposed.

9.0 Findings and Conclusions

HDR has conducted a Phase I ESA of the Project Area, approximately 719 acres of Federal land proposed for exchange in the Blackrock Land Exchange with BLM, near Inkom and Pocatello, Idaho. Simplot and BLM are requesting a Phase I ESA of the aforementioned properties for a potential exchange for non-Federal lands.

The Phase I ESA was performed in accordance with the scope and limitations of ASTM Practice E 1527-13 and BLM Manual Handbook H-2000-02. Any exceptions to, or deletions from, this practice are described previously in this report. Included in this Phase I ESA are a summary of the site reconnaissance conducted on June 11, 2019, the review of the environmental database search report, historical data sources, and other records, and interviews with available personnel knowledgeable about the Project Area.

General findings of this assessment include the following:

- The Project Area is Federal land proposed for exchange in the Blackrock Land Exchange project, in Bannock and Power counties near Pocatello and Inkom, Idaho. The land around the Project Area consists of a mix of industrial, residential, public, and tribal uses. Fort Hall Reservation belonging to the Shoshone-Bannock Tribes dominates the area west of the Project Area. Immediately north of much of the Project Area is the Eastern Michaud Flats (EMF) site. The EMF site is a CERCLA regulated Superfund site comprised of Simplot's Don Plant facility and the previous FMC phosphorus plant.
- Review of government records and historical sources identified the Project Area as part of the EMF Superfund site, characterized as the Offplant OU. Elevated levels of some metals and inorganics have been identified in surface soils. Elevated fluoride has been identified in vegetation. Superfund risk assessment identified no human health risk and marginal ecological risk due to fluoride in vegetation. No remedial action has been proposed by EPA for the Project Area.
- The Project Area at latitude/longitude 42.877/-112.521 is identified as the Pocatello Moving Target Range in the FUDs database (program ID: F101D0119). The same location is also listed in the UXO database. The FUDS are properties were (are) Federal lands that were used by the DOD. The FUDs database was established in 1986 for assessment, and if

cleanup was deemed necessary, it was led by the Corps. UXOinfo.com site list the site as a FUDS site but indicates that the history as “no data available.” HDR obtained records from the Corps regarding the Pocatello Moving Target Range (Appendix E). The range was used by the War Department in 1943 and 1944 as a moving target range over a 4,494 acre area (the exact locations remains uncertain but it included current day BLM managed land in the Pocatello area, and likely included the Project Area). Inspections were conducted in 1991, no hazards were identified. The Corps concluded, “since no hazardous or toxic waste was discovered, this site is recommended for no further action.”

- In 2013, Simplot had a release of gypsum from a diked area and some gypsum entered onto BLM land near the southern end of the gypstack. Simplot reported the release and IDEQ oversaw the cleanup of the material. IDEQ considers the release mitigated.

10.0 Opinion and ASTM Statement

HDR has reviewed the stated data sources, which are part of the ASTM E 1527-13 assessment protocol. Based upon the review of the data, HDR has developed the following professional opinion and statement:

HDR has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527.13 and BLM Manual Handbook H-2000-02 for the Project Area. Any exceptions to, or deletions from, this practice are described in Section 11.0 of this report. This assessment has revealed no evidence of RECs in connection with the property, except for the following:

- The Project Area is located within the Offplant OU of the EMF Superfund site. The ROD identifies the measures to be taken by Simplot and FMC to address site impacts, including the Offplant OU. No remedial action has taken place in the past, nor has been proposed for the Federal lands, including the Project Area. This portion of the Project Area is considered a CREC.
- The area around latitude/longitude 42.877/-112.521 is listed in the FUDs database and is not considered a REC based on information provided by the Corps (see Appendix E).
- The release of gypsum form a diked are onto the Project Area has been mitigated and is not considered a REC.

11.0 Deviations

The ASTM E 1527-13 standards require a listing of “data gaps,” including data failure, encountered during the investigative process that may affect the validity of the conclusions drawn by the environmental professional. The ASTM E 1527-13: 12.7 standard also requires that the environmental professional estimate the relative importance of the data gaps. Generally, gaps in available data are related to the availability of historical data sources for specific sites of concern. The environmental professional uses multiple historical data sources as a method to provide coverage for data gaps. Historical information is collected on a recurring basis, and the passage of time between data sets may or may not constitute a significant gap in data coverage.

For this project, the following items may constitute a data gap or deviation from standard ASTM E 1527-13:

- Absence of Sanborn fire insurance maps
- Absence of city directory information

The inability to obtain and review the Sanborn fire insurance maps and city directories do not present significant data gaps, because of the presence of other supporting historical information. As described in Section 10, the FUDs database remains a data gap until additional information is obtained on this listing.

13.0 Recommendations

Recommendations included in this report were developed through the investigative procedures described in the Scope of Services, Significant Assumptions, and Limitations sections of this report (see Section 1.2). These findings should be reviewed within the context of the limitations provided in the Limitations section.

Recommendation 1

This assessment has revealed no evidence of hazardous substances, petroleum products, or recognized environmental conditions and/or CERCLA 120(h) concerns on this real property. No further inquiry is needed for purposes of appropriate inquiry; therefore, this real property is suitable for disposal.

Recommendation 2

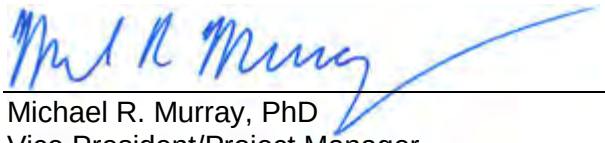

Report users should consider the “shelf life” of Phase I documents in determining risk. ASTM E 1527-13: 4.6 states that a conforming “Phase I” report is valid for a period of 180 days, and may be

updated during the 180 days to 1-year timeframe. The report is valid for use in any of the CERCLA defenses ONLY if it is updated within this time frame. If greater than one year passes from the final report date, the Phase I effort would need to be repeated to remain in compliance with ASTM and the "All Appropriate Inquiry" protection.

14.0 Approvals

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in Section 312.10 of 40 Code of Federal Regulations [C.F.R.] Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the project area. We have developed and performed the all appropriate inquires in conformance with standards and practices set forth in 40 CFR Part 312.

Michael R. Murray, PhD
Vice President/Project Manager

15.0 Qualifications of Environmental Professionals

This Phase I ESA was performed by the following HDR personnel:

Mr. Michael R. Murray, Ph.D., HDR's qualified environmental professional, as defined by ASTM Practice E 1527-13, has 28 years of experience in ESAs, soil and groundwater investigations and remediation, wastewater/biosolids land application, wetland delineation and mitigation, statistical analysis and design, mine site closures, hazardous materials management, biological assessments, database management, research, project management, and teaching. Dr. Murray's responsibilities have included technical lead, project planning, field supervision, schedule and cost control, public relations, and expert witness support. He has conducted over 100 ESAs.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at proposal May 5, 1989): The Eastern Michaud Flats Contamination Site covers 2,530 acres in Power County, Idaho, near Pocatello. The Michaud Flats are on the Snake River Plain and are bounded on the north by American Falls Reservoir, on the east by the Portneuf River, on the west by the Rock Creek, and on the south by foothills of the Deep Creek Mountains and Bannock Range. Within the eastern part of the flats are two adjacent phosphate processing facilities. FMC Corp. has produced elemental phosphorus from phosphate shale ore on 1,400 acres since 1949. J.R. Simplot Co. has produced a variety of fertili er products from phosphate ore on 1,130 acres since 1944. Waste water from both facilities has been stored or disposed of in unlined ponds. FMC is phasing out the use of unlined ponds, and J.R. Simplot has implemented a waste water treatment system. In the summer of 1987, EPA detected elevated levels of heavy metals in sediments of the unlined ponds at both facilities and in waste water at J.R. Simplot. In addition, arsenic, cadmium, and selenium were detected in monitoring wells in the deep confined aquifer. Public and private wells within 3 miles of the area providedrinking water to an estimated 55,000 people and are also used to irrigate over 2,100 acres of forage crops. A private well is 800 feet from an on-site lagoon. In 1976, the State of Idaho closed a drinking water well downgradient of FMC due toelevated arsenic levels. Currently, no other private or public water supply wells are known to be contaminated, although elevated levels of arsenic were detected in a downgradient spring used for drinking. Status August 30, 1990): EPAwill soon be sending out general notice letters and requests for additional information to FMC, J.R. Simplot, and other parties potentially responsible for wastes associated with the site. EPA will then investigate the possibility of those responsible performing a remedial investigation/feasibility study to fully define the nature and extent of contamination at the site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ID SHWS: This state does not maintain a SHWS list. See the Federal CERCLIS list and Federal NPL list.

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by HDR were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

MEMORANDUM FOR

Commander, Walla Walla District (CENPW-PM), P.O. Box 602, City-County Airport, Walla Walla, Washington 99362-9265

Commander, U.S. Army Corps of Engineers, Huntsville Division, (CEHND-PM-E), P.O. Box 1600, Huntsville, Alabama 35807-4301

SUBJECT: Defense Environmental Restoration Program for Formerly Used Defense Sites (DERP-FUDS); Inventory Project Report (INPR), for Site F10ID011900, Pocatello Moving Target Range, ID

1. This memorandum approves the No Further Action (NOFA) recommendation for the subject site.

2. Request that:

a. CENPW, within 60 days of the date of this memorandum, notify the landowners(s) of the decision and provide copies of the notification letter(s) to CEMP-RF, CEHND-PM-E, and this office.

b. CEHND, file this INPR and update the inventory database.

3. The CENPD-PM-MP POC for this action is Mr. Moon-Yong Han, P.E., COM 503-326-3854.

REPLY TO
ATTENTION OF:

CENPW-EN-GB (200-1a) 17 September 1991

MEMORANDUM FOR Commander, North Pacific Division, ATTN: CENPD-PM-MP

SUBJECT: Defense Environmental Restoration Program-Formerly Used Defense Sites (DERP-FUDS) Inventory Project Report (INPR) for Site No. F10ID011900, Pocatello Moving Target Range, Idaho

1. This INPR reports on the DERP-FUDS preliminary assessment of the Pocatello Moving Target Range. The site visit was conducted on 10 and 11 September 1991. The site survey summary sheet and site map are forwarded as Enclosures 1 and 2.

2. Based on a historical records search, conversations with the current landowners, and a visit to the site, we have determined that the site was formerly used by the Army, and is therefore eligible for cleanup under DERP-FUDS. A Findings and Determination of Eligibility is enclosed (Enclosure 3).

3. Since no hazardous or toxic waste was discovered, this site is recommended for no further action (NOFA).

4. I recommend that you:

a. Approve and sign the Findings and Determination of Eligibility;

b. Approve this site for NOFA; and

c. Forward a copy of this INPR to Huntsville Division for the Preliminary Assessment File.

SITE SURVEY SUMMARY SHEET
FOR
DERP-FUDS SITE NO. F10ID011900
POCATELLO MOVING TARGET RANGE
SEPTEMBER 1991

SITE NAME: Pocatello Moving Target Range, Pocatello Idaho.

LOCATION: This site is located 1 mile west of Pocatello, Idaho Bannock and Power County, Idaho (see location map).

SITE HISTORY: This site was first acquired by the War Department in 1943 and 1944 for a moving target range. The Pocatello Moving Target Range was used exclusively for military training purposes. In 1943 and 1948, the Department of the Army relinquished to the U.S. Department of the Interior this aggregate 4,493.36-acre site. Today, the majority of the area is privately-owned and is used for residential, agricultural, and industrial purposes.

SITE VISIT: A site inspection was performed by William Harrison, CENPW-EN-GB, on 10 and 11 September 1991. During the site inspection, the land was found to have limited access primarily due to industrial and farm use along its borders. Areas of the property open to the public were littered and the roads were in poor condition. The industrial areas included two very large mining/milling operations. No public access was allowed in these areas. No evidence of any DOD use was noted on the site.

CATEGORY OF HAZARD: The inspection focused on the following hazards: CON/HTW, BD/DR, HTW, EO, PRP/HTW. No hazards identified.

PROJECT DESCRIPTION: No projects are proposed for this site.

AVAILABLE STUDIES AND REPORTS: None identified.

PA POC: Bill Harrison, 509-522-6767, FTS 434-6767, is the district POC.

DEFENSE ENVIRONMENTAL RESTORATION PROGRAM
FORMERLY USED DEFENSE SITES PROGRAM
FINDINGS AND DETERMINATION OF ELIGIBILITY

POCATELLO MOVING TARGET RANGE
SITE NO. F10ID011900

FINDINGS OF FACT

1. On 1 October 1943 and 15 March 1944, an aggregate 4,493.36-acres of Public Domain land in Power and Bannock Counties, Idaho, were withdrawn from all forms of appropriation and reserved for use by the War Department as a moving target range. Additionally, during 1943-44, 3,648.66 acres were leased from several private owners and a no-area railroad crossing permit was acquired, bringing the total amount of land in use to 8,142.02 acres.

2. Pocatello Moving Target Range was used for military training purposes during the period of Defense Department involvement. No permanent improvements are known to have been constructed on this site.

3. On 9 October 1943 and 20 December 1948, an aggregate 4,493.36 acres of Public Domain land were relinquished to the U.S. Department of the Interior. The no-area permit terminated on 1 August 1948 and, except for a 160-acre lease which terminated earlier in 1944, leases covering 3,488.66-acres were terminated between March and June 1948. No restrictions were cited. On 9 March 1948, Pocatello Moving Target Range received a Certificate of Clearance from T. B. Wheeler, Engineer, which stated that the site was clear of all dangerous and/or explosive materials. Today, the majority of the area is privately-owned and is used for residential, agricultural, and industrial purposes.

DETERMINATION

Based on the foregoing findings of fact, the site has been determined to be formerly used by DOD. It is therefore eligible for the Defense Environmental Restoration Program-Formerly Used Defense Sites established under 10 USC 2701, et seq.

Dear Wendy:

We are pleased to provide you with the above-referenced Phase I Environmental Site Assessment (ESA) report. The attached report presents our methodology, findings, opinions, conclusions, and recommendations regarding environmental conditions at the project site.

HDR appreciates the opportunity to serve the J.R. Simplot Company on this important project. If you have any questions or comments, please feel free to contact me at 208-387-7033 or mike.murray@hdrinc.com.

Sincerely,

Summary

HDR Engineering, Inc. (HDR) conducted a Phase I Environmental Site Assessment (Phase I ESA) of nine parcels of non-Federal land in Bannock County, near Inkom, Idaho, for the proposed Blackrock Land Exchange. The proposal involves the exchange of approximately 719 acres of Federal land adjacent to the Don Plant managed by the U.S. Department of the Interior Bureau of Land Management (BLM) in exchange for approximately 667 acres of non-Federal land currently owned by Simplot. An additional parcel (159 acres) of non-Federal land owned by the J.R. Simplot Company (Simplot) has been proposed as mitigation in the land exchange and would be conveyed to the BLM. The Phase I ESA has been prepared for Simplot and BLM.

This Phase I ESA focuses on the pre-acquisition properties offered in exchange for the federal land. An assessment of the federal land is available under different cover (*Phase I Environmental Site Assessment, Blackrock Land Exchange: Disposal of Federal Land*, HDR 2019).

The properties, referenced herein as the Project Area, consist of approximately 826 acres of Simplot-owned, non-Federal land (667 acres proposed for exchange and 159 acres proposed for mitigation), which BLM would acquire following the exchange for approximately 719 acres of Federal land. Refer to the project location map and site detail maps (**Figure 1, Figure 2,** and **Figure 3**) for further detail.

This Phase I ESA identifies recognized environmental conditions (RECs) that may adversely affect the project area, and was conducted in accordance with the scope and limitations of the ASTM International (ASTM) Practice E1527-13 and BLM Manual Handbook H-2000-01. This report includes a summary of the site reconnaissance conducted on June 10 through June 13, 2019 a review of environmental databases, a review of historical data sources, environmental lien search, and personal interviews. Any exceptions to or deletions from these ASTM practices are described later in this report.

Findings

General findings of this assessment include the following:

- The Project Area is comprised of 10 parcels (approximately 826 acres) of undeveloped land in four non-contiguous blocks, in the Blackrock and Caddy Canyon area, east/southeast of Pocatello, Idaho, in Bannock County. The land around the Project Area consists of public and private uses. Undeveloped, BLM-owned Federal land dominates the area north of Interstate 15 (I-15) and north of the Project Area. Immediately south of I-15, in between the interstate and Portneuf River, are several non-Federal properties, including residences and farmland.
- Several target shooting areas were identified in the Project Area:
    - East side of a dirt road in parcel R4013043400. HDR observed several whole and broken clay pigeons, shells, glass, and broken electronics next to the road, and targets set up on a rock just off of the road.
    - In parcel R4013009600, along the main north-south running dirt road (the only dirt road on the east side of the western-most block that runs across the whole property), there is

a target shooting area to the north with a large metal target, broken clay pigeons, and shells.

- In parcel R4013043100, there were two tires in the sagebrush on the southeast corner of the property and a campfire ring on the west side of the road near the east central side of the property (did not appear to have been used).
- At the northeast corner of parcel R4013009500, there is a metal tank/basin set into the ground that a spring runs into (could hear water flowing into it) and a square concrete basin, containing solid waste and a tire. Just off property next to the main dirt road running up the canyon was a watering trough fed by a pipe that was coming from the direction of the spring (might be piped from the metal basin collecting water). The concrete basin is a physical hazard in that the top lid is missing and the tank is accessible to the public.
- East of Blackrock Canyon Road (parcel R4013009700), at one of the rock outcrops is a mine shaft (entrance to an underground mine). This is a physical hazard. No solid waste or other evidence of mining activity was observed in this area. The entrance is hidden by vegetation and there were no signs of entry (no paths from public accessing entrance).
- The 2009 Phase I ESA summarized site reconnaissance conducted in 2002, 2007, and 2009. The 2009 report findings for the Project Area included the following:
    - Review of government records in 2009 (note this did not show up in the 2019 EDR records search) revealed an historic recognized environmental condition (HREC) associated with the non-Federal land pertaining to soil lead remediation, stemming from an unauthorized shooting range discovered in 1996. Simplot created a permanent soil cover over the lead-contaminated area in 1996 and moved the drainage course west of the soil cover to prevent future flows from eroding the fill. A copy of the letter from the IDEQ is presented in Appendix E.
    - Site reconnaissance in 2002 revealed a tire dump (approximately 100 tires) in a dry draw on a portion of the non-Federal land offering. Simplot removed the tires in 2002.
    - The 2009 Phase I ESA did not reveal any new findings since the 2007 Phase I ESA.

Opinions

HDR offers the following opinion as to whether the all appropriate inquiries (AAI) conducted in accordance with 40 CFR 312 has identified conditions indicative of releases or threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances as well as the identification of solid waste issues, physical hazards, and non-scope issues in accordance with BLM Manual Handbook H-2000-01 on, at, in, or to the Project Area (non-Federal land).:

- The updated 2019 Phase 1 ESA has not revealed any RECs associated with the Project Area. HDR identified several areas where target shooting occurs (see Section 5.0). The use of these shooting areas appears to be dispersed (not high density use) and are not considered to be a shooting range (defined as areas where vegetation is devoid due to high human traffic with high density of target waste). Rather, for the observed areas, shell casings, bullets, targets, clay pigeons, and debris were scattered.

- In addition to target waste, a pallet, wire, tires camper shell, and scrap metal are present within the non-Federal lands.
- HDR identified two physical hazards as per BLM requirements as part of a Phase 1 ESA (see **Figure 5** for locations):
    - Mine shaft
    - Concrete water basin (tank) without lid.

Conclusions

Based upon the above-detailed Findings and Opinions, HDR concludes that no RECs have been identified for the Project Area, as enumerated in Findings (Section 8.0). The following statement is required by ASTM E 1527-13 as a positive declaration of whether RECs were found:

> *HDR has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527 of non-Federal land proposed for exchange with BLM in the Blackrock Land Exchange. Any exceptions to, or deletions from, this practice are described in previous sections of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.*

Recommendations

Recommendations included in this report were developed through the investigative procedures described in the Scope of Services, Significant Assumptions, and Limitations sections of this report (see Section 1.2). These findings should be reviewed within the context of the limitations provided in the Limitations section.

HDR makes following recommendations:

- BLM and Simplot should negotiate mitigation of the two physical hazards described in Section 5.0 and Section 9.0 prior to BLM acceptance of title to the property.
- The solid waste (target trash, pallet, wire, tires, camper shell, and scrap metal) should be removed prior to acquisition.
- The report user should consider the “shelf life” of Phase I documents in determining risk. ASTM E 1527-13: 4.6 states that a conforming “Phase I” report is valid for a period of 180 days, and may be updated during the 180 days to 1-year timeframe. The report is valid for use in any of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) defenses ONLY if it is updated within this time frame. If greater than one year passes from the final report date, the Phase I effort would need to be repeated to remain in compliance with ASTM and the AAI protection.

1.0 Introduction

1.1 Purpose

The purpose of this Phase I environmental site assessment (Phase I ESA) is to document the evaluation of the project lands for indications of recognized environmental conditions (RECs). ASTM International (ASTM) Practice E 1527-13 defines the following categories of REC:

REC: The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions (see definition below).

ASTM E 1527-13 defines release as a release of any hazardous substance or petroleum product shall have the same meaning as the definition of “release” in Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), 42 United States Code (U.S.C.) § 9601(22)).

Historical REC (HREC): A past release of any hazardous substances or petroleum products that has occurred in connection with the property, and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority. The property is not subject to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Controlled REC (CREC): A REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as documented by the issuance of a No Further Action [NFA] letter or equivalent, or meeting risk-based criteria established by the regulatory authority). Hazardous substances or petroleum products are allowed to remain in place, subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Additional conditions that are not included under the definitions of a REC, but are defined by ASTM Practice E 1527-13 include:

De minimis: A condition that generally does not present a threat to human health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not RECs, historical RECs nor CRECs.

Business Environmental Risk: A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.

Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.

In addition the ASTM defined RECs, the Phase 1 ESA includes addressing solid waste and physical hazards issues. Where BLM defines physical hazards are (BLM 2012):

> *Man-caused situations, such as mine shafts, high walls, unsafe bridges, primitive roads, or similar features, where the potential exists for injury or death to visitors on the lands before the disposal is completed.*

It is BLM policy that locations of sites must be identified on site maps, a detailed description be provided, and photo documentation be included in the ESA report

1.2 Scope of Services, Significant Assumptions, and Limitations

The services provided for this project consisted of the following:

- Provide a description of the Project Area, including current land uses (Section 2.1 – 2.3)
- Provide a general description of the topography, soils, geology, and groundwater flow direction (Section 2.4)
- Review reasonably ascertainable and reviewable regulatory information published by Federal, state, local, and tribal, environmental agencies pertaining to the Project Area (Section 4.0 in total)
- Review historical data sources for the Project Area, including aerial photographs, topographic maps, and other readily available development data (Section 4.3)
- Conduct an area reconnaissance and an environmental review—including a visual review of adjoining properties—with a focus on indications of hazardous substances, petroleum products, polychlorinated biphenyls (PCBs), wells, storage tanks, solid waste disposal pits and sumps, and utilities. In addition review site for physical hazards as defined above (Section 5.0 in total)
- Interview current owner of the Project Area and interview other persons with knowledge of the development history of the Project Area (Section 6.0 in total)
- Determine data gaps in the information obtained and comment on their significance in identifying RECs for the Project Area (Section 11.0)
- Prepare a written report of methods, findings, opinions and conclusions (Sections 8.0, 9.0, and 12.0 in total).

The goal of this scope of services is to assist the user in identifying conditions in the project area that may indicate risks regarding hazardous materials storage, disposal, or other impacts. The resulting report may qualify the user for relief from liabilities as one of three “defenses” identified in the 2002 Brownfields Amendments to CERCLA, Section 9607 (All Appropriate Inquiry [AAI] subsections). These three defenses include:

1. The “innocent landowner” defense to potential liabilities under 42 U.S.C. § 9601
2. The “contiguous project corridor owner” defense pursuant to 42 U.S.C. § 9607q
3. The “bona fide prospective purchaser” defense pursuant to 42 U.S.C. §9607r

Federal regulations at (42 U.S.C §9601(35)(A) & (B),§9607(b)(3), §9607(q); and §9607(r)), promulgated by the United States (U.S.) Environmental Protection Agency (EPA), require that liability release be based (in part) on completion of AAI prior to purchase of a property. Those inquiries are documented by Phase I reports, or ESAs. EPA has agreed that the recently developed ASTM guidance (ASTM Practice E 1527-13: 3.2.6) specifies and interprets AAI requirements.

A user is defined by ASTM Practice E 1527-13: as the party seeking to use Practice E 1527 to complete an ESA of the project area and may include a potential purchaser of land in the project area, a potential tenant of the Project Area, an owner of land in the project area, a lender, or a project area manager. Investigative areas not included in the standard ASTM ESA scope include: asbestos, lead-based paint, lead in drinking water, radon or urea formaldehyde, wetland issues, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, and high voltage power lines.

Indoor air quality from sources such as mold and asbestos is not included in the ASTM standard except to the extent that indoor air impacts are related to Superfund release and/or caused by releases of hazardous substances into subsurface soil or groundwater (vapor intrusion).

The potential for vapor encroachment or intrusion into structures in the Project Area are assessed from onsite or offsite sources, based on the experience of the Environmental Professional. State and national policies and standards relevant to vapor intrusion are in flux, and subject to change.

The scope of services for ESA projects also does not include the completion of soil borings, the installation of groundwater monitoring wells, or the collection of soil or groundwater samples.

HDR has made certain assumptions in preparing the scope of this assessment:

- Data gathered from public information sources (i.e., libraries or public regulatory agencies) are accurate and reliable.
- Site operations reflect site conditions relative to potential releases, and no intentional concealment of environmental conditions or releases has occurred.
- Interview information is directly reported as gathered by the assessor, and is limited by the accuracy of the interviewee's recollection and experience.
- Published geologic information and site observations made by the environmental professional are used to estimate likely contaminant migration pathways in the subsurface. These estimates by the environmental professional are limited in accuracy, and are generally cross-referenced with existing information about similar sites and environmental releases in the area, if available.
- Regulatory information is limited to sites identified after the late 1980s, because reliable records were not kept by regulatory agencies prior to that time frame.

The findings and conclusions presented in this report are based on the procedures described in ASTM Practice E 1527-13, informal discussions with various agencies, a review of the available literature cited in this report, conditions noted at the time of this Phase I ESA, and HDR's interpretation of the information obtained as part of this Phase I ESA. The findings and conclusions are limited to the specific project and properties described in this report, and by the accuracy and completeness of the information provided by others.

An ESA cannot entirely eliminate uncertainty regarding the potential for RECs. Conducting this assessment is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a project area within reasonable limits of time and cost. In conducting its services, HDR used a degree of care and skill ordinarily exercised under similar circumstances by reputable members of its profession practicing in the same locality. This Phase I ESA conforms to the level of documentation required in ASTM Practice E 1527-13. However, HDR may omit discussion of certain records, i.e., sources deemed, in HDR's professional opinion, to be inapplicable, or of limited value, to the specific needs of the client. However, in accordance with ASTM, if the lack of available documentation results in a data gap, this data gap is identified and its significance is discussed.

1.3 User Reliance

HDR Engineering, Inc. (HDR) received authorization from the J.R. Simplot Company (Simplot) and the U.S. Department of the Interior Bureau of Land Management (BLM) to conduct a Phase I ESA of the Project Area. The Project Area is defined as the non-Federal lands, located in Bannock County, Idaho, proposed for exchange with the BLM for Federal land, as well as additional Simplot-owned, non-Federal land proposed to be conveyed to BLM as mitigation. This Phase I ESA has been prepared for Simplot and BLM and only Simplot and BLM have the right to rely on the contents of this Phase I ESA without written authorization.

This Phase I ESA focuses on the non-Federal land (Project Area) offered in exchange for the Federal land and non-Federal land proposed to be conveyed as mitigation. An assessment of the Federal land is available under different cover (*Phase I Environmental Site Assessment, Blackrock Land Exchange: Disposal of Federal Land*, HDR 2019).

2.0 Site Description

2.1 Location and Legal Description

The Project Area is comprised of 9 parcels of non-Federal land proposed for exchange as well as one parcel of non-Federal land proposed to be conveyed as mitigation in the Blackrock Land Exchange project. **Table 1** lists the Project Area non-Federal parcels.

The Project Area parcels comprise approximately 826 acres of undeveloped land in four non-contiguous blocks, in Bannock County, near Inkom, Idaho. Two of the blocks, comprised of two parcels according to the Bannock County Assessor, are in Township 7 South, Range 36 East (T7S, R36E):

- R4015002300 (mitigation parcel)
- R4015002401

To the southwest are the other two blocks, comprised of eight parcels according to the Bannock County Assessor, are in T7S, R35E:

- R4013009900
- R4013009700
- R4013009600
- R4013009500

- R4013009400
- R4013043100
- R4013043400
- R4013036700

The two blocks in T7S, R36E, sections 6 and 7, are entirely surrounded by Federal land. The two blocks in T7S, R35E, sections 13, 14, 23, and 24, are bound by Federal land to the east, north, and west, and by non-Federal land and/or Interstate 15 (I-15) to the south. Refer to the project vicinity map for the locations of both the Project Area and the Federal land proposed for exchange, and the detail map of the Project Area (**Figure 1, Figure 2,** and **Figure 3**) for further site location details. **Figure 2** presents the Project Area legal description and **Figure 3** presents the Project Area by county parcel numbers.

	R4015002300	Section 6: NW¼, SW¼ NE¼, NW¼ SE¼, NE¼ SW¼

* Parcel IDs per Bannock County Assessor's website:
https://bannock.maps.arcgis.com/apps/webappviewer/index.html?id=dfe86cb077844d8f8b68ba01ac6f7087

The land around the Project Area consists of public and private uses. Undeveloped, BLM-owned Federal land dominates the area north of I-15 and north of the Project Area. Immediately south of I-15, in between the interstate and Portneuf River, are several non-Federal properties, including residences and farmland.

2.2 Site and Vicinity Characteristics

The Project Area (non-Federal land) is located in the Blackrock and Caddy Canyon area, east/southeast of Pocatello, Idaho, in Bannock County (**Figure 2**). It is on the north side of the Portneuf River Valley on the southern edge of the Pocatello Range. The Pocatello Range is a small northeastern branch of the larger Bannock Range. Terrain is steep and mountainous with soils ranging from shallow and rocky to deep and well drained. Elevations in this area range from 4,500 to 6,500 feet above mean sea level. Vegetation consists of native shrub steppe type, with minimal juniper. The Project Area is traversed by an ephemeral stream, which originates on public land to the north. In addition, the offered land contains a natural spring headwaters that flows through Caddy Canyon.

2.3 Area Geology and Hydrogeology

The Project Area is located southeast of the Eastern Snake River Plain between Pocatello and Inkom, Idaho. The Portneuf River is the main surface water feature in the area and is present south of the Project Area, south of I-15. According to the Inkom Quadrangle Geologic Map (Rodger et al, 2006), the Project Area consists of Late Proterozoic formations of the Brigham Group and members of the Pocatello Formation. Deposits of the Brigham Group include the Blackrock Canyon Limestone (limestone and dolomite marble), Papoose Creek Formation (argillite and quartzite), and Caddy Canyon Quartzite (quartzite, conglomerate, and some shale). From the Pocatello Formation, deposits of the laminated quartzite and thinly bedded argillite and phyllite are present in the project area. Holocene loess deposits (windblown silt) are present on hillsides while Holocene aged alluvial fan deposits are present in the southern-most portions of the project area along I-15. Along Blackrock Canyon road are Holocene alluvium deposits consisting of unconsolidated sands, silts, and gravels.

Several faults are present throughout the area, with the Blackrock Canyon fault trending north-south through Blackrock Canyon. Several smaller normal faults are present between Blackrock Canyon and Caddy Canyon, with more in the surrounding areas. The nearest thrust fault is the Bear Canyon Thrust fault near Inkom, Idaho. Folding is also prevalent in the area, with the Blackrock Canyon Fold being present at the surface west of Blackrock Canyon, and present at depth below Caddy Canyon.

The Project Area receives approximately 12 inches of mean annual precipitation. Most of the precipitation occurs from March to May, with secondary peaks occurring during November and December. Temperatures in the region range from a mean daily low of 14.4 degrees Fahrenheit (°F) in January to a mean daily high of 88.0 °F in July.

Shallow groundwater flow direction in the area follows the contours of the terrain and moves toward the Portneuf River. Shallow groundwater flow is expected to move southerly or southwest in the Project Area toward the Portneuf River.

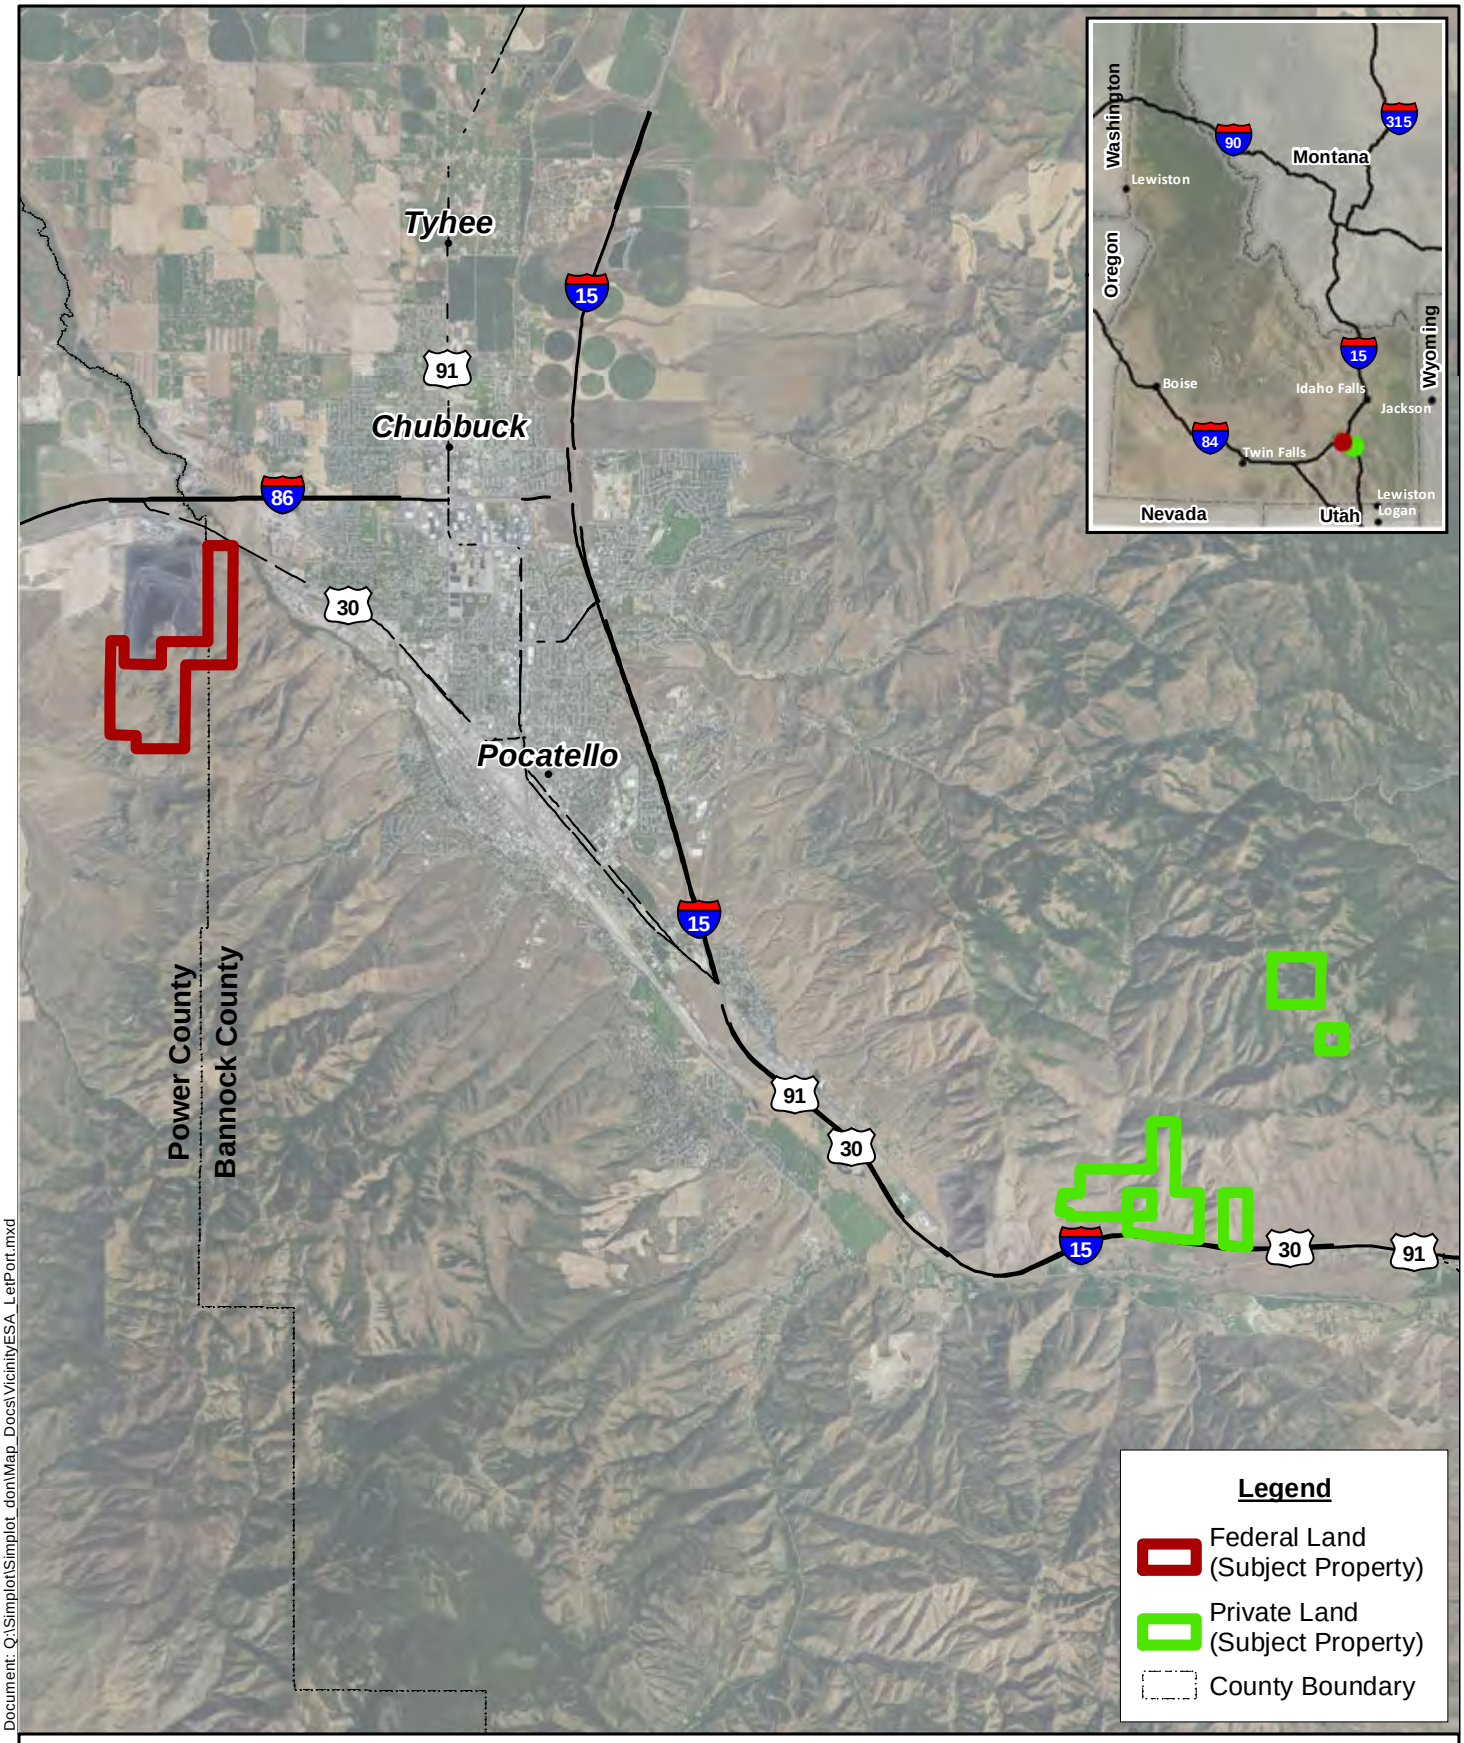

2.4 Current Use of Property and Adjoining Properties

The Project Area consists primarily of undeveloped land, except for cattle grazing and watering, access roads to public lands, and unauthorized recreational activities (shooting, four-wheeling). Adjoining properties includes BLM public land and non-Federal land (undeveloped, residential homes near I-15, and livestock grazing).

2.5 Description of Structures, Roads, and Other Site Improvements

The nearest roads to the two blocks of land in T7S, R36E, are W. Buckskin Road to the north and N. Rapid Creek Road to the east, while I-15 is further south. N. Blackrock Canyon Road runs north-south through the western portion of the western-most Project Area land in T7S, R35E. Most of the Project Area land in T7S, R35S is bordered to the south by I-15. The main access into Blackrock Canyon is via a county road just off of I-15 south of Pocatello. The BLM has acquired an easement from Simplot for a road that connects to the county road, and then runs up Blackrock Canyon for about one-half mile to the public land. An unpaved road is also located along Caddy Canyon that

serves as an access to public lands. An improved spring is located in Caddy Canyon that is used for watering cattle.

3.0 User Provided Information

As part of the all appropriate inquiries (AAI), the report user has the following investigatory responsibilities:

- Providing searches for recorded environmental cleanup liens
- Reporting specialized knowledge of the subject property
- Evaluating the relationship of the purchase price to the value of the property, if not contaminated

For the Project Area, Simplot has indicated that no environmental cleanup liens are filed or recorded against the non-Federal land. Simplot has no knowledge of activity or land use limitations that are in place the Project Area or that have been filed or recorded in a registry.

Specialized knowledge or experience related to the property or nearby properties includes the lead-contaminated soil cleanup and tire dump removal conducted at the non-Federal land. This information is discussed in Section 4.3.

4.0 Records Review

4.1 EDR Database Search Results

HDR contracted Environmental Data Resources, Inc. (EDR) to complete a database search of Federal, state, and tribal environmental records for the Project Area. EDR performed the computerized search for the Project Area on May 30, 2019. The databases included Federal, state, local, and tribal databases as defined by ASTM E 1527-13, plus EDR proprietary databases as research aids.

The EDR search found no listings for the Project Area nor any surrounding properties within the search radius. A complete copy of the EDR environmental database report is included in Appendix A.

4.2 Additional Regulatory Information

4.2.1 Online Sources

Using the Idaho Department of Environmental Quality's (IDEQ) online Waste Management and Remediation Division Facility Mapper (http://www.deq.idaho.gov/waste-mgmt-remediation/remediation-activities/facility-mapper/), HDR searched for the Project Area on July 11, 2019, and found that none of the Project Area parcels is listed.

4.2.2 Agency File Reviews

See Section 4.2.1.

4.3 Historical Use Information

The objective of reviewing historical use information is to develop a history of previous land uses at and in the vicinity of the Project Area, and to assess these uses for potential hazardous materials impacts that may affect the Project Area. HDR reviewed those historical sources that were reasonably ascertainable and likely to provide useful information, as defined by the ASTM standard.

4.3.1 Fire Insurance Maps

The Project Area is undeveloped land with no physical address. There is no Sanborn® Fire Insurance Maps coverage.

4.3.2 Historical Aerial Photographs

Historical aerial photographs are valuable for the environmental assessor to review features of the Project Area and surrounding properties over a long period of time. HDR reviewed historical aerial photographs of the Project Area provided by EDR (Appendix B) for the following years: 1953, 1969, 1974, 1980, 1985, 1992-1993, 1998, 2004, 2009, 2013, and 2017. EDR provided three photos for each year of coverage to ensure the entire Project Area was captured. **Figure 4** illustrates photographic coverage.

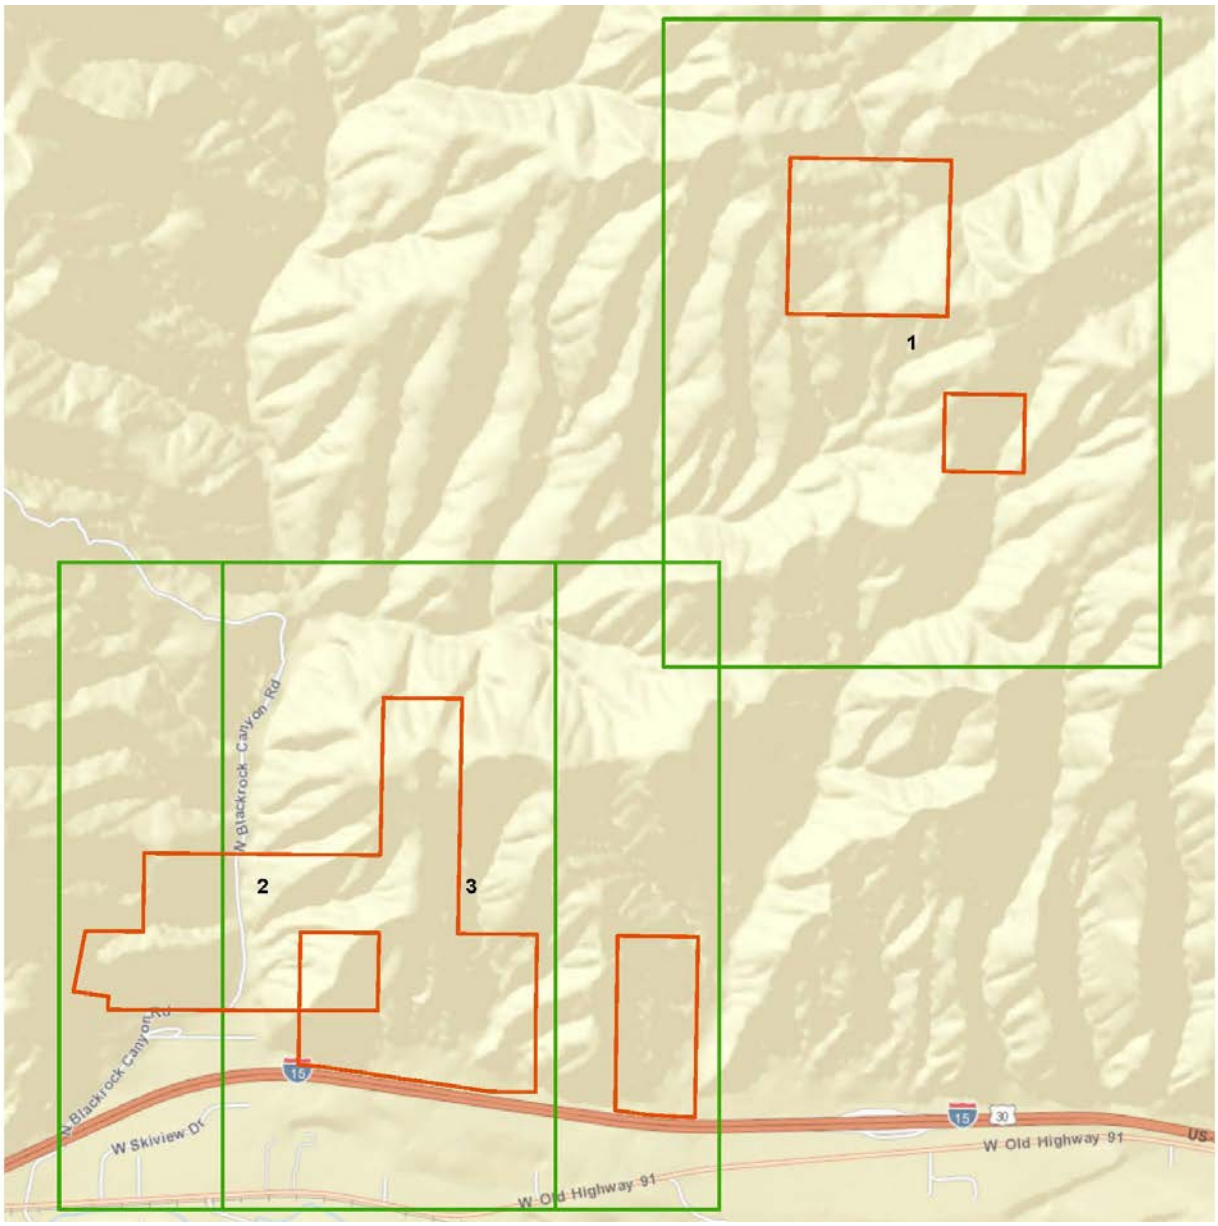

Figure 4. EDR Photographic Coverage
Numbers 1, 2 and 3 in figure relate to the _1, _2, and _3 suffixes in the picture descriptions below.

1953_1: The area was undeveloped land. Unpaved (dirt) roads were visible. On the most north parcel, there is an area (0.25 acres) that is void of vegetation. This area is visible on all aerials including Google Earth 2018 imagery. The area is rocky and may be old land slide area (site reconnaissance did to reveal any RECs).

1953_2: The Project Area was undeveloped land with dirt road visible, including one where present day N. Blackrock Canyon Road exists, which runs north-south through the Project Area. Some residential development (land clearing and structures) was visible south of the Project Area but north of Old Highway 91.

1953_3: The Project Area was undeveloped land. Some residential development was visible south of the Project Are, but north of Old Highway 91.

1969_1: Unchanged from the 1953 photograph.

1969_2: The Project Area was unchanged from the 1953 photograph. I-15 was constructed south of the Project Area and north of the existing residences.

1969_3: The Project Area was unchanged from the 1953 photograph. I-15 was constructed south of the Project Area and north of the existing residences.

1974_1: Unchanged from the 1969 photograph.

1974_2: Unchanged from the 1969 photograph.

1974_3: Unchanged from the 1969 photograph.

1980_1: Unchanged from the 1974 photograph.

1980_2: Unchanged from the 1974 photograph.

1980_3: Unchanged from the 1974 photograph.

1985_1: Unchanged from the 1980 photograph.

1985_2: Partial photograph. The Project Area was unchanged from the 1980 photograph.

1985_3: Partial photograph. The Project Area was unchanged from the 1980 photograph.

1992-1993_1: Unchanged from the 1985 photograph.

1992-1993_2: Unchanged from the 1985 photograph.

1992-1993_3: Unchanged from the 1985 photograph.

1998_1: Unchanged from the 1992-1993 photograph.

1998_2: The Project Area was unchanged from the 1992-1993 photograph. There was a new clearing and potentially a new structure north of the Project Area off of N. Blackrock Canyon Road. N. Blackrock Canyon Road is more readily discernable in the photograph, potentially indicated it was paved.

1998_3: Unchanged from the 1992-1993 photograph.

2004_1: Unchanged from the 1998 photograph.

2004_2: Unchanged from the 1998 photograph for Project Area, some development changes south of the I-15.

2004_3: Unchanged from the 1998 photograph.

2009_1: Unchanged from the 2004 photograph.

2009_2: Unchanged from the 2004 photograph, some development changes south of the I-15.

2009_3: Unchanged from the 2004 photograph.

2013_1: Unchanged from the 2009 photograph.

2013_2: Unchanged from the 2009 photograph, some development changes south of the I-15.

2013_3: Unchanged from the 2009 photograph.

2017_1: Unchanged from the 2013 photograph.

2017_2: Unchanged from the 2013 photograph, some development changes south of the I-15.

2017_3: Unchanged from the 2013 photograph.

4.3.3 Historical Topographic Maps

Historical topographic maps provide an overview of the area relative to potential previous land uses. HDR reviewed historical topographic maps of the Project Area provided by EDR. These maps served to augment information that was gathered in the historic aerial photograph review. The USGS 7.5-minute series topographic maps (Inkom, 1971; Inkom, 2013) and 15-mimute series topographic maps (Pocatello, 1937; Pocatello, 1944) were reviewed, and are provided in Appendix C. The topographic maps show a Union Pacific Railroad track just south of Old Highway 91 as well as Portneuf River just south of the tracks, neither of which were visible in the aerial photographs in the Section 4.3.2. However, overall, the topographic maps show the Project Area has remained virtually unchanged over time.

4.3.4 City Directory Information

There is no physical address for the Project Area, which is comprised of undeveloped land; therefore, there are no search results available for the parcels in city directories.

4.3.5 Environmental Liens, Activity Use Limitations (AULs) and Additional Information

Per the Statement of Services assumptions (Section 1.2), no environmental lien search for the property located at 2105 West Commerce Avenue in Boise, Idaho, was conducted in support of this Phase 1 ESA. The EDR database (Appendix A), however, includes the following environmental lien databases:

- NPL Liens – Federal Superfund Liens - Federal Superfund Liens. Under the authority granted the EPA by CERCLA of 1980, the EPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. EPA compiles a listing of filed notices of Superfund Liens.

The Project Area is not listed in the database. In addition, EDR contains the following related databases to site institutional/engineering controls:

- LUCIS – Land Use Control Information System
- US ENG CONTROLS – Engineering Controls Sites List
- US INST Control – Sites with Institutional Controls
- INST Control – Idaho's institutional controls restricting list

The Project Area is not listed in these databases.

4.3.6 Summary of Previous Environmental Investigations

PREVIOUS PHASE I ESA

In 2009, HDR prepared a Phase I ESA for the Pocatello office of the BLM that reviewed all but one of the same properties for a potential land exchange with Simplot.

- Phase I Environmental Site Assessment, Proposed Blackrock Land Exchange IDI-35337, November 2009

Non-Federal land proposed for exchange in 2009 is also included in the current proposed exchange, with the addition of the area in S6, T7S, R36E to the current proposed exchange (see **Table 1** and **Figure 2**).

The 2009 Phase I ESA reviewed the history of Simplot's and BLM's efforts to complete a land exchange that ultimately date back to an initial proposal for a Blackrock Land Exchange from Simplot to BLM in 1994. Following is a chronology of events:

- April 29, 1994: Simplot submitted a Blackrock Land Exchange proposal to the Pocatello Resource Area, BLM.
- January 3, 1995: Simplot amends proposal to offer an additional parcel of non-Federal land.
- 1995-1996: *Feasibility Report/Analysis and Agreement to Initiate* is developed and approved. An environmental assessment (EA) is started.
- 1996-2001: Exchange put on hold.
- 2001: Simplot renews talks with BLM to continue processing the proposed exchange and amends the proposal to include more acreage of both non-Federal and Federal land.
- 2002: HDR conducted Phase I ESA for BLM
- 2007: HDR updated the Phase I ESA for BLM
- 2009: HDR updated the Phase I ESA for BLM

The 2009 Phase I ESA summarized site reconnaissance conducted in 2002, 2007, and 2009. The 2009 report findings for the Project Area included the following:

- Review of government records revealed an HREC associated with the non-Federal land pertaining to soil lead remediation, stemming from an unauthorized shooting range discovered in 1996. Simplot created a permanent soil cover over the lead-contaminated area in 1996 and moved the drainage course west of the soil cover to prevent future flows from eroding the fill.
- Site reconnaissance in 2002 revealed a tire dump (approximately 100 tires) in a dry draw on a portion of the non-Federal land offering. Simplot removed the tires in 2002.
- The 2009 Phase I ESA did not reveal any new findings since the 2007 Phase I ESA.

5.0 Site Reconnaissance

5.1 Methodology and Limiting Conditions

HDR conducted a site reconnaissance of the Project Area by observing site conditions from accessible roads and walking areas that were accessible while avoiding unsafe areas such as cliffs and steep terrain. HDR personnel also used binoculars to observe land features and used Google Earth for assessing land surface features. Because of the large acreage involved, HDR's team did not physically walk all areas, however, HDR attempted to observe the entire acreage through visual observation, including viewing inaccessible areas through binoculars.

5.2 Observations

On June 10 through June 13, 2019, HDR conducted a reconnaissance of the Project Area and surrounding properties. In addition to assessing the Project Area for ASTM-defined RECs, HDR also assessed the area for solid waste and physical hazards, where BLM defines physical hazards as follows:

> *Man-caused situations, such as mine shafts, high walls, unsafe bridges, primitive roads, or similar features, where the potential exists for injury or death to visitors on the lands before the disposal is completed* (BLM 2012).

The Project Area consists of 10 parcels in four separate land blocks that encompass approximately 826 acres. The largest contiguous block, comprised of 6 parcels, is the western-most portion of the Project Area. East of the largest block is another block comprised of two parcels in Caddy Canyon. The two remaining blocks are smaller, square parcels to the northeast. None of the parcels has been developed and all roads through or accessing the parcels are unpaved. **Figure 5** shows features identified during site reconnaissance.

Blackrock Canyon Road runs north-south through the western portion of the largest parcel (R4013009700), which is part of the largest, western-most block of the Project Area. Up the main canyon on the east side of the road (canyon runs east-west), there is a flat linear feature (an old road or trail) that runs from the bottom of the canyon up to a wooded area and rock outcrops halfway up the canyon. At one of the rock outcrops is a potential mine shaft (entrance to an underground mine) just up the hillside from the old road or trail feature. There is also an area on the ridgeline on the south side of this canyon that is flatter and may have been dug out at one point. For safety, HDR did not attempt to enter or go to the edge of the adit (see Photos 10 through 12, Appendix D). Based on the amount of cuttings (materials excavated from the adit or shaft), it is HDR's opinion that the adit is not very deep and may have been an exploratory excavation rather than an active mine. Regardless, this is a physical hazard. No solid waste or other evidence of mining activity was observed in this area.

On the east side of the western-most block (on other side of the central ridge) on parcel R4013043400, there is a hole on the west side of the hill that looks like an animal den. There was also scattered debris (a pallet, some beer cans, wire, and some metal targets) in parcel R4013036700. In parcel R4013009600, along the main north-south running dirt road (the only dirt road on the east side of the western-most block that runs across the whole property), there is a

common shooting area to the north with a large metal target, scattered broken clay pigeons, and shells. Along the drainage on the east side of this road (still in parcel R4013009600) are several berms that seem to be manmade that run across the drainage (dirt or rock, only 10 feet wide or less depending on the size of the drainage at that location).

On the far east side of the large block (parcel R4013043400), there is a target shooting on the east side of a dirt road. There were several whole clay pigeons on a rock, shells, glass, broken clay pigeons, and broken electronics next to the road, and targets set up on a rock just off of the road. On the west side of this road, there are four dugout areas on the hillside.

In the Caddy Canyon block (parcel R4013043100), there were two tires in the sagebrush on the southeast corner of the property and a campfire ring on the west side of the road near the east central side of the property (did not appear to have been used). At the northeast corner of the block (in parcel R4013009500) there was a metal tank/basin set into the ground that a spring runs into (could hear water flowing into it) and a square concrete basin, containing solid waste and a tire. Just downslope is a concrete tank, partially buried, that is appears to be used for water storage to cattle. This tank had no lid and is a physical hazard (see photos 33 and 34, Appendix D). Just off property next to the main dirt road running up the canyon was a watering trough fed by a pipe that was coming from the direction of the spring (might be piped from the metal basin collecting water).

The two smaller square parcels to the northeast (parcels R4015002401 and R4015002300) are remote compared to the other parcels and, except for dirt roads used for four-wheeling, no solid waste, physical hazards, or hazardous materials were observed.

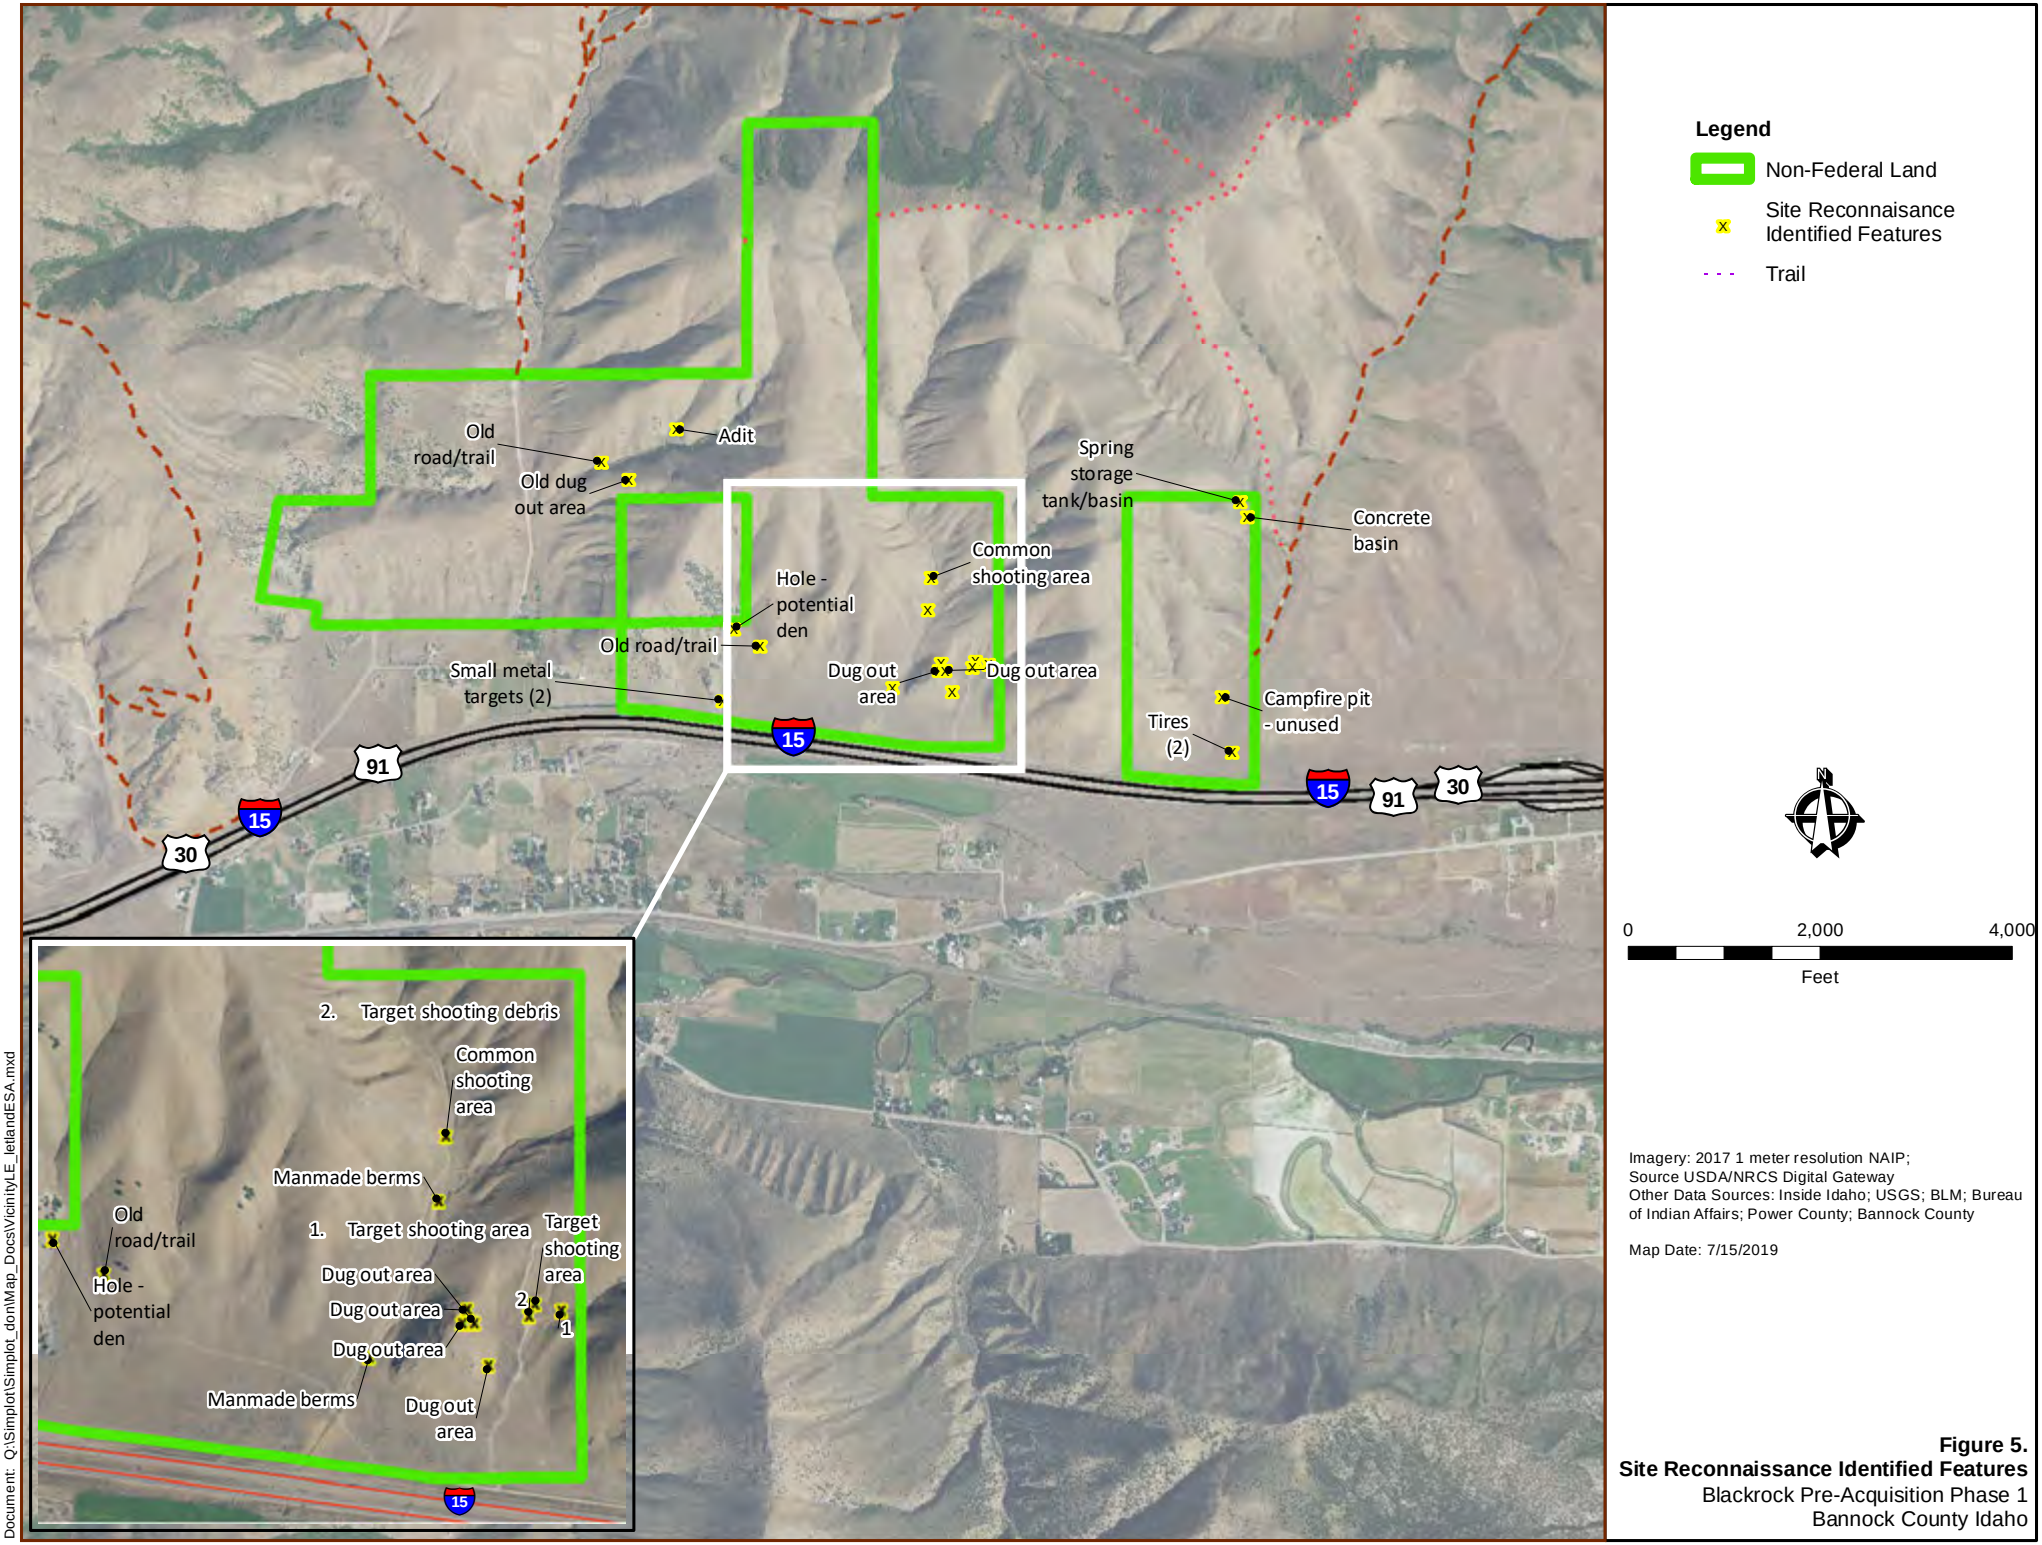

Photographs taken during the site reconnaissance are located in Appendix D. **Table 2** summarizes sit observations.

Table 2 – Summary of June 10 through 13, 2019, Site Visit Observations

Feature	Comment/Observations
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Project Area	Not observed.
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)	Not observed.
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use	Not observed.
Unidentified Substance Containers	None
Electrical or Mechanical Equipment Likely to Contain Fluids	None observed.
Interior Stains or Corrosion	No structures on-site.
Strong, Pungent, or Noxious Odors	None
Pools of Liquid	None
Drains, Sumps, and Clarifiers	None observed.
Pits, Ponds, and Lagoons	None (note water tank presents physical hazard, see **Figure 5** for location)
Stained Soil or Pavement	No soil staining observed.
Stressed Vegetation	None.

Table 2 – Summary of June 10 through 13, 2019, Site Visit Observations

Feature	Comment/Observations
Solid Waste Disposal or Evidence of Fill Materials	Some trash scattered along access roads. Gun shells found various locations, two areas identified as small shooting ranges. See **Figure 5** for locations.
Waste Water Discharges	No observed.
Wells	None observed, spring on eastern most parcel.
Septic Systems	Not observed.
Physical Hazards	Abandoned mine Shaft and concrete water tank present potential physical hazards.

5.3 Solid Waste and Physical Hazards

See **Figure 5** and **Table 2**.

5.4 Utilities and PCBs

A power line traverses the Project Area in a northeast/southwest direction through Section 13. According to EDR, this is a 46 kilovolt (kV) line. No transformers were observed during the site visit.

5.5 Vapor Intrusion Potential

According to EPA guidance, vapor intrusion is the general term for the migration of the vapor phase contaminants into buildings or structures. These contaminants are primarily volatile organic compounds (VOCs) and some heavy metals (mercury). These contaminants migrate from any subsurface contaminant source, such as contaminated soil or groundwater, through the soil and into an overlying building. The two general classes of VOCs that account for a large number of soil and groundwater contamination sites in the United States are petroleum hydrocarbons and non-petroleum hydrocarbon fuel additives, and chlorinated solvents (drycleaners and de-greasers).

The potential for vapor intrusion was evaluated for the Project Area. Based on the current and historical use of the Project Area, and the lack of VOC sources in the immediate vicinity, vapor intrusion is not considered to be of concern for the Project Area.

6.0 Interviews

HDR conducted a phone interview with Mr. Bryce Anderson of the BLM on June 11, 2019. Mr. Anderson is the BLM project manager for the land exchange project and is familiar with land management and hazardous materials issues on BLM land in the Pocatello area, this includes the adjacent BLM land in the Black Canyon and Caddie Canyon areas. He is also familiar with general land issues on the non-Federal land. The following is a summary of the interview findings regarding the Project Area (non-Federal lands):

- Mr. Anderson pointed out two potential physical hazards that he requested that HDR review as part of the Phase 1 ESA. The first was a potential abandoned mine working (he provided HDR with coordinates) that he observed on Google Earth. HDR confirmed this observation (see Section 5.0). Secondly, he had observed a concrete tank on the east parcel (R4013009500) and requested that HDR review this tank as a possible physical hazard (public could access the top entrance to the tank, see Section 5.0).
- Mr. Anderson was not aware of any hazardous materials issues for the non-Federal land, however, he indicated that target shooting was common in the area and the HDR should look for potential shooting ranges during its site reconnaissance.

In addition, HDR interviewed Monty Johnson of Simplot. Mr. Johnson is familiar with the non-Federal land holdings for the past 15 years. Mr. Johnson indicated he is not aware of any RECs associated with the Project Area, other than those environmental concerns and issues raised in the previous Phase 1 ESA.

7.0 Additional Services/ Non-Scope Considerations

None.

8.0 Findings

HDR has conducted a Phase I ESA of the Project Area, approximately 826 acres of non-Federal land (Project Area) proposed for exchange or mitigation in the Blackrock Land Exchange with BLM near Pocatello, Idaho. Simplot and BLM requested a Phase I ESA of the aforementioned properties for a potential land exchange for Federal lands.

The Phase I ESA was performed in accordance with the scope and limitations of ASTM Practice E 1527-13 and BLM requirements. Any exceptions to, or deletions from, this practice are described previously in this report. Included in this Phase I ESA are a summary of the site reconnaissance conducted on June 10 through June 13, 2019 the review of the environmental database search report, historical data sources, and other records, and interviews with available personnel knowledgeable about the Project Area.

General findings of this assessment include the following:

- Several target shooting areas were identified:
    - East side of a dirt road in parcel R4013043400. HDR observed several whole and broken clay pigeons, shells, glass, and broken electronics next to the road, and targets set up on a rock just off of the road.
    - In parcel R4013009600, along the main north-south running dirt road (the only dirt road on the east side of the western-most block that runs across the whole property), there is a target shooting area to the north with a large metal target, broken clay pigeons, and shells.
- In parcel R4013043100, there were two tires in the sagebrush on the southeast corner of the property and a campfire ring on the west side of the road near the east central side of the property (did not appear to have been used).
- At the northeast corner of parcel R4013009500 there is a metal tank/basin set into the ground that a spring runs into (could hear water flowing into it) and a square concrete basin, containing solid waste and a tire. Just off property next to the main dirt road running up the canyon was a watering trough fed by a pipe that was coming from the direction of the spring (might be piped from the metal basin collecting water). The concrete basin is a physical hazard in that the top lid is missing and the tank is accessible to the public.
- East of Blackrock Canyon Road (parcel R4013009700), at one of the rock outcrops is a mine shaft (entrance to an underground mine). This is a physical hazard. No solid waste or other evidence of mining activity was observed in this area. The entrance is hidden by vegetation and there were no signs of entry (no paths from public accessing entrance).

- The 2009 Phase I ESA summarized site reconnaissance conducted in 2002, 2007, and 2009. The 2009 report findings for the Project Area included the following:
    - Review of government records in 2009 (note this did not show up in the 2019 EDR records search) revealed an HREC associated with the non-Federal land pertaining to soil lead remediation, stemming from an unauthorized shooting range discovered in 1996. Simplot created a permanent soil cover over the lead-contaminated area in 1996 and moved the drainage course west of the soil cover to prevent future flows from eroding the fill.
    - Site reconnaissance in 2002 revealed a tire dump (approximately 100 tires) in a dry draw on a portion of the non-Federal land offering. Simplot removed the tires in 2002.
    - The 2009 Phase I ESA did not reveal any new findings since the 2007 Phase I ESA.

9.0 Opinions

HDR offers the following opinion as to whether the all appropriate inquiries (AAI) conducted in accordance with 40 CFR 312 has identified conditions indicative of releases or threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances as well as the identification of solid waste issues, physical hazards, and non-scope issues in accordance with BLM Manual Handbook H-2000-01 on, at, in, or to the Project Area (non-Federal land).:

- The updated 2019 Phase I ESA has not revealed any RECs associated with the Project Area. HDR identified several areas where target shooting occurs (see Section 5.0). The use of these shooting areas appears to be disperse (not high density use) and are not considered to be a shooting range (defined as areas where vegetation is devoid due to high human traffic with high density of target waste). Rather, for the observed areas, shell casings, bullets, targets, and debris were scattered.
- In addition to target waste, a pallet, wire, tires camper shell, and scrap metal are present within the non-Federal land.
- HDR identified two physical hazards as per BLM requirements as part of a Phase I ESA (see **Figure 5** for locations):
    - Mine shaft
    - Concrete water basin (tank) without lid.

10.0 Additional Investigations and Recommendations

10.1 Additional Investigations

No additional investigation is recommended in order to detect the presence of hazardous substances or petroleum products.

10.2 Recommendations

Recommendations included in this report were developed through the investigative procedures described in the Scope of Services, Significant Assumptions, and Limitations sections of this report (see Section 1.2). These findings should be reviewed within the context of the limitations provided in the Limitations section.

HDR makes following recommendations:

- BLM and Simplot should negotiate mitigation of the two physical hazards described in Section 5.0 and Section 9.0 prior to BLM acceptance of title to the property.
- The solid waste (target trash, pallet, wire, tires, camper shell, and scrap metal) should be removed prior to acquisition.
- The report user should consider the “shelf life” of Phase I documents in determining risk. ASTM E 1527-13: 4.6 states that a conforming “Phase I” report is valid for a period of 180 days, and may be updated during the 180 days to 1-year timeframe. The report is valid for use in any of the CERCLA defenses ONLY if it is updated within this time frame. If greater than one year passes from the final report date, the Phase I effort would need to be repeated to remain in compliance with ASTM and the “All Appropriate Inquiry” protection.

11.0 Data Gaps

The ASTM E 1527-13 standards require a listing of “data gaps,” including data failure, encountered during the investigative process that may affect the validity of the conclusions drawn by the environmental professional. The ASTM E 1527-13: 12.7 standard also requires that the environmental professional estimate the relative importance of the data gaps. Generally, gaps in available data are related to the availability of historical data sources for specific sites of concern. The environmental professional uses multiple historical data sources as a method to provide coverage for data gaps. Historical information is collected on a recurring basis, and the passage of time between data sets may or may not constitute a significant gap in data coverage.

For this project, the following items may constitute a data gap as defined by ASTM E 1527-13:

- Absence of Sanborn fire insurance maps

The inability to obtain and review the Sanborn fire insurance maps does not present a significant data gap, because of the presence of other supporting historical information.

12.0 Conclusions

Based upon the above-detailed Findings and Opinions, HDR concludes that no RECs have been identified for the Project Area, as enumerated in Findings (Section 8.0). The following statement is required by ASTM E 1527-13 as a positive declaration of whether RECs were found:

> *HDR has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527 of non-Federal land proposed for exchange with BLM in the Blackrock Land Exchange. Any exceptions to, or deletions from, this practice are*

described in previous sections of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

13.0 Deviations

None.

15.0 Environmental Professional Statement

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in Section 312.10 of 40 CFR Part 312.

16.0 Results of All Appropriate Inquiries

This Phase I has revealed no evidence of hazardous substances, petroleum products, or environmental conditions on this real property. No further inquiry is needed for purposes of all appropriate inquiries; therefore, this property is suitable for acquisition.

17.0 Approvals

Michael R. Murray, PhD
Vice President/Project Manager

18.0 Qualifications of Preparing Consultant

This Phase I ESA was performed by the following HDR personnel:

Mr. Michael R. Murray, Ph.D., HDR's qualified environmental professional, as defined by ASTM Practice E 1527-13, has 28 years of experience in ESAs, soil and groundwater investigations and remediation, wastewater/biosolids land application, wetland delineation and mitigation, statistical analysis and design, mine site closures, hazardous materials management, biological assessments, database management, research, project management, and teaching. Dr. Murray's responsibilities have included technical lead, project planning, field supervision, schedule and cost control, public relations, and expert witness support. He has conducted over 100 ESAs.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/11/2019
Date Data Arrived at EDR: 04/18/2019

Next Scheduled EDR Contact: 07/15/2019
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/11/2019

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019
Date Data Arrived at EDR: 04/05/2019

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/11/2019
Date Data Arrived at EDR: 04/18/2019
Date Made Active in Reports: 05/23/2019
Number of Days to Update: 35

Next Scheduled EDR Contact: 07/29/2019
Data Release Frequency: Quarterly

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 04/11/2019

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ID SHWS: This state does not maintain a SHWS list. See the Federal CERCLIS list and Federal NPL list.

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Next Scheduled EDR Contact: 06/17/2019
Data Release Frequency: Varies

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/24/2019
Date Data Arrived at EDR: 02/26/2019
Date Made Active in Reports: 04/17/2019

Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 04/11/2019

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by HDR were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Blackrock Canyon (west half of the largest parcel, R4013009700)

Photo 1. From the west side of Blackrock Canyon Road, looking E toward Blackrock Canyon Road.

Photo 2. Looking south down Blackrock Canyon Road.

Photo 3. Looking west toward Blackrock Canyon Road. Ridge on the left is where photo 1 was taken.

Photo 4. Looking north east toward central ridge separating the west and east half of the largest and western-most Project Area land block. Potential prospect (dug out) area is visible on the center right of the picture.

Photo 5. Potential old prospect area (flat where we were standing) on ridge running east to the top of the central ride separating the east and west half of the land block.

Photo 6. Potential small dug out area (center of the photo).

Photo 7. Looking southeast from the central ridge into the eastern portion of the land block. I-15 is visible in the background.

Photo 8. Looking west from the top of the central ridge. Blackrock Canyon Road is visible in the background (center).

Photo 9. Looking west down old road or trail leading up the canyon to the adit or shaft.

Photo 10. Looking east toward waste rock dump below adit or shaft (center of the photo).

Photo 11. Looking south toward the adit or shaft (view blocked by vegetation).

Photo 12. Looking down adit/shaft.

Photo 13. View of abandoned mine shaft looking south. Photograph taken by Bryce Anderson on 8/15/2019.

Photo 14. View of Blackrock Canyon looking southwest from shaft. Photograph taken by Bryce Anderson on 8/15/2019.

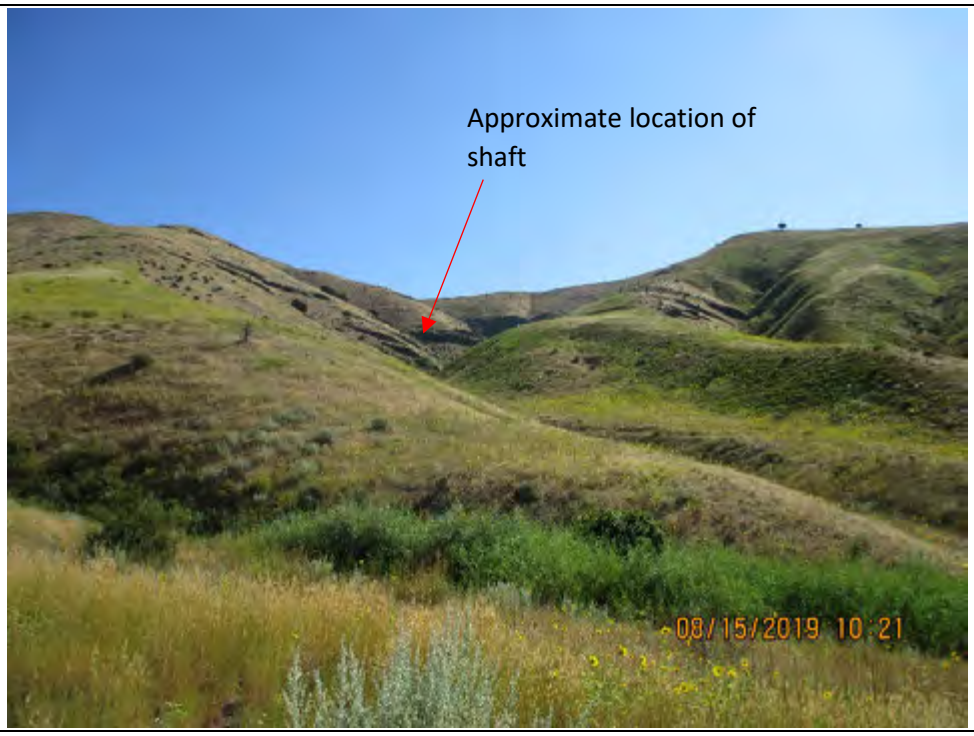

Photo 15. View of drainage where abandoned mine shaft is located looking east from Blackrock Canyon Road. Photograph taken by Bryce Anderson on 8/15/2019.

Photo 16. Addition abandoned mine features were observed, but not considered physical safety hazards. A collapsed adit and waste rock dump was also observed at: 42.809979°, -112.324790°. View of collapsed adit and waste rock dump looking east up drainage. Photograph taken by Bryce Anderson 8/15/2019.

Photo 17. Looking southeast along potential old trail or road.

Photo 18. Looking south. Hillside from the central ridge comes down on the right side of the picture.

Photo 19. Roll of wire lying on the potential old road or trail from Photo 9.

Photo 20. Looking north at old pallet. Central ridge is off photo to the left.

Photo 21. Abandoned camper shell observed in stream drainage along the east side of Blackrock Canyon Road at 42.808625°, -112.329751°. Photograph taken by Bryce Anderson on 8/15/2019.

East half of the largest, western-most Project Area block

Photo 22. Metal targets sitting against hillside leading up to the central ridge in parcel R4013036700). Look like just general target practice, not a shooting range.

Photo 23. Debris on the east side of the central ridge.

Photo 24. Looking toward hole in the side of the hill in parcel R4013043400 (central ridge is to the right off photo). Hole is in the upper center of the photo.

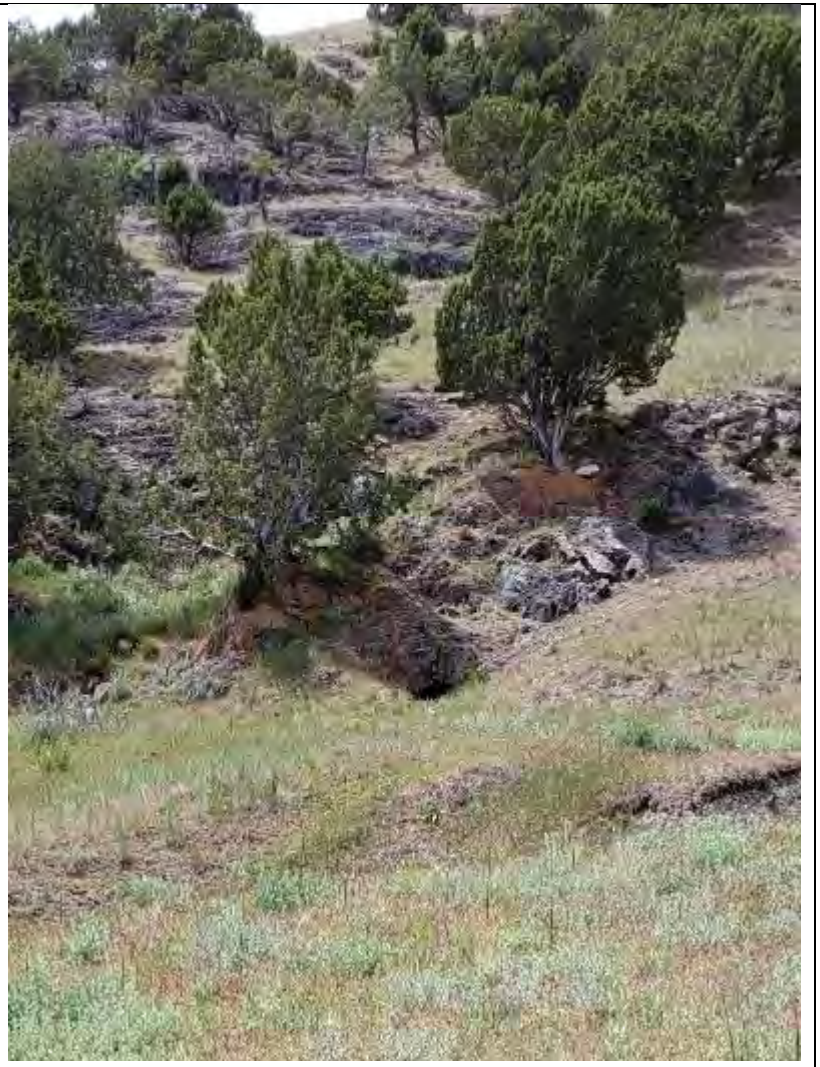

Photo 25. Close-up of the hole. Did not approach too close as it looked like it might be a den.

Photo 26. Agricultural scrap metal along main north-south running road on the east side of parcel R4013009600. Some clay pigeon fragments and shells nearby.

Photo 27. Berm in the center of the picture in the drainage, east of the large metal target. Several others are scattered to the south in the same drainage (some of rock).

Photo 28. Looking north along road on the far east edge of parcel. Shooting range is to the right, off photo.

Photo 29. Broken clay pigeon in the shooting area.

Photo 30. Broken pieces of electronics used in the shooting area.

Photo 31. Broken glass (very thick glass) in the shooting area.

Photo 32. Some of the broken bottles used as targets in the shooting area.

Photo 33. Looking east from road toward shooting range. The rock outcrop in the center is a main target area and there are some clay pigeons on a rock farther east.

Photo 34. Looking east at rock in the center of the picture. There are several whole clay pigeons sitting on top.

Photo 35. Looking west from shooting range toward three prospect areas on hillside.

Photo 36. Looking southwest from shooting range toward fourth prospect area.

Caddy Canyon

Photo 37. Fire pit on west side of the road headed up Caddy Canyon on parcel R4013043100.

Photo 38. Looking at concrete basin near spring at the northeast corner of parcel R4013009500.

Photo 39. Looking into concrete basin.

Photo 40. Solid waste and tire inside concrete basin. Photograph taken by Bryce Anderson on 8/15/2019.

Photo 41. Metal basin holding spring water (can hear the water running into it).

Photo 42. Looking east from above the spring.

Photo 43. Looking northeast at water trough off-property that appears to be fed by a pipe coming from the spring (spring is up the canyon to the left.

RE: Proposed Simplot Blackrock Canyon Exchange [T7S R35E Sec. 14]

Dear Mr. Kotansky,

I concur based on the information provided in documents concerning the investigations and removal of hazardous materials at the proposed Simplot Blackrock Canyon exchange properties, other agency contacts, recent site photographs and inspection of the parcel, at this time, this facility appears to pose minimal to low risk to human health and the environment as long as the intended land use status and management practices remains as proposed.

If there are any further questions concerning this parcel of land, please contact me at the above address or by phone at (208) 736-2190.

Sincerely,

Tom Askew
Hazardous Waste Science Officer

Re: Phase I Environmental Site Assessment Report Submittal
Blackrock Land Exchange: Disposal of Federal Land, Alternative B
Bannock and Power Counties, Idaho

Dear Wendy:

We are pleased to provide you with the above-referenced Phase I Environmental Site Assessment (ESA) report. The attached report presents our methodology, findings, opinions, conclusions, and recommendations regarding environmental conditions at the project site.

HDR appreciates the opportunity to serve the J.R. Simplot Company on this important project. If you have any questions or comments, please feel free to contact me at 208-387-7033 or mike.murray@hdrinc.com.

Sincerely,

HDR ENGINEERING, INC.

Summary

HDR Engineering, Inc. (HDR) conducted a Phase I Environmental Site Assessment (Phase I ESA) of approximately 711 acres of Federal land managed by the U.S. Department of the Interior Bureau of Land Management (BLM) that extends from Power County to Bannock County, in Pocatello, Idaho. The Phase I ESA has been prepared for J.R. Simplot Company (Simplot) and BLM for Federal land being considered for exchange under the Blackrock Land Exchange. The proposal involves exchange of the approximately 711 acres of Federal land adjacent to the Don Plant for approximately 667 acres of non-Federal land currently owned by Simplot. Simplot has proposed as mitigation an additional 159 acres of non-Federal, Simplot-owned land that would be conveyed to BLM.

The property, referenced herein as the Project Area, consists of approximately 711 acres of Federal land proposed for exchange under the Blackrock Land Exchange. Refer to the project location map and site detail map (**Figure 1** and **Figure 2**) for further detail.

This Phase I ESA focuses on the Federal land (Project Area) that would be disposed of in exchange for non-Federal land. An assessment of the non-Federal land is available under different cover (*Phase I Environmental Site Assessment, Blackrock Land Exchange: Pre-acquisition of Non-Federal Land*, HDR 2019a). A previous Phase I ESA proposing a different configuration of Federal land (Alternative A) for disposal was prepared in 2019 (HDR 2019b); there is some overlap in Federal land suggested in this proposed Alternative B.

This Phase I ESA assessed for the presence of recognized environmental conditions (RECs) that may adversely affect the project area, and was conducted in accordance with the scope and limitations of the ASTM International (ASTM) Practice E1527-13. In addition, the Phase 1 ESA follows the requirements of BLM's H-2000-02 Environmental Site Assessments for Disposal of Real Property (Release 2-229, August 21, 2012). This report includes a summary of the site reconnaissance conducted on June 11, a review of environmental databases, a review of historical data sources, environmental lien search, and personal interviews. Any exceptions to or deletions from these ASTM and BLM practices are described later in this report.

Findings and Conclusions

General findings of this assessment include the following:

- The Project Area is 711 acres of Federal land (referred to as Alternative B) proposed for exchange in the Blackrock Land Exchange project, in Bannock and Power counties near Pocatello and Inkom, Idaho. The land around the Project Area consists of a mix of industrial, residential, public, and tribal uses. Fort Hall Reservation belonging to the Shoshone-Bannock Tribes dominates the area west of the Project Area. Immediately north of much of the Project Area is the Eastern Michaud Flats (EMF) site. The EMF site is a Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)-regulated Superfund site comprised of Simplot's Don Plant facility and the previous FMC Corporation (FMC) phosphorus plant.

- Review of government records and historical sources identified the Project Area as being within the EMF Superfund site, characterized as the Offplant Operating Unit (OU)[1]. Elevated levels of some metals and inorganics have been identified in surface soils. Elevated fluoride has been identified in vegetation. Superfund risk assessment identified no human health risk and marginal ecological risk due to fluoride in vegetation. No remedial action has been proposed by the U.S. Environmental Protection Agency (EPA) for the Project Area.
- The Project Area at latitude/longitude 42.877/-112.521 is identified as the Pocatello Moving Target Range in the FUDs database (program ID: F101D0119). The same location is also listed in the unexploded ordnance (UXO) database. The properties listed in the Formerly Used Defense Sites (FUDS) database were (are) Federal lands that the U.S. Department of Defense (DoD) used. The FUDs database was established in 1986 for assessment and the U.S. Army Corps of Engineers (Corps) led cleanup efforts where deemed necessary. The UXOinfo.com site list the site as a FUDS site but indicates that the history as "no data available." HDR obtained records from the Corps regarding the Pocatello Moving Target Range (Appendix E). The range was used by the War Department in 1943 and 1944 as a moving target range over a 4,494 acre area (the exact locations remains uncertain but it included present-day, BLM-managed land in the Pocatello area, and likely included the Project Area). Inspections were conducted in 1991, no hazards were identified. The Corps concluded, "since no hazardous or toxic waste was discovered, this site is recommended for no further action."
- In 2013, Simplot had a release of gypsum from a diked area and some gypsum entered onto BLM land near the southern end of the gypstack. Simplot reported the release and the Idaho Department of Environmental Quality (IDEQ) oversaw the cleanup of the material. IDEQ considers the release mitigated.

Opinions

HDR has reviewed the stated data sources, which are part of the ASTM E 1527-13 assessment protocol. Based upon the review of the data, HDR has developed the following professional opinion and statement.

HDR has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527.13 and BLM Manual Handbook H-2000-02 for the Project Area. Any exceptions to, or deletions from, this practice are described in Section 11.0 of this report. This assessment has revealed no evidence of RECs in connection with the property, except for the following:

- The Project Area is located within the Offplant OU of the EMF Superfund site. The ROD identifies the measures to be taken by Simplot and FMC to address site impacts, including the Offplant OU. No remedial action has taken place in the past, nor has been proposed for the Federal lands, including the Project Area. This portion of the Project Area is considered a CREC.
- The area around latitude/longitude 42.877/-112.521 is listed in the FUDs database and is not considered a REC based on information provided by the Corps (see Appendix E).

[1] The Offplant OU of the EMF Superfund site is the aerial extent of all land, including federal, private, and tribal land, surrounding the FMC and Simplot plants with contamination origination from the plants.

- The release of gypsum from a diked area onto the Project Area has been mitigated and is not considered a REC.

Recommendations

Recommendations included in this report were developed through the investigative procedures described in the Scope of Services, Significant Assumptions, and Limitations sections of this report (see Section 1.2). These findings should be reviewed within the context of the limitations provided in the Limitations section.

Recommendation 1

This assessment has revealed no evidence of hazardous substances, petroleum products, or recognized environmental conditions and/or CERCLA 120(h) concerns on this real property. No further inquiry is needed for purposes of appropriate inquiry; therefore, this real property is suitable for disposal.

Recommendation 2

Consider the “shelf life” of Phase I documents in determining risk. ASTM E 1527-13: 4.6 states that a conforming “Phase I” report is valid for a period of 180 days, and may be updated during the 180 days to 1-year timeframe. The report is valid for use in any of the CERCLA defenses ONLY if it is updated within this time frame. If greater than one year passes from the final report date, the Phase I effort would need to be repeated to remain in compliance with ASTM and the “All Appropriate Inquiry” protection.

1.0 Introduction

1.1 Purpose

The purpose of this Phase I environmental site assessment (Phase I ESA) is to document the evaluation of the project lands for indications of recognized environmental conditions (RECs). ASTM International (ASTM) Practice E 1527-13 defines the following key terms:

REC: The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions (see definition below).

ASTM E 1527-13 defines release as a release of any hazardous substance or petroleum product shall have the same meaning as the definition of "release" in Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), 42 United States Code (U.S.C.) § 9601(22)).

Historical REC (HREC): A past release of any hazardous substances or petroleum products that has occurred in connection with the property, and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority. The property is not subject to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Controlled REC (CREC): A REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as documented by the issuance of a No Further Action [NFA] letter or equivalent, or meeting risk-based criteria established by the regulatory authority). Hazardous substances or petroleum products are allowed to remain in place, subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

De minimis: A condition that generally does not present a threat to human health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not RECs, historical RECs nor CRECs.

Business Environmental Risk: A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.

Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.

In addition the ASTM defined RECs, the Phase 1 ESA includes addressing solid waste and physical hazards issues. Where BLM defines physical hazards are (BLM 2012):

> *Man-caused situations, such as mine shafts, high walls, unsafe bridges, primitive roads, or similar features, where the potential exists for injury or death to visitors on the lands before the disposal is completed.*

It is BLM policy that locations of sites must be identified on site maps, a detailed description be provided, and photo documentation be included in the ESA report.

1.2 Scope of Services, Significant Assumptions, and Limitations

The services provided for this project consisted of the following:

- Provide a description of the Project Area, including current land uses (Section 2.1 – 2.2)
- Provide a general description of the topography, soils, geology, and groundwater flow direction (Section 2.0)
- Review reasonably ascertainable and reviewable regulatory information published by Federal, state, local, and tribal, environmental agencies pertaining to the Project Area (Section 4.0 in total)
- Review historical data sources for the Project Area, including aerial photographs, topographic maps, fire insurance maps, city directories, and other readily available development data (Section 4.3 in total)
- Conduct an area reconnaissance and an environmental review—including a visual review of adjoining properties—with a focus on indications of hazardous substances, petroleum products, polychlorinated biphenyls (PCBs), wells, storage tanks, solid waste disposal pits and sumps, and utilities. In addition review site for physical hazards as defined above (Section 5.0 in total)
- Interview current owner of the Project Area and interview other persons with knowledge of the development history of the Project Area (Section 6.0 in total)
- Determine deviations in methodology that results in data gaps in the information obtained and comment on their significance in identifying RECs for the Project Area (Section 11.0)
- Prepare a written report of methods, opinions, and findings and conclusions (Sections 9.0 and 10.0 in total).

The goal of this scope of services is to assist the user in identifying conditions in the project area that may indicate risks regarding hazardous materials storage, disposal, or other impacts. The resulting report may qualify the user for relief from liabilities as one of three “defenses” identified in the 2002 Brownfields Amendments to CERCLA, Section 9607 (All Appropriate Inquiry [AAI] subsections). These three defenses include:

1. The “innocent landowner” defense to potential liabilities under 42 U.S.C. § 9601
2. The “contiguous project corridor owner” defense pursuant to 42 U.S.C. § 9607q
3. The “bona fide prospective purchaser” defense pursuant to 42 U.S.C. §9607r

Federal regulations at (42 U.S.C §9601(35)(A) & (B),§9607(b)(3), §9607(q); and §9607(r)), promulgated by the United States (U.S.) Environmental Protection Agency (EPA), require that

liability release be based (in part) on completion of AAI prior to purchase of a property. Those inquiries are documented by Phase I reports, or ESAs. EPA has agreed that the recently developed ASTM guidance (ASTM Practice E 1527-13: 3.2.6) specifies and interprets AAI requirements.

A user is defined by ASTM Practice E 1527-13: as the party seeking to use Practice E 1527 to complete an ESA of the project area and may include a potential purchaser of land in the project area, a potential tenant of the Project Area, an owner of land in the project area, a lender, or a project area manager. Investigative areas not included in the standard ASTM ESA scope include: asbestos, lead-based paint, lead in drinking water, radon or urea formaldehyde, wetland issues, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, and high voltage power lines.

Indoor air quality from sources such as mold and asbestos is not included in the ASTM standard except to the extent that indoor air impacts are related to Superfund releases and/or caused by releases of hazardous substances into subsurface soil or groundwater (vapor intrusion).

The potential for vapor encroachment or intrusion into structures in the Project Area are assessed from on-site or off-plant sources, based on the experience of the Environmental Professional. State and national policies and standards relevant to vapor intrusion are in flux, and subject to change.

The scope of services for ESA projects also does not include the completion of soil borings, the installation of groundwater monitoring wells, or the collection of soil or groundwater samples.

HDR has made certain assumptions in preparing the scope of this assessment:

- Data gathered from public information sources (i.e., libraries or public regulatory agencies) are accurate and reliable.
- Site operations reflect site conditions relative to potential releases, and no intentional concealment of environmental conditions or releases has occurred.
- Interview information is directly reported as gathered by the assessor, and is limited by the accuracy of the interviewee's recollection and experience.
- Published geologic information and site observations made by the environmental professional are used to estimate likely contaminant migration pathways in the subsurface. These estimates by the environmental professional are limited in accuracy, and are generally cross-referenced with existing information about similar sites and environmental releases in the area, if available.
- Regulatory information is limited to sites identified after the late 1980s, because reliable records were not kept by regulatory agencies prior to that time frame.

The findings and conclusions presented in this report are based on the procedures described in ASTM Practice E 1527-13, informal discussions with various agencies, a review of the available literature cited in this report, conditions noted at the time of this Phase I ESA, and HDR's interpretation of the information obtained as part of this Phase I ESA. The findings and conclusions are limited to the specific project and properties described in this report, and by the accuracy and completeness of the information provided by others.

An ESA cannot entirely eliminate uncertainty regarding the potential for RECs. Conducting this assessment is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a project area within reasonable limits of time and cost. In conducting its services, HDR used a degree of care and skill ordinarily exercised under similar circumstances by reputable members of its profession practicing in the same locality. This Phase I ESA conforms to the level of documentation required in ASTM Practice E 1527-13. However, HDR may omit discussion of certain records, i.e., sources deemed, in HDR's professional opinion, to be inapplicable, or of limited value, to the specific needs of the client. However, in accordance with ASTM, if the lack of available documentation results in a data gap, this data gap is identified and its significance is discussed.

1.3 User Reliance

HDR Engineering, Inc. (HDR) received authorization from both the J.R. Simplot Company (Simplot) and the U.S. Department of the Interior Bureau of Land Management (BLM) to conduct a Phase I ESA of the Project Area. The Project Area is defined as the Federal land, located in both Bannock and Power counties, Idaho, proposed for exchange from the BLM for non-Federal lands. This Phase I ESA has been prepared for Simplot and the BLM and only these two entities have the right to rely on the contents of this Phase I ESA without written authorization.

This Phase I ESA focuses on the Federal land (Project Area) that would be disposed of in exchange for non-Federal land. An assessment of the non-Federal land is available under different cover (*Phase I Environmental Site Assessment, Blackrock Land Exchange: Pre-acquisition of Non-Federal Land*, HDR 2019b).

2.0 Site Description

2.1 Location and Legal Description

The Project Area is described as the Federal land, comprised of one full unnamed parcel (made up of two non-contiguous areas) and a portion of another unnamed parcel in Bannock County, and two non-contiguous portions of Power County parcel RPD0419-02, all of which are BLM land, proposed for exchange in the Blackrock Land Exchange project. **Table 1** lists the Project Area Federal land.

The Project Area, comprised of approximately 711 acres, is an irregularly-shaped, non-contiguous block of land that extends through sections 17, 19, and 20 in Township 6 South, Range 34 East (T6S, R34E) in both Bannock and Power counties, near Pocatello, Idaho. Refer to the project vicinity map for the locations of both the Project Area and the non-Federal land proposed for exchange, and the detail map of the Project Area (**Figure 1** and **Figure 2**) for further site location details.

Table 1 – Description of Blackrock Land Exchange Federal Parcels

Federal Land Requested in Exchange for Non-Federal Land		
	Parcel ID*	**Township 6 South, Range 34 East**
Bannock County	No parcel ID (full parcel)	Section 17: Lots 3 and 4, SW¼NW¼, W½SW¼, and SW¼SE¼ 44a
	No parcel ID (partial parcel)	Section 20: W½NE¼, NW¼, N½NW¼SW¼, N½NE¼SW¼, and N½NW¼SE¼
Power County	RPD0419-02 (partial parcel)	**Township 6 South, Range 34 East** Section 19: Lot 5, NE¼, NE¼NW¼SE¼, and N½NE¼SE¼

* Parcel IDs and approximate acreages per Bannock County Assessor's website: https://bannock.maps.arcgis.com/apps/webappviewer/index.html?id=dfe86cb077844d8f8b68ba01ac6f7087 and Power County Assessor's website: http://idahoparcels.us:8060/gm3/desktop/power.html#on=sketch/default;scalebar_feet/scalebar_feet;parcels/parcels;boundry/boundry;openstreetmap/osm_mapnik&loc=152.8740565703525;-12562119;5279180

2.2 Site and Vicinity Characteristics

The Project Area is located west of Pocatello, Idaho in both Power and Bannock counties, on the northwest side of Howard Mountain (**Figure 2**). Howard Mountain is located in a boundary area between the Eastern Snake River Plain and the Bannock Range. Terrain is steep and mountainous, with soils ranging from shallow and rocky to deep and well drained. Elevations in this area range from 4,400 to 6,500 feet above mean sea level. Vegetation consists mainly of native shrub steppe type, with minimal juniper.

2.1 Area Geology and Hydrogeology

The Project Area is located at the northern end of the Bannock Range, at the Snake River Plain boundary. Pleistocene terrace deposits are present locally to elevations of 5,400 feet. Boulder gravels with interbedded silt and sand are present along the Portneuf Valley. The Bear River drainage was part of the Portneuf River drainage prior to 500-600,000 years ago (http://geology.isu.edu/Digital_Geology_Idaho/Module14/Link-etal_1999_FieldGuidePleistoceneLakesThatcherandBonneville-gsac4p15.pdf). Deposits of Starlight and Salt Lake Formations often underlie these terrace deposits and are exposed within and at the perimeter of the mountain ranges. In the Pocatello area, the Starlight Formation consists of fluvially-deposited tuff, ash-flow tuff, basalt, and breccia or conglomerate.

The Project Area receives approximately 12 inches of mean annual precipitation. Most of the precipitation occurs from March to May, with secondary peaks occurring during November and December. Temperatures in the region range from a mean daily low of 14.4 degrees Fahrenheit (°F) in January to a mean daily high of 88.0 °F in July.

Shallow groundwater flow direction in the area follows the contours of the terrain and moves toward the Portneuf River. Groundwater contour maps for the Eastern Michaud Flats (EMF) Superfund site

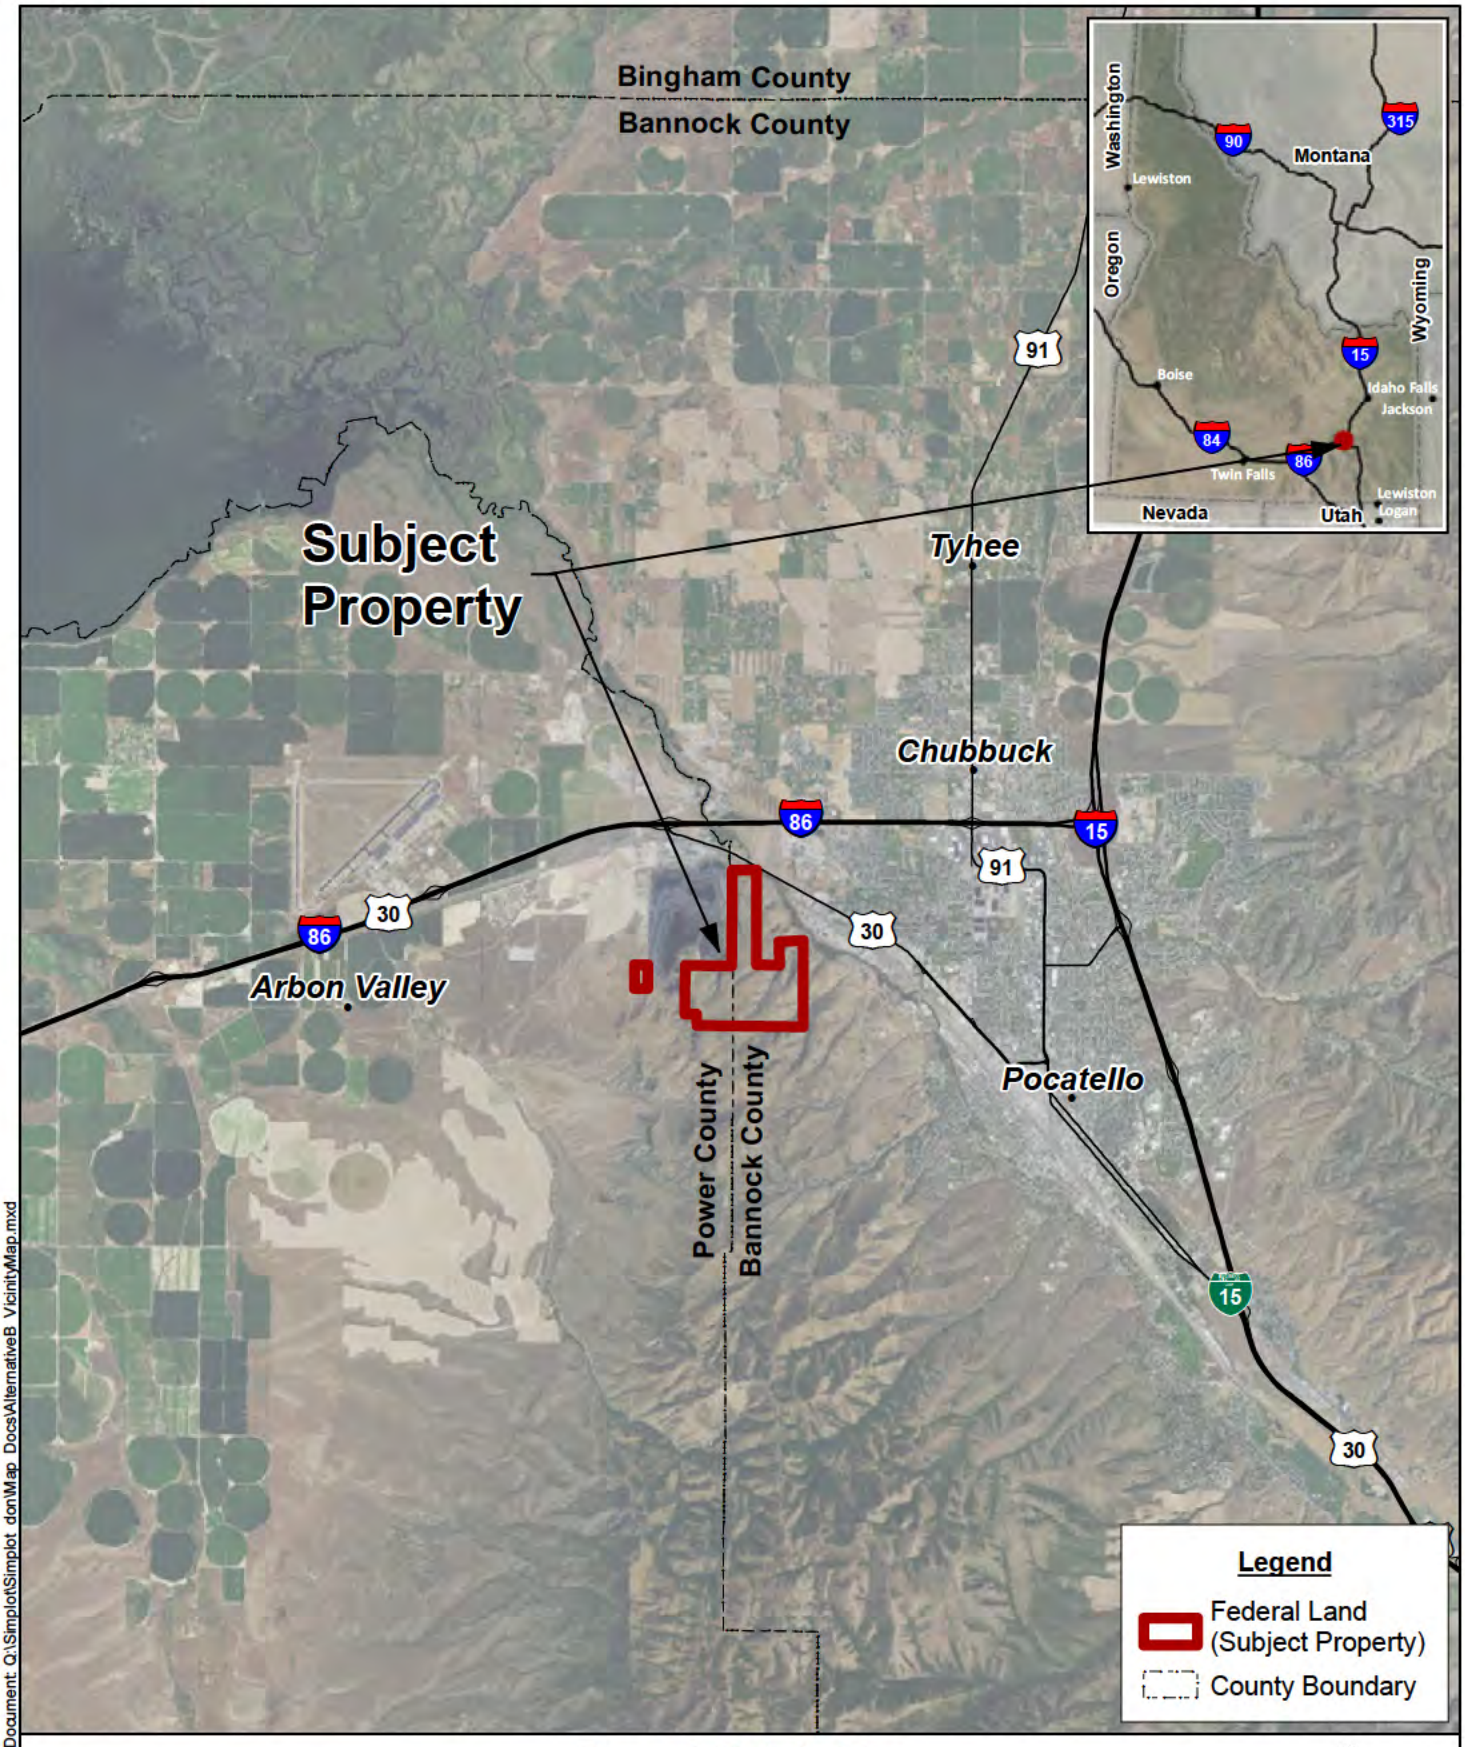

show groundwater north of the Project Area to flow in a northerly direction (similar to the terrain) and toward the Portneuf River.

2.2 Current Use of Property and Adjoining Properties

The land around the Project Area consists of a mix of industrial, residential, public and tribal uses. Fort Hall Reservation, belonging to the Shoshone-Bannock Tribes, dominates the area west of the Project Area. Immediately northwest of much of the Project Area is the EMF site. Simplot's Don Plant facility, which is directly north of the EMF site, is bordered to the north by both U.S. Highway 30 (US-30) and Interstate 86 (I-86). North of the interstate are several industrial and retail facilities, including Mickelsen Construction, Tesoro Logistics, Rowland RV and Boat Storage, and Idaho Rock and Sand. Undeveloped BLM land borders the Project Area to the south and southeast. A mix of BLM and non-Federal land is directly east as is Portneuf River. North of the river, sandwiched between US-30 to the south and I-86 to the north is a residential area.

2.3 Description of Structures, Roads, and Other Site Improvements

The Project Area is undeveloped and does not contain structures. Some fences exist in the areas, but the main site improvements are comprised of unpaved roads. For the Project Area, an unpaved road runs north-south through Section 17 of the area, crosses Section 20 of the area, and runs into Section 19. The nearest paved road to the Project Area is US-30 to the north.

3.0 User Provided Information

The users of the report are Simplot and BLM. As part of the AAI, the user has the following investigatory responsibilities:

- Provide searches for recorded environmental cleanup liens
- Report specialized knowledge of the subject property
- Evaluate the relationship of the purchase price to the value of the property, if not contaminated

BLM has indicated that no environmental cleanup liens are filed or recorded against the Project Area (Federal land). However, the Project Area is considered to be part of the Offplant OU associated with the EMF Superfund site. This issue is discussed in further detail in Section 4.3.6. Simplot has provided information, including specialized knowledge and experience related to the Federal land, including the record of decision (ROD) for their portion of the EMF Superfund site.

4.0 Records Review

4.1 EDR Database Search Results

HDR contracted Environmental Data Resources, Inc. (EDR) to complete a database search of Federal, state, and tribal environmental records for the Project Area. EDR performed the computerized search for the Project Area on January 30, 2020. The databases included Federal, state, local, and tribal databases as defined by ASTM E 1527-13, plus EDR proprietary databases as research aids. The results of the database search are summarized in **Table 2** and the following paragraphs. A complete copy of the EDR environmental database report is included in Appendix A.

Table 2 – Summary of Environmental Database Search Results

Database	Description	Listings in Project Area Land Search Radius	Listings of Concern to the Project Area
FEDERAL ASTM STANDARD			
CONSENT	Superfund Consent Decrees. Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites.	1	0
FUDS	Formerly used defense sites. Locations of FUDS properties where the U.S. Army Corps of Engineers is actively working or will take necessary cleanup actions.	1	1
Delisted NPL	National Priority List deletions. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.	1	0
NPL	The National Priorities List (NPL) is the U.S. EPA's database of uncontrolled or abandoned hazardous waste facilities that have been listed for priority remedial actions under the Superfund program.	1	1 (EFM)

Database	Description	Listings in Project Area Land Search Radius	Listings of Concern to the Project Area
ROD	Records of Decision mandating a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.	2	1 (EFM)
SEMS	SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the EPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites that are either proposed to or on the National Priorities List (NPL) and the sites that are in the screening and assessment phase for possible inclusion on the NPL.	1	1 (EFM)
US ENG Controls	A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.	1	1 (EFM)
US INST Controls	A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.	1	1 (EFM)
US MINES	Active Mines and Mineral Processing Plant operations for commodities monitored by the Minerals Information Team of the U.S. Geological Survey (USGS).	1	0
UXO	A listing of unexploded ordnance site locations.	1	1 (Project Area)
STATE and LOCAL ASTM STANDARD			
ALLSITES	Idaho's remediation database is a compilation of data on all the state and delegated federal remediation programs operated by the DEQ. Programs included are AST, Brownfield, Emergency Response (ER), General Remediation, LUST, Mining, Miscellaneous, RCRA, Solid Waste, UST and voluntary cleanup program (VCP).	9	1 (Project Area)
LUST	Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents.	2	0
TRIBAL			
INDIAN RESERV	Map of Indian administered lands that have an area equal to or greater than 640 acres.	1	0

HDR reviewed the listings identified within the database search area. Listings or sites of potential concern to the Project Area are identified in the last column of **Table 2** and described in further detail in the following bullets.

The EDR search of Federal, state, local, and tribal databases returned two properties that HDR identifies as potential concerns. The first is identified within the Project Area and the second is the adjacent EMF Superfund Site. Both are further described below.

4.1.1 Pocatello Moving Target Range

The Pocatello Moving Target Range just south of the Project Area, at latitude/longitude 42.877/-112.521, is identified in the Formerly Used Defense Sites (FUDs) database (program ID: F101D0119). The same location is also listed the unexploded ordnance (UXO) database. No other information is provided in the EDR database. The FUDS were (are) Federal lands that used by the Department of Defense (DOD). The FUDs database was established in 1986 for assessment and to determine if cleanup was necessary. Assessment and cleanup activities are led by the U.S. Army Corps of Engineers (Corps). The UXOinfo.com site list the site as a FUDS site but indicates that the history as "no data available." The BLM has no records about the FUDs activities (Anderson 2019). HDR obtained records from the Corps (provided through the IDEQ Pocatello office) regarding the Pocatello Moving Target Range (Appendix E). The land was used by the War Department in 1943 and 1944 as a moving target range over a 4,494 acre area (the exact locations remains uncertain but it included present day BLM-managed land in the Pocatello area, and likely included the Project Area). The Corps inspected the area in 1991 and found no hazards. The Corps concluded, "since no hazardous or toxic waste was discovered, this site is recommended for no further action."

4.1.2 Eastern Michaud Flats (EMF) Superfund Site

The EMF Superfund site is listed in several databases (NPL, SEMS, US ENG CONTROLS, US INST CONTROL, ROD, and PRP). Located mostly north and adjacent to the Project Area, it includes a former elemental phosphorus processing plant (former Astaris [also known as FMC Corporation] Elemental Phosphorus Plant) and the active Simplot Don Plant that manufactures phosphate fertilizer. See Section 4.3.6 for additional information.

4.1.3 Other EDR Listed Sites

McCarty's Pacific Hide & Fur Recycling Company is listed in several databases (SEMS, US ENG CONTROLS, US INST CONTROLS, RCRA NonGen/NLR, ROD, LEAD SMELTERS, FINDS, ECHO). However, following a cleanup consent decree, the site was delisted from NPL in 1999.

The remaining listings were not of concern to the Project Area based on factors such as distance, hydraulic gradient, geology, or clean-up status.

No sites were listed in the orphan summary (unmappable sites due to insufficient address information) listed the following sites within the buffer zone, adjacent to the Project Area.

4.2 Additional Regulatory Information

4.2.1 Online Sources

Using the Idaho Department of Environmental Quality's (IDEQ) online Waste Management and Remediation Division Facility Mapper (http://www.deq.idaho.gov/waste-mgmt-remediation/remediation-activities/facility-mapper/), HDR searched for the Project Area on February 7, 2020. No listings were found in the Project Area, but several were found nearby, including the FUDS listing and the EMFS site listings, consistent with the EDR report (see Section 4.1.1).

4.2.2 Agency File Reviews

See Section 4.2.1.

4.2.3 BLM Records

See Section 6.0 for interview with BLM personnel regarding BLM's knowledge and records of the Project Area.

4.3 Historical Use Information

The objective of reviewing historical use information is to develop a history of previous land uses at and in the vicinity of the Project Area, and to assess these uses for potential hazardous materials impacts that may affect the Project Area. HDR reviewed those historical sources that were reasonably ascertainable and likely to provide useful information, as defined by the ASTM standard.

4.3.1 Fire Insurance Maps

The Project Area is undeveloped land with no physical address. There is no Sanborn® Fire Insurance Map coverage.

4.3.2 Historical Aerial Photographs

Historical aerial photographs are valuable for the environmental assessor to review features of the Project Area and surrounding properties over a long period of time. HDR reviewed historical aerial photographs of the Project Area provided by EDR (Appendix B) for the following years: 1953, 1969, 1974, 1980, 1985, 1993, 2004, 2009, 2013, and 2017. EDR provided two photos per each year of coverage to ensure coverage of the entire area. **Figure 3** illustrates photographic coverage. Photo area 1 is focused on the western portion of the Project Area, while the photo area 2 is focused on the eastern portion of Project Area, though there is significant overlap between the two views. Because there is so much overlap, just one description of the area per year is provided below.

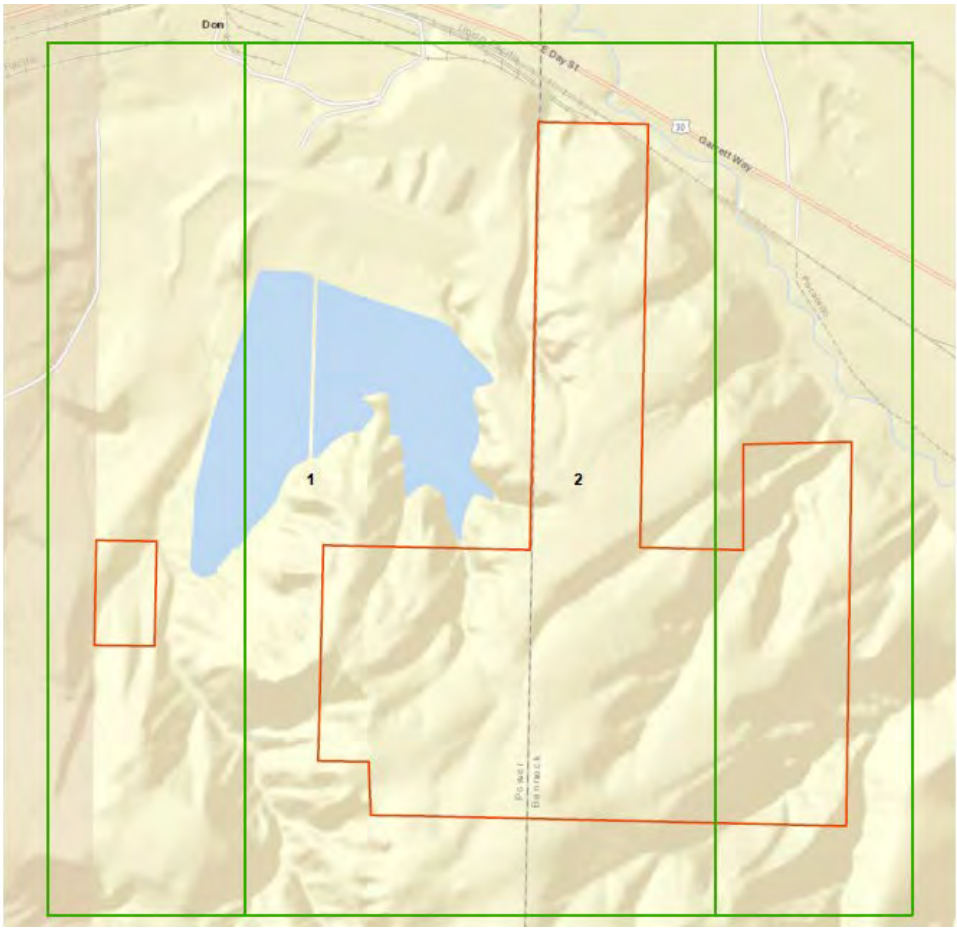

Figure 3. EDR Photographic Coverage

1953: The Project Area and surrounding area were undeveloped and mountainous. Two small structures were present on the Subject Property in the northeastern portion of the photo. US-30, train tracks, and Portneuf River are visible crossing through the northwest corner of the photo. Additional dirt roads were visible in the northern portion of the photograph. An industrial facility was visible in the northwest corner of the photo, north of the Project Area.

1969: The most apparent change from the 1953 photograph was the development of industrial waste ponds (gypsum stack) in the Simplot Don Plant site area, including on Fort Hall Reservation land. There were also several more roads visible in the area around the waste ponds.

1974: Photo resolution is poor, but the area north of the Project Area continued to develop associated with the Don Plant and FMC operations.

1980: The waste ponds and associated industrial facilities expanded in all directions adjacent to the Project Area.

1985: The area appeared mostly unchanged from the 1980 photograph.

1992-1993: The area was mostly unchanged from the 1985 photograph with the Don Plant and FMC facilities remaining active and the waste ponds (gypstack) continuing to expand.

2004: The area was mostly unchanged from the 1992-1993 photograph with the Don Plant and FMC facilities remaining active and the waste ponds (gypstack) continuing to expand.

2009: The area was mostly unchanged from the 2004 photograph with the Don Plant and FMC facilities remaining active and the waste ponds (gypstack) continuing to expand.

2013: The area was mostly unchanged from the 2009 photograph with the Don Plant and FMC facilities remaining active and the waste ponds (gypstack) continuing to expand. The waste ponds were significantly darker in areas, which may be an indication of increased depth.

2017: The configuration of the waste ponds and some of the associated facilities to the north did not change location, but changed configuration from all past photos. The waste ponds again were darker than in pre-2013 photographs. Two new, small areas of development associated with the ponds developed on the pond's east side.

4.3.3 Historical Topographic Maps

Historical topographic maps provide an overview of the area relative to potential previous land uses. HDR reviewed historical topographic maps of the Project Area provided by EDR. These maps served to augment information that was gathered in the historic aerial photograph review. The USGS 7.5-minute series topographic maps (Pocatello North, 1971; Pocatello South, 1971; Michaud Creek, 1971, Michaud, 1971; Pocatello South, 1974, Michaud, 1974; Michaud Creek, 1974; Pocatello North, 2013; Pocatello South, 2013; Michaud Creek, 2013; and Michaud, 2013) and the 15-minute series topographic maps (Michaud, 1934; Pocatello, 1937; Michaud, 1937) were reviewed, and are provided in Appendix C. The topographic maps show little change in the area over time, except that beginning in 1971, they show the locations of industrial waste ponds ultimately associated with the Simplot Don Plant and the FMC facility.

4.3.4 City Directory Information

There is no physical address for the Project Area; therefore, there are no search results available for the parcels in city directories.

4.3.5 Environmental Liens, Activity Use Limitations (AULs) and Additional Information

Per the Statement of Services assumptions (Section 1.2), no environmental lien search for the Project Area was conducted in support of this Phase 1 ESA. The EDR database (Appendix A), however, includes the following environmental lien databases:

- NPL Liens – Federal Superfund Liens - Federal Superfund Liens. Under the authority granted the EPA by CERCLA of 1980, the EPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. EPA compiles a listing of filed notices of Superfund Liens.

The Project Area is not listed in the database. In addition, EDR contains the following related databases to site institutional/engineering controls:

- LUCIS – Land Use Control Information System

- US ENG CONTROLS – Engineering Controls Sites List
- US INST Control – Sites with Institutional Controls
- INST Control – Idaho's institutional controls restricting list

The Project Area is not listed in these databases. However, the nearby EMF site is listed in both US ENG CONTROL and US INST Control.

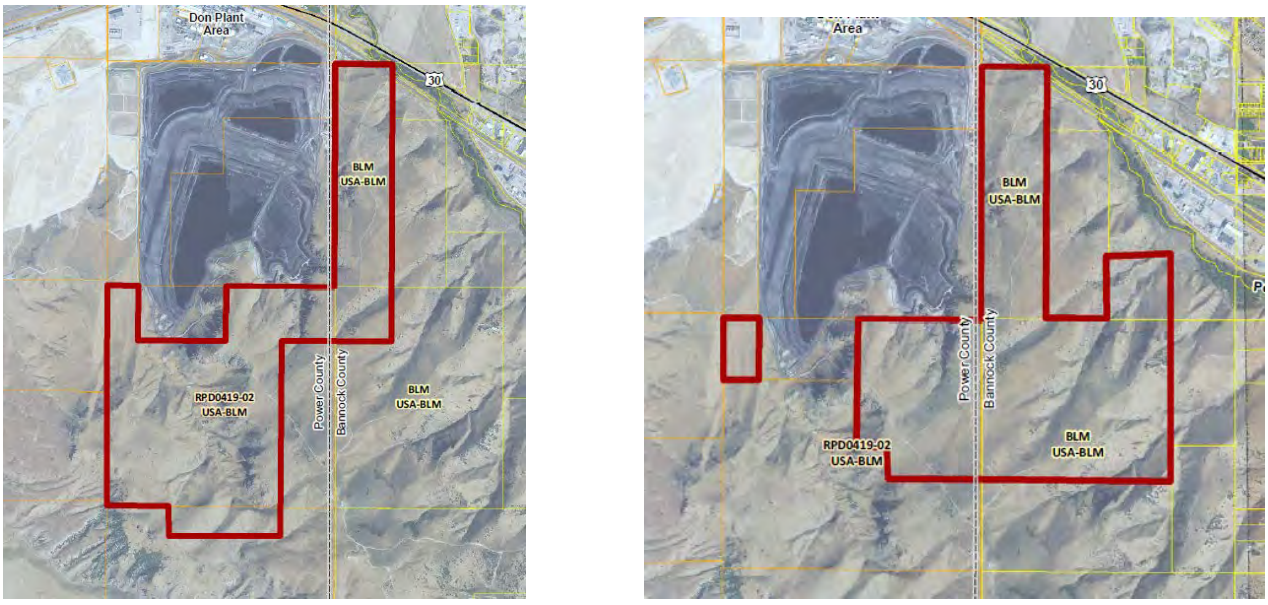

4.3.6 Summary of Previous Environmental Investigations

PREVIOUS PHASE 1 ENVIRONMENTAL SITE ASSESSMENTS

HDR conducted a Phase 1 ESA in 2009 and 2019 for the Pocatello office of the BLM that reviewed all but one of the same properties for a potential land exchange with Simplot.

- Phase I Environmental Site Assessment, Proposed Blackrock Land Exchange IDI-35337, November 2009
- Phase 1 Environmental Site Assessment, Blackrock Land Exchange: Disposal of Federal Land, September 2019

The two Phase I ESAs reviewed the history of Simplot's and BLM's efforts to complete a land exchange that ultimately date back to an initial proposal for a Blackrock Land Exchange from Simplot to BLM in 1994. The 2009 Phase 1 ESA was used to support an environmental assessment (EA) conducted by the BLM under the National Environmental Policy Act (NEPA). The 2019 Phase 1 supported an environmental impact statement (EIS) conducted by BLM. The Phase 1 ESA, presented herein, is for Alternative B for disposal of Federal lands. A comparison of the project areas for the 2019 (2009) and the Alternative B Phase 1 ESA is illustrated in **Figure 4.**

September 2019 (and 2009) Phase 1 ESA Area Alternative B Phase 1 ESA Area

Figure 4. Project Area Compared to Previous Federal Land Proposed for Disposal in 2019

The 2019 Phase I ESA, which also summarized the 2009 Phase 1 ESA, report the following (Federal land summary only):

- The Project Area is Federal land proposed for exchange in the Blackrock Land Exchange project, in Bannock and Power counties near Pocatello and Inkom, Idaho. The land around the Project Area consists of a mix of industrial, residential, public, and tribal uses. Fort Hall Reservation belonging to the Shoshone-Bannock Tribes dominates the area west of the Project Area. Immediately north of much of the Project Area is the EMF site. The EMF site is a CERCLA-regulated Superfund site comprised of Simplot's Don Plant facility and the previous FMC phosphorus plant.

- Review of government records and historical sources identified the Project Area as part of the EMF Superfund site, characterized as the Offplant Operating Unit (OU). Elevated levels of some metals and inorganics have been identified in surface soils. Elevated fluoride has been identified in vegetation. Superfund risk assessment identified no human health risk and marginal ecological risk due to fluoride in vegetation. No remedial action has been proposed by U.S. Environmental Protection Agency (EPA) for the Project Area.

- The Project Area at latitude/longitude 42.877/-112.521 is identified as the Pocatello Moving Target Range in the FUDs database (program ID: F101D0119). The same location is also listed in the UXO database. The FUDS are properties were (are) Federal lands that were used by the DOD. The FUDs database was established in 1986 for assessment and the Corps lead cleanup efforts where deemed necessary. The UXOinfo.com site list the site as a FUDS site but indicates that the history as "no data available." HDR obtained records from the Corps regarding the Pocatello Moving Target Range (Appendix E). The range was used by the War Department in 1943 and 1944 as a moving target range over a 4,494-acre area (the exact locations remains uncertain but it included current day BLM-managed land in the Pocatello area, and likely included the Project Area). Inspections were conducted in 1991, no hazards were identified. The Corps concluded, "since no hazardous or toxic waste was discovered, this site is recommended for no further action".

- In 2013, Simplot had a release of gypsum from a diked area and some gypsum entered onto BLM land near the southern end of the gypstack. Simplot reported the release and IDEQ oversaw the cleanup of the material. IDEQ considers the release mitigated.

5.0 Site Reconnaissance

5.1 Methodology and Limiting Conditions

HDR conducted a site reconnaissance of the Project Area by attempting to observe site conditions from accessible roads and walking areas that were accessible, while avoiding unsafe areas such as cliffs and steep terrain. HDR personnel also used binoculars to observe land features and used Google Earth to assess land surface features. Because of the large acreage involved, HDR's team did not physically walk all areas; however, HDR attempted to observe the entire acreage through visual observation, including viewing inaccessible areas through binoculars.

5.2 Observations

HDR accessed the Project Area on February 17, 2020, and again on March 2, 2020. In February, the site was snow covered and roads inaccessible (gate was locked, so HDR walked into the area).

Because of snow cover, HDR was not able to observe surface conditions. HDR accessed the site on March 2, but again found the area snow covered. HDR also conducted a site visit on June 11, 2019, for parcels illustrated in the figures in Section 4.3.6 (approximately 368 acres of the Alternative B was reviewed in June 2019).

The main roads for the area were walked and general observations made. Several BLM dirt roads cross the Project Area on the east side of the main canyon. HDR walked to the end of one of the dirt roads, approximately centered on the east side of the canyon, and looked into the canyon from the eastern edge. The reconnaissance team followed other roads on the east side of the canyon to get viewpoints into the canyon and into smaller draws away from the canyon. The team used binoculars to view distant locations for indication that further access was needed.

In addition for assessing the Project Area for ASTM defined RECs, the area was also assessed for solid waste and physical hazards, where BLM defines physical hazards are as follows:

> *Man-caused situations, such as mine shafts, high walls, unsafe bridges, primitive roads, or similar features, where the potential exists for injury or death to visitors on the lands before the disposal is completed* (BLM 2012).

Table 3 summarizes site observations. To the east of the Don Plant, there is a main dirt road that runs north-south as well as a couple of smaller roads that branch off (especially near the northern property boundary). At the northern end of the property, there is a circular dirt road coming off of the main road that branches off and gives access to the Simplot Don Plant (there is a gate across the road to mark the property boundary). Next to the road leading to the Simplot Don Plant was some wood debris (fence posts and pallets). Just south of the circular dirt road, are a couple of old posts sticking out of the side of the hill (see HDR 2019a for location map and photographs).

In addition, HDR observed the area surrounding latitude/longitude 42.877/-112.521 that is listed as the Pocatello Moving Target Range and was unable to identify any land disturbance that would suggest any type of target range in the area.

Table 3 – Summary of February 17 and March 2, 2020 Site Visit Observations

Feature	Comment/Observations[1]
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Project Area	Not observed.
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)	Not observed.
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use	Not observed.
Unidentified Substance Containers	None
Electrical or Mechanical Equipment Likely to Contain Fluids	None observed.
Interior Stains or Corrosion	No structures on-site.
Strong, Pungent, or Noxious Odors	None
Pools of Liquid	None
Drains, Sumps, and Clarifiers	None observed.
Pits, Ponds, and Lagoons	None
Stained Soil or Pavement	No soil staining observed.

Table 3 – Summary of February 17 and March 2, 2020 Site Visit Observations

Feature	Comment/Observations[1]
Stressed Vegetation	None.
Solid Waste Disposal or Evidence of Fill Materials	Snow covered hindered observations; however, based on past visits (June 2019): some trash, abandoned fencing and wood debris are present. Shoot gun shells found various locations along roads, but not in great concentrations (not considered to be a shooting range, rather random shooting).
Waste Water Discharges	No observed.
Wells	None observed
Septic Systems	Not observed.
Physical Hazards	No man-made hazards observed. The steep canyon walls are natural, but are considered hazards to humans.

[1] Project area was snow covered during site visits, therefore visual observations of surface were not possible.

Select photographs taken during site reconnaissance are included in Appendix D.

5.3 Solid Waste and Physical Hazards

As described in **Table 3**, some trash (paper, cans, bottles, and cigarettes), abandoned fencing and wood debris are present. No man-made physical hazards were observed in the Project Area.

5.4 Utilities and PCBs

A power line traverses the Project Area in a north-south direction near the middle of Section 19. According to EDR, this is a 345 kilovolt (kV) line. Another power line runs north-south approximately one-half mile from this one, and is identified by EDR as a 138 kV line. This second power line falls outside of the Project Area. No transformers were observed on the Federal land.

5.5 Vapor Intrusion Potential

According to EPA guidance, vapor intrusion is the general term for the migration of the vapor phase contaminants into buildings or structures. These contaminants are primarily volatile organic compounds (VOCs) and some heavy metals (mercury). These contaminants migrate from any subsurface contaminant source, such as contaminated soil or groundwater, through the soil and into an overlying building. The two general classes of VOCs that account for a large number of soil and groundwater contamination sites in the United States are petroleum hydrocarbons and non-petroleum hydrocarbon fuel additives, and chlorinated solvents (drycleaners and de-greasers).

The potential for vapor intrusion was evaluated for the Project Area. Based on the current and historical use of the Project Area, and the lack of VOC sources in the immediate vicinity, vapor intrusion is not considered to be of concern for the Project Area.

6.0 Interviews and Summary of Land Uses

6.1 Interviews

HDR conducted a phone interview with Mr. Bryce Anderson of the BLM on June 11, 2019, and a follow-up email on March 9, 2020. Mr. Anderson is the BLM project manager for the land exchange project and is familiar with land management and hazardous materials issues on BLM land in the Pocatello area. The following is a summary of the interview findings regarding the Project Area (Federal land):

- In 2013, Simplot had a release of gypsum from a diked area and some gypsum entered onto BLM land near the southern end of the gypstack. Simplot reported the release and IDEQ oversaw the cleanup of the material. IDEQ considers the release mitigated.
- Other than the gypsum release, Mr. Anderson is not aware of any RECs associated with the Project Area (Federal land) and is not aware of any reports on file at BLM indicating dumping or release of hazardous materials.
- Mr. Anderson did indicate that the Project Area has been impacted by Don Plant operations relating to air emissions and that the Project Area are part of the EMF Superfund site.
- Mr. Anderson was aware of the Army Corps of Engineers' FUDS database listing, but is unaware of any environmental issues at this location. He speculated that the Pocatello Moving Target Range may be from World War II training, but the BLM has no records regarding this activity at this location (see Section 4.1.1 and Appendix E for additional information).
- Mr. Anderson also reviewed BLM's Abandoned Mine Site Cleanup Module (AMSCM) database. He indicated the only feature within the Project Area that was recorded in the database consisted of the 2013 release of gypsum from a diked area.

On March 9, 2020, via email exchange, Mr. Anderson indicated that he is not aware of any additional land management or hazardous material issues on BLM land involve with Alternative B and no updates to the summary presented in the bullets above.

In addition, HDR interviewed Monty Johnson of Simplot. Mr. Johnson is familiar with Don Plant operations and in general familiar with land use of the Project Area. Mr. Johnson indicated he is not aware of any new RECs (since 2009) associated with the Project Area other than those identified as part of the 2009 Phase 1 ESA (relating to the EMF Superfund site). Mr. Johnson also described the gypsum release and that material has been cleaned up (see first bullet above).

6.2 Known Current and Past Uses of the Project Area and Adjoining Properties

Project Area (Federal land). The Project Area has been mainly undeveloped since at least 1937. A few unpaved roads traverse the site, mainly north-south through Section 17, across the northwest tip of Section 20, and into Section 19. There were two structures within right-of-way, IDI-00123, which consisted of a water reservoir and pipeline for the Union Pacific Railroad. BLM's case file shows that the right-of-way was issued on September 22, 1906. The case file does not contain any

correspondence to indicate when the reservoir and pipeline were constructed or removed. However, based on aerial photographs, the two structures were removed by 2004.

Adjoining North. The Simplot Don Plant abuts the Project Area to the north (Section 19) and to the west (Section 17) (**Figure 2**, Appendix A). Simplot has produced fertilizer products at the plant since 1944. This facility is still in operation. The gray un-vegetated area containing several ponds (slurry water containing gypsum) shown in **Figure 2** is Simplot's gypsum stack. Simplot completed installation of a synthetic liner over the gypsum stack consistent with the CERCLA ROD in 2018. The FMC facility, located to the northwest of the Project Area, produced elemental phosphorus from 1949 to 2001. FMC shut down the operation, and the buildings were demolished in 2001. These sites combined with some off-facility areas comprise the EMF Superfund site.

Adjoining East. The area adjoining the Project Area to the east has been mainly undeveloped since at least 1937.

Adjoining South. The area adjoining the Project Area to the south has been mainly undeveloped since at least 1937.

Adjoining West. For Section 19, the adjoining west property is undeveloped BLM land. The adjoining land to the west of Project Area in Section 17 is Simplot Don Plant property (**Figure 2**).

7.0 Recognized Environmental Conditions/ Historical Recognized Environmental Conditions

HDR has conducted a Phase I ESA of the Project Area (Federal land as part of a potential land exchange), located near Pocatello, Idaho. The ESA was performed in general conformance with the scope and limitations of ASTM Practice E 1527-13 and with BLM Manual Handbook H-2000-02. Any exceptions to, or deletions from, this practice are described previously in this report.

This assessment has revealed no evidence of RECs in connection with the Project Area. The adjacent EMF Superfund site, has impacted the Subject Property and may be classified as a CREC (see Section 1.1 for definition):

- The Project Area is located within the boundaries of the EMF Superfund site. The EMF site includes two phosphate ore processing plants - the Simplot Don Processing Plant, an operational phosphate fertilizer manufacturing facility, and the former Astaris Elemental Phosphorus Plant (also known as the FMC facility) and surrounding lands (the Offplant OU). Most of the FMC facility is located within the boundary of the Fort Hall Reservation on privately-owned fee land. Simplot's Don Plant is located on non-Federal, Simplot-owned land. The EMF site was listed on EPA's National Priority List on August 30, 1990. The site encompasses Onsite OUs for FMC and Simplot, and the Offplant OU as identified in the ROD issued by EPA in 1998. EPA negotiated a separate consent decree with Simplot for the Simplot Plant Operable Unit. A baseline ecological risk assessment conducted to evaluate potential effects of site related contamination on the natural environment found releases of contaminants from the EMF site on soils in the Offplant OU via movement in the air. Elevated

levels of several constituents have been identified above background levels, but not above reportable quantities in CFRs, in the soils and vegetation in the Project Area, and adjacent non-Federal and Federal land. These constituents include metals, radionuclides, fluoride and phosphorous. The Project Area is located within the Offplant OU of the EMF Superfund site. The ROD identifies the measures to be taken by Simplot and FMC to address site impacts. No remedial action has taken place in the past, nor has been proposed by EPA for the Federal land.

8.0 CERCLA 120(h)/40 CFR, part 373 Requirements for Notice

Whenever BLM enters into any contract for the sale or other transfer of real property on which any hazardous substance was stored for 1 year or more, known to have been released, or disposed of, the BLM must include in such contract notice of the type and quantity of such hazardous substance and notice of the time at which such storage, release, or disposal took place, to the extent such information is available on the basis of a complete search of the agency files.

As described in Section 4.3.6, contaminants are present in some vegetation and soils in the Offplant OU, which is part of the Project Area. The contaminants are attributed to deposition via air from the EMF Superfund site. Such contaminants are considered disposal and per BLM Manual Handbook H-2000-02, it is BLM policy that providing notice for disposal will be based on any amount of a hazardous substance.

The content of the notice must include (BLM Manual Handbook H-2000-02):

Table 4 – Content of Notice

Name of the Hazardous Substance	Chemical Abstracts Services Registry Number (CASRN)	Regulatory Synonym	RCRA Hazardous Waste Number	Reportable Quantity 40 CFR Part 302.4[a]	Quantity Disposed of at Site	Date(s) of Disposal
antimony	7440-36-0	None	NA	**	Unknown	1940s-present
beryllium	7440-41-7	None	P015	10 lbs (4.54 kg)	Unknown	1940s-2001
cadmium	7440-43-9	None	NA	10 lbs (4.54 kg)	Unknown	1940s-2001
vanadium		None			Unknown	1940s-2001
zinc	7440-66-6	None	NA	1000 (454)	Unknown	1940s-2001
polonium-210	Atomic Number 84	None	NA	0.01 Ci (3.7E 8 Bq)	Unknown	1940s-2001
fluoride		None			Unknown	1940s-present
chromium	7440-47-3	None	NA	5000 lbs (2270 kg)	Unknown	1940s-2001
lead	7439-92-1	None	NA	10 lbs (4.54 kg)	Unknown	1940s-2001
total phosphorous	7723-14-0	None	NA	1 lb (0.454 kg)	Unknown	1940s-present
selenium	NA	None	NA	**	Unknown	1940s-present

[a] Historical Air Emissions from Simplot and FMC phosphate ore processing plants that began operation in the 1940s. The FMC facility closed in 2001; the Simplot facility is still operational.

** Indicates that no RQ has been assigned to the generic or broad class

RCRA = Resource Conservation Recover Act; CFR = Code of Federal Regulations; lbs = pounds; kg = kilograms

Remedial Action: The ROD identified measures for Simplot and FMC to take to address site impacts in the Offplant OU. No remedial action has taken place in the Project Area and none has ever been proposed.

9.0 Findings and Conclusions

HDR has conducted a Phase I ESA of the Project Area, approximately 711 acres of Federal land (referred to as Alternative B) proposed for exchange in the Blackrock Land Exchange with BLM, near Inkom and Pocatello, Idaho. Simplot and BLM are requesting a Phase I ESA of the aforementioned properties for a potential exchange for non-Federal lands.

The Phase I ESA was performed in accordance with the scope and limitations of ASTM Practice E 1527-13 and BLM Manual Handbook H-2000-02. Any exceptions to, or deletions from, this practice are described previously in this report. Included in this Phase I ESA are a summary of the site reconnaissance conducted on February 17 and March 2, 2020, the review of the environmental database search report, historical data sources, and other records, and interviews with available personnel knowledgeable about the Project Area.

General findings of this assessment include the following:

- The Project Area is 711 acres of Federal land (referred to as Alternative B) proposed for exchange in the Blackrock Land Exchange project, in Bannock and Power counties near Pocatello and Inkom, Idaho. The land around the Project Area consists of a mix of industrial, residential, public, and tribal uses. Fort Hall Reservation belonging to the Shoshone-Bannock Tribes dominates the area west of the Project Area. Immediately north of much of the Project Area is the Eastern Michaud Flats (EMF) site. The EMF site is a CERCLA regulated Superfund site comprised of Simplot's Don Plant facility and the previous FMC phosphorus plant.
- Review of government records and historical sources identified the Project Area as being within the EMF Superfund site, characterized as the Offplant OU. Elevated levels, above background levels but not reportable quantities, of some metals and inorganics have been identified in surface soils. Elevated fluoride has been identified in vegetation. Superfund risk assessment identified no human health risk and marginal ecological risk due to fluoride in vegetation. No remedial action has been proposed by EPA for the Project Area.
- The Project Area at latitude/longitude 42.877/-112.521 is identified as the Pocatello Moving Target Range in the FUDs database (program ID: F101D0119). The same location is also listed in the UXO database. The FUDS are properties were (are) Federal lands that were used by the DOD. The FUDs database was established in 1986 for assessment, and if cleanup was deemed necessary, it was led by the Corps. UXOinfo.com site list the site as a FUDS site but indicates that the history as "no data available." HDR obtained records from the Corps regarding the Pocatello Moving Target Range (Appendix E). The range was used by the War Department in 1943 and 1944 as a moving target range over a 4,494 acre area (the exact locations remains uncertain but it included current day BLM managed land in the Pocatello area, and likely included the Project Area). Inspections were conducted in 1991, no hazards were identified. The Corps concluded, "since no hazardous or toxic waste was discovered, this site is recommended for no further action."

- In 2013, Simplot had a release of gypsum from a diked area and some gypsum entered onto BLM land near the southern end of the gypstack. Simplot reported the release and IDEQ oversaw the cleanup of the material. IDEQ considers the release mitigated.

10.0 Opinion and ASTM Statement

HDR has reviewed the stated data sources, which are part of the ASTM E 1527-13 assessment protocol. Based upon the review of the data, HDR has developed the following professional opinion and statement:

HDR has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527.13 and BLM Manual Handbook H-2000-02 for the Project Area. Any exceptions to, or deletions from, this practice are described in Section 11.0 of this report. This assessment has revealed no evidence of RECs in connection with the property, except for the following:

- The Project Area is located within the Offplant OU of the EMF Superfund site. The ROD identifies the measures to be taken by Simplot and FMC to address site impacts, including the Offplant OU. No remedial action has taken place in the past, nor has been proposed for the Federal lands, including the Project Area. This portion of the Project Area is considered a CREC.
- The area around latitude/longitude 42.877/-112.521 is listed in the FUDs database and is not considered a REC based on information provided by the Corps (see Appendix E).
- The release of gypsum from a diked area onto the Project Area has been mitigated and is not considered a REC.

11.0 Deviations

The ASTM E 1527-13 standards require a listing of “data gaps,” including data failure, encountered during the investigative process that may affect the validity of the conclusions drawn by the environmental professional. The ASTM E 1527-13: 12.7 standard also requires that the environmental professional estimate the relative importance of the data gaps. Generally, gaps in available data are related to the availability of historical data sources for specific sites of concern. The environmental professional uses multiple historical data sources as a method to provide coverage for data gaps. Historical information is collected on a recurring basis, and the passage of time between data sets may or may not constitute a significant gap in data coverage.

For this project, the following items may constitute a data gap or deviation from standard ASTM E 1527-13:

- Absence of Sanborn fire insurance maps
- Absence of city directory information
- The site reconnaissance was limited due to snow cover the Project Area.

The inability to obtain and review the Sanborn fire insurance maps and city directories do not present significant data gaps, because of the presence of other supporting historical information. Snow cover of the Study area is a data gap for this Phase 1 ESA. However, HDR conducted a site reconnaissance for much of the Project Area on June of 2019 (see map comparison in Section 4.3.6

of the 2019 Phase 1 and Alternative B. In addition, HDR reviewed Google Earth imagery of the Project Area (2019 image) to support this Phase 1 ESA.

13.0 Recommendations

Recommendations included in this report were developed through the investigative procedures described in the Scope of Services, Significant Assumptions, and Limitations sections of this report (see Section 1.2). These findings should be reviewed within the context of the limitations provided in the Limitations section.

Recommendation 1

This assessment has revealed no evidence of hazardous substances, petroleum products, or recognized environmental conditions and/or CERCLA 120(h) concerns on this real property. No further inquiry is needed for purposes of appropriate inquiry; therefore, this real property is suitable for disposal.

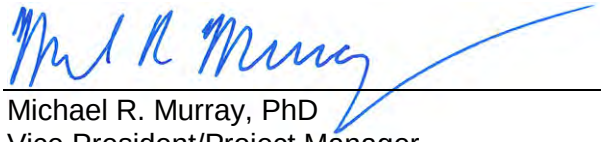

Recommendation 2

Report users should consider the “shelf life” of Phase I documents in determining risk. ASTM E 1527-13: 4.6 states that a conforming “Phase I” report is valid for a period of 180 days, and may be updated during the 180 days to 1-year timeframe. The report is valid for use in any of the CERCLA defenses ONLY if it is updated within this time frame. If greater than one year passes from the final report date, the Phase I effort would need to be repeated to remain in compliance with ASTM and the “All Appropriate Inquiry” protection.

14.0 Approvals

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in Section 312.10 of 40 Code of Federal Regulations [C.F.R.] Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the project area. We have developed and performed the all appropriate inquires in conformance with standards and practices set forth in 40 CFR Part 312.

Michael R. Murray, PhD
Vice President/Project Manager

15.0 Qualifications of Environmental Professionals

This Phase I ESA was performed by the following HDR personnel:

Mr. Michael R. Murray, Ph.D., HDR's qualified environmental professional, as defined by ASTM Practice E 1527-13, has 30 years of experience in ESAs, soil and groundwater investigations and remediation, wastewater/biosolids land application, wetland delineation and mitigation, statistical analysis and design, mine site closures, hazardous materials management, biological assessments, database management, research, project management, and teaching. Dr. Murray's responsibilities have included technical lead, project planning, field supervision, schedule and cost control, public relations, and expert witness support. He has conducted over 100 ESAs.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: Yes

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the

JACK B PARSON POCATELLO (Continued) **1000318048**

National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR SYNTHETIC MINOR
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Fiscal Year: 2013
Federal Facility ID: ID9799F3024
RAB: Not reported
NPL Status: Not Listed
Description: This 8,142.02-acre site is located 1 mile west of Pocatello, Idaho in Bannock and Power Counties. The Pocatello Moving Target Range was used exclusively for military training purposes. The site doesn't appear to have any improvements still standing on the site. Today, the majority of the area is privately-owned and is used for residential, agricultural and industrial purposes.
History: On 1 October 1943 and 15 March 1944, an aggregate 4,493.36-acres of Public Domain land were withdrawn from all forms of appropriation and reserved for use by the War Department as a moving target range. Additionally, during 1943-44, 3648.66 acres were leased from several private owners. No known permanent improvements are known to have been constructed on this site. In 1948, the land was excessed. Today, the land is almost entirely privately owned.

FINDS:

Registry ID: 110006164587

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
SUPERFUND NPL

PACIFIC HIDE & FUR RECYCLING CO. (Continued) **1009966947**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2019

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2019

Data Release Frequency: Quarterly

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ID SHWS: This state does not maintain a SHWS list. See the Federal CERCLIS list and Federal NPL list.

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by HDR were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

CENPD-PM-MP (200-1a)

17 DEC 1991

MEMORANDUM FOR

Commander, Walla Walla District (CENPW-PM), P.O. Box 602, City-County Airport, Walla Walla, Washington 99362-9265

Commander, U.S. Army Corps of Engineers, Huntsville Division, (CEHND-PM-E), P.O. Box 1600, Huntsville, Alabama 35807-4301

SUBJECT: Defense Environmental Restoration Program for Formerly Used Defense Sites (DERP-FUDS); Inventory Project Report (INPR), for Site F10ID011900, Pocatello Moving Target Range, ID

1. This memorandum approves the No Further Action (NOFA) recommendation for the subject site.

2. Request that:

a. CENPW, within 60 days of the date of this memorandum, notify the landowners(s) of the decision and provide copies of the notification letter(s) to CEMP-RF, CEHND-PM-E, and this office.

b. CEHND, file this INPR and update the inventory database.

3. The CENPD-PM-MP POC for this action is Mr. Moon-Yong Han, P.E., COM 503-326-3854.

REPLY TO
ATTENTION OF:

CENPW-EN-GB (200-1a) 17 September 1991

MEMORANDUM FOR Commander, North Pacific Division, ATTN: CENPD-PM-MP

SUBJECT: Defense Environmental Restoration Program-Formerly Used Defense Sites (DERP-FUDS) Inventory Project Report (INPR) for Site No. F10ID011900, Pocatello Moving Target Range, Idaho

1. This INPR reports on the DERP-FUDS preliminary assessment of the Pocatello Moving Target Range. The site visit was conducted on 10 and 11 September 1991. The site survey summary sheet and site map are forwarded as Enclosures 1 and 2.

2. Based on a historical records search, conversations with the current landowners, and a visit to the site, we have determined that the site was formerly used by the Army, and is therefore eligible for cleanup under DERP-FUDS. A Findings and Determination of Eligibility is enclosed (Enclosure 3).

3. Since no hazardous or toxic waste was discovered, this site is recommended for no further action (NOFA).

4. I recommend that you:

a. Approve and sign the Findings and Determination of Eligibility;

b. Approve this site for NOFA; and

c. Forward a copy of this INPR to Huntsville Division for the Preliminary Assessment File.

SITE SURVEY SUMMARY SHEET
FOR
DERP-FUDS SITE NO. F10ID011900
POCATELLO MOVING TARGET RANGE
SEPTEMBER 1991

SITE NAME: Pocatello Moving Target Range, Pocatello Idaho.

LOCATION: This site is located 1 mile west of Pocatello, Idaho Bannock and Power County, Idaho (see location map).

SITE HISTORY: This site was first acquired by the War Department in 1943 and 1944 for a moving target range. The Pocatello Moving Target Range was used exclusively for military training purposes. In 1943 and 1948, the Department of the Army relinquished to the U.S. Department of the Interior this aggregate 4,493.36-acre site. Today, the majority of the area is privately-owned and is used for residential, agricultural, and industrial purposes.

SITE VISIT: A site inspection was performed by William Harrison, CENPW-EN-GB, on 10 and 11 September 1991. During the site inspection, the land was found to have limited access primarily due to industrial and farm use along its borders. Areas of the property open to the public were littered and the roads were in poor condition. The industrial areas included two very large mining/milling operations. No public access was allowed in these areas. No evidence of any DOD use was noted on the site.

CATEGORY OF HAZARD: The inspection focused on the following hazards: CON/HTW, BD/DR, HTW, EO, PRP/HTW. No hazards identified.

PROJECT DESCRIPTION: No projects are proposed for this site.

AVAILABLE STUDIES AND REPORTS: None identified.

PA POC: Bill Harrison, 509-522-6767, FTS 434-6767, is the district POC.

DEFENSE ENVIRONMENTAL RESTORATION PROGRAM
FORMERLY USED DEFENSE SITES PROGRAM
FINDINGS AND DETERMINATION OF ELIGIBILITY

POCATELLO MOVING TARGET RANGE
SITE NO. F10ID011900

FINDINGS OF FACT

1. On 1 October 1943 and 15 March 1944, an aggregate 4,493.36-acres of Public Domain land in Power and Bannock Counties, Idaho, were withdrawn from all forms of appropriation and reserved for use by the War Department as a moving target range. Additionally, during 1943-44, 3,648.66 acres were leased from several private owners and a no-area railroad crossing permit was acquired, bringing the total amount of land in use to 8,142.02 acres.

2. Pocatello Moving Target Range was used for military training purposes during the period of Defense Department involvement. No permanent improvements are known to have been constructed on this site.

3. On 9 October 1943 and 20 December 1948, an aggregate 4,493.36 acres of Public Domain land were relinquished to the U.S. Department of the Interior. The no-area permit terminated on 1 August 1948 and, except for a 160-acre lease which terminated earlier in 1944, leases covering 3,488.66-acres were terminated between March and June 1948. No restrictions were cited. On 9 March 1948, Pocatello Moving Target Range received a Certificate of Clearance from T. B. Wheeler, Engineer, which stated that the site was clear of all dangerous and/or explosive materials. Today, the majority of the area is privately-owned and is used for residential, agricultural, and industrial purposes.

DETERMINATION

Based on the foregoing findings of fact, the site has been determined to be formerly used by DOD. It is therefore eligible for the Defense Environmental Restoration Program-Formerly Used Defense Sites established under 10 USC 2701, et seq.
